1 Executive Summary

- 1.1 This report tests the ability of a range of development types throughout Tower Hamlets and 14 Strategic Sites to viably meet the emerging planning policy requirements of the Tower Hamlets Draft Local Plan (September 2017) ('THDLP') and other pertinent local policies and guidance as well as national policies. The study tests the cumulative impact of the Council's emerging requirements, in line with the requirements of the National Planning Policy Framework ('NPPF') and the Local Housing Delivery Group guidance 'Viability Testing Emerging Local Plans: Advice for planning practitioners' (June 2012).
- 1.2 This study updates the Regulation 19 Planning Policy Viability Assessment produced by BNP Paribas Real Estate on behalf of the Council, published in September 2017.

Methodology

- 1.3 The study methodology compares the residual land values of a range of development typologies on sites throughout the borough to their value in current use (plus a premium), herein after referred to as 'benchmark land value'. If a development incorporating the Council's policy requirements generates a higher residual land value than the benchmark land value, then it can be judged that the Council's requirements will not adversely impact on viability.
- 1.4 The study utilises the residual land value method of calculating the value of each development typology. This method is used by developers when determining how much to bid for land and involves calculating the value of the completed scheme and deducting development costs (construction, fees, finance, sustainability requirements, Section 106 contributions, CIL¹ and developer's profit). The residual amount is the sum left after these costs have been deducted from the value of the development, and guides a developer in determining an appropriate offer price for the site.
- 1.5 The housing and commercial property markets are inherently cyclical and the Council is testing its proposed THDLP policies at a time when there is a degree of uncertainty due to the result of the EU Referendum. Notwithstanding this, residential values in Tower Hamlets have recovered strongly following the severe recession and now exceed the April 2008 peak levels by over 50%.² Forecasts for future house price growth indicate continuing growth in the 'mainstream' UK and East England markets. We have allowed for this by running a sensitivity analysis which varies the base sales values and build costs, with values increasing by 10% and costs by 5%. This analysis is indicative only, but is intended to assist the Council in understanding the ability of developments to absorb its requirements both in today's terms but also in the future. We have also tested a fall in sales values of 5%, to enable the Council to take a view on the impact of any adverse movements in sales values in the short term.
- 1.6 The viability analysis in this study provides a high level understanding of the viability of potential development sites in the context of the cumulative impact of the Council's emerging planning policies. It should be noted that some sites may require more detailed site and scheme specific viability analysis when they come forward through the development management process.

¹ Mayoral and Borough CIL indexed as appropriate.

² As identified from the Land Registry's online House Price Index database (<http://www.landregistry.gov.uk/public/house-prices-and-sales/search-the-index>)

Key findings

1.7 The key findings of the study are as follows:

- The results of this study are reflective of current market conditions, which are likely to change over the medium term. It is therefore important that the Council keeps the viability situation under review so that so that policy requirements can be adjusted should conditions change markedly. We have run our appraisals with growth in values and inflation on costs to reflect potential changes to viability on schemes to be delivered over the life of the plan. These results can be found in appendices 3, 4 and 5.
- We note that the purpose of this viability study is to support the Council's THDLP policies through Examination in Public by providing evidence to show that the requirements set out within the NPPF are met. That is, that the policy requirements for development set out within the plan do not threaten the ability of the sites and scale of that development to be developed viably. As an area wide study this assessment makes overall judgements as to viability in the Council's area and does not account for individual site circumstances and in this regard should not be relied upon for individual site applications. Section 2 of the Local Housing Delivery Group guidance, identifies that: *"The role of the test is not to give a precise answer as to the viability of every development likely to take place during the plan period. No assessment could realistically provide this level of detail. Some site-specific tests are still likely to be required at the development management stage. Rather, it is to provide high level assurance that the policies within the plan are set in a way that is compatible with the likely economic viability of development needed to deliver the plan."*
- Some development typologies tested were unviable in certain circumstances due to market factors, rather than the impact of the Council's proposed policy requirements and standards. These schemes are identified in the appraisals as being unviable at 0% affordable housing and base build costs and are generally in lower value areas, on sites with higher existing uses or as a result of higher costs given the nature of the scheme. These schemes will not come forward until changes in market conditions i.e. an improvement in sales values by comparison to build costs. In this regard their current unviable status should not be taken as an indication that the Council's requirements cannot be accommodated.
- We have tested the impact of the Council's strategic affordable housing policy targets (ranging between 35% to 50%) and other requirements (including Section 106 and CIL, SUDS, Accessibility and Zero Carbon). The results generated by these appraisals indicate that although many developments could viably provide all or a large majority of the policy requirements, in order to ensure the delivery of the required growth in the borough, particularly in the lower value areas, the flexible approach to the application of its policies (i.e. subject to viability) remains an important element. The results of this study identify that this approach will assist in ensuring that the majority of developments will be able to come forward over the economic cycle.
- Developments in the Borough are heterogeneous and scheme-specific viability will vary significantly. Our appraisals indicate that the Council's proposed strategic affordable housing target of 35% - 50% on sites providing net additional residential units, is supportable in many scenarios. There will however inevitably be a degree of negotiation when schemes come forward through development management due to scheme-specific factors that cannot be determined in a high-level assessment. This issue is, however, adequately addressed in the emerging Local Plan through specific measures in place in Spatial Policy S.H1 'Meeting Housing Need' which recognises that the actual amounts of affordable housing delivered on individual schemes may vary when scheme-specific viability issues emerge. The Council's approach to securing Affordable Housing in the emerging THDLP is therefore considered a reasonable position which will not put the scale of housing in the emerging plan at risk, providing the flexibility envisaged by policies i.e. subject to viability, follows through into the adopted plan. We note that the proposed approach is the same as that in the currently adopted Local Plan. Therefore the Council could stand to lose affordable housing from

schemes were they to reduce their existing affordable housing target as developers of schemes which could deliver higher levels of affordable housing would simply submit schemes offering levels of affordable housing at the new reduced threshold.

- With respect to the threshold of units where the requirement for the provision of affordable housing is triggered, the results in this study do not identify a natural split or indication of a threshold where affordable housing should or should not be sought. The results indicate that there is no direct correlation between the size of a scheme and its viability. Viability is determined by a range of elements including but not limited to, the density of the scheme, the build costs incurred, the level of the sales values achievable and of key importance the benchmark land value. The results therefore confirm that the Council is able to seek affordable housing on small sites i.e. under the 11 unit threshold, subject to viability.
- The base position appraisals tested assume a 70% 30% tenure split of rented and intermediate units in line with Policy D.H2 'Affordable housing' of which each element is split 50/50 Social Rent ('SR')/Tower Hamlets Living Rent ('THLR') and Shared Ownership ('SO')/London Living rent ('LLR') respectively. The sensitivity testing of the intermediate affordable housing tenures as part of this assessment has identified that viability can be seen to improve marginally where SO is sought in place of LLR. We therefore consider that the flexibility in Policy D.H2 with respect to the mix of tenure will allow the Council to be able to consider delivery of sites on a case by case basis over the life of the plan so that they are best able to address the housing needs in the borough.
- Vacant Building Credit ('VBC') is intended to provide incentives to developers to bring forward development on sites which are currently occupied by vacant buildings. Due to high sales values in the Borough and strong competition between developers for sites, incentives to reuse existing vacant sites are rarely if ever required. We consider that the VBC has the potential to adversely impact on the Council's ability to meet its affordable housing targets. The VBC is a blunt tool that does not appropriately deal with the viability of schemes in the Borough i.e. which in some instances goes too far and reduces the quantum of affordable housing from a scheme more than the viability of the scheme could deliver and in other instances might not go far enough in assisting a scheme with significant development complications. On this basis, we consider that the Council's approach in policies Spatial Policy S.H1 'Meeting Housing Need' and D.SG5 'Developer contributions' more appropriately ensure schemes provide the 'maximum reasonable' proportion of affordable housing on sites whilst ensuring deliverability of the scheme.
- When the cumulative effect of affordable housing and CIL, S106, SUDs, accessible units and sustainability requirements is tested on developments some schemes are able to accommodate marginally less affordable housing in certain scenarios (by a maximum of circa 5%). We would however highlight that the accessibility requirement is tested on all units in the scheme, whilst Policy D.H3 'Housing and Quality Standards' only requires the provision of 10% of homes to be wheelchair accessible'.
- BNP Paribas Real Estate further note that the technology and methods to deliver sustainability measures continues to be researched and developed. In line with recent trends and as widely acknowledged by the industry, such costs are likely to continue to reduce from current day costs in the future as new technology and methods of attaining sustainable development are discovered.
- Policy D.H2 'Affordable housing' identifies at part 5 (a) and (b) that, "Estate regeneration development schemes are required to: 'a. protect and enhance open space, community facilities and the existing quantum of affordable and family units; b. provide an uplift in the number of affordable homes'. Estate regeneration schemes are known to incur significant costs associated with site assembly and we also understand that the freehold of many estates have been transferred to RPs from the Council at 'nil value'. Thus every estate regeneration scheme will be unique and developments will continue to come forward in the borough with proportions of market housing included to cross subsidise the re-provision of the existing affordable housing on the estate. However, where this cross subsidy is not able to

deliver increased quantum of affordable housing, Policy S. H1 will enable developers and RPs to submit a viability assessment to support their case, as frequently happens on such sites. Clearly there will be a limit to the delivery of units on a site due to the constraints of bulk and massing and a site may not be able to provide enough additional private housing to support both the re-provision of existing units as well as up to 50% of the net additional homes as affordable units.

- We consider that in light of the acute need for more affordable units, the requirements of the Council's policies D. H2 and S. H1 for estate regeneration is reasonable and deliverable. The allowance for the consideration of viability on such schemes is vital as this enables frank discussions between the Council and RPs/developers on site and scheme specific issues considered on a case by case basis.
- As with conventional sale schemes our appraisals of PRS schemes indicate the affordable housing targets can be delivered in some circumstances and setting a lower target would not result in the optimum outcome in terms of total numbers of affordable units delivered. In light of this position and given the high need for affordable housing in the Borough and London, we consider that the Council's flexible policies (Strategic Policies S. H1 and D.SG5') which allow for schemes to be considered on a scheme-specific viability basis will ensure the delivery of PRS schemes in the borough, whilst still ensuring the maximum reasonable quantum of affordable housing is delivered in the range of appropriate housing developments coming forward.
- Our assessment of the 14 strategic sites has concluded that the large majority of the sites can viably deliver the THDLP's emerging policies. With regard to the small number of unviable sites we have undertaken viability testing to determine that the Council's emerging policies will viably allow all bar one of these sites to come forward. However with respect to this one site, it has been demonstrated that it is not the Council's policies that are rendering the site as unviable.
- The flexibility of the affordable housing policy facilitates consideration of site specific issues to ensure schemes they can come forward whilst delivering the maximum reasonable quantum of affordable housing (e.g. the scheme tested on Site 13 Millharbour South can viably deliver between 20% and 25% affordable housing). Further, some sites such as Site 2 Bow Common Gas Works and Site 11 Leven Road Gas Works may have significant abnormal costs associated with their redevelopment. Our assessment of Site 2 Bow Common Gas Works has identified that the scheme tested adopting our assumptions is deliverable as a wholly private scheme where a developer has sought to reduce the purchase price of the site to allow for the considerable decontamination costs likely to be required on the gas works site. This generates a surplus of £4.898 million which could fund the delivery of 0 -5% affordable housing. Alternatively, the land owner would undertake the works themselves recovering the costs through the sale of the site. On the basis of the same assumption, site 11 Leven Gas Works is identified as being able to deliver circa 25% affordable housing in conjunction with the Council's other policy requirements.
- Our testing of the impact of Policy D.EMP2, which requires major commercial and mixed use schemes to provide at least 10% of commercial space as "affordable workspace", on a number of the strategic sites has identified that this requirement can viably be accommodated.
- We appreciate that all sites and schemes will have different specific viability considerations, and this study demonstrates that the Council's flexible approach to applying its affordable housing and other policy requirements will ensure an appropriate balance between delivering affordable housing, sustainability objectives, necessary infrastructure and the need for landowners and developers to achieve competitive returns, as required by the NPPF. Maintaining this approach will lighten the 'scale of obligations and policy burdens' (Para 174 of the NPPF) to ensure that sites are, as far as if possible, able to be developed viably and thus facilitate the growth envisaged by the Council's plans throughout the economic cycle without jeopardising the delivery of the THDLP.

2 Introduction

- 2.1 This study has been commissioned by the London Borough of Tower Hamlets (“The Council”) to contribute towards an evidence base to inform the Council’s emerging Draft Local Plan. This report tests the ability of a range of development types throughout the Borough as well as 14 identified strategic sites to viably meet the existing local planning policy requirements and other pertinent local policies and guidance as well as national policies. The study tests the cumulative impact of the Council’s requirements, in line with the requirements of the National Planning Policy Framework (‘NPPF’) and the Local Housing Delivery Group guidance ‘Viability Testing Emerging Local Plans: Advice for planning practitioners’ (June 2012).
- 2.2 In terms of methodology, we adopted standard residual valuation approaches to test the impact on viability of the Council’s policies. However, due to the extent and range of financial variables involved in residual valuations, they can only ever serve as a guide. Individual site characteristics (which are unique), mean that conclusions must always be tempered by a level of flexibility in application of policy requirements on a site by site and scheme by scheme basis.
- 2.3 In light of the above we would highlight that the purpose of this viability study is to support the Council’s emerging policies through Examination in Public by providing evidence to show that the requirements set out within the NPPF are met. That is, that the policy requirements for development set out within the plan do not threaten the ability of the sites and scale of that development to be developed viably.
- 2.4 As an area wide study this assessment makes overall judgements as to viability within the London Borough of Tower Hamlets and does not account for individual site circumstances. The assessment should not be relied upon for individual site applications. Notwithstanding this, we note that some judgement has been made within this study with regard to the individual characteristics of the strategic sites tested. However the schemes tested on these sites are based on assessments of likely development capacity on the sites by the Council and in this regard they may differ from actual planning applications that will come forward on these sites and scheme specific testing may still be required at the point where they come forward.
- 2.5 This position is recognised within Section 2 of the Local Housing Delivery Group guidance, which identifies the purpose and role of viability assessments within plan-making. This identifies that: *“The role of the test is not to give a precise answer as to the viability of every development likely to take place during the plan period. No assessment could realistically provide this level of detail. Some site-specific tests are still likely to be required at the development management stage. Rather, it is to provide high level assurance that the policies within the plan are set in a way that is compatible with the likely economic viability of development needed to deliver the plan.”*

Economic and housing market context

- 2.6 The housing and commercial property markets are inherently cyclical. The historic highs achieved in the UK housing market by mid-2007 followed a prolonged period of real house price growth. However, a period of ‘readjustment’ began in the second half of 2007, triggered initially by rising interest rates and the emergence of the US subprime lending problems in the last quarter of 2007. The subsequent reduction in inter-bank lending led to a general “credit crunch” including a tightening of mortgage availability. The real crisis of confidence, however, followed the collapse of Lehman Brothers in September 2008, which forced the government and the Bank of England to intervene in the market to relieve a liquidity crisis.

- 2.7 The combination of successive shocks to consumer confidence and the difficulties in obtaining finance led to a sharp reduction in transactions and a significant correction in house prices in the UK, which fell to a level some 21% lower than at their peak in August 2007 according to the Halifax House Price Index. Consequently, residential land values fell by some 50% from peak levels. One element of government intervention involved successive interest rate cuts and as the cost of servicing many people's mortgages is linked to the base rate, affordability of repayments helped to boost demand for housing. This, together with a return to economic growth early in 2010 (see November 2016 Bank of England GDP fan chart below, showing the range of the Bank's predictions for GDP growth to 2019) meant that consumer confidence started to improve.

Source: Bank of England

- 2.8 During 2010 improved consumer confidence fed through into more positive interest from potential house purchasers. However, this brief resurgence abated with figures falling and then fluctuating in 2011 and 2012. The improvement in the housing market towards the end of 2012 continued through into 2013 at which point the growth in sales values improved significantly through to the last quarter of 2014, where the pace of the improvement was seen to moderate and continued to do so in 2015. In March 2016 BNP Paribas Real Estate considered that the buoyancy seen during 2015 would persist into 2016 to deliver average price growth of 4.7%. However, we highlighted downside risks in the form of the changing tax regime for buy to let investments and challenging economic conditions in some parts of the country. The regional economic implications of falling global demand in the manufacturing and oil sectors were also identified as likely to take its toll on house price growth in those exposed regions.
- 2.9 The referendum held on 23 June 2016 on the UK's membership of the EU resulted in a small majority in favour of exit. The immediate aftermath of the result of the vote was a fall in the Pound Sterling to a 31 year low and stocks overselling due to the earnings of the FTSE being largely in US Dollars. As the Pound dropped significantly this supported the stock market, which has since recouped all of the losses seen and is near the all-time highs. We are now in a period of uncertainty in relation to many factors that impact the property investment and letting markets. However there are tentative signs of improvement and resilience in the market. This includes The International Monetary Fund having revised its forecast for UK growth in 2016 on 4 October 2016 from 1.7% to 1.8%, thereby partly reversing the cut it made to the forecast shortly after the referendum (1.9% to 1.7%). However it further trimmed its 2017 forecast from 1.3% to 1.1%, which stood at 2.2% prior to the Referendum.

- 2.10 The UK's first official growth figures since the referendum result vote have been published and exceed initial estimates. Growth for Q3 according to the Office for National Statistics ('ONS') figures was 0.5%, higher than analyst's predictions of 0.3%. The ONS has highlighted that *"the pattern of growth continues to be broadly unaffected following the EU referendum"*. Initial expectations are that the better than expected GDP figures will deter the Bank of England Monetary Policy Committee from going ahead with any further or planned interest rate cuts. The Economy has slowed slightly from the Q2 figure of 0.7% and the pattern is a slightly unbalanced one with the only sector of the economy continuing to grow being the services industry at 0.8%.
- 2.11 The Chancellor, Phillip Hammond, noted that *"The fundamentals of the UK economy are strong and today's data show that the economy is resilient."* Data from the construction and manufacturing sector are on a continuing trend of stagnation and decline, with construction contracting by 1.4% and manufacturing 0.4%. It was expected that manufacturing would be bolstered by the fall in the value of the pound, however this has failed to materialise. Overall the figures are better than expected, however experts have warned that forecasts for 2017 are gloomier, as Britain begins the formal process of exiting the EU through the process of invoking article 50. Theresa May has announced that Article 50 will be triggered at the end of March (Q1) 2017, and any potential economic impacts of disengagement from the EU are likely to be deferred until the UK's future relationship with other EU countries is established. Nevertheless, the Bank of England's November Inflation report has increased the Bank's prediction for economic growth from 0.8% to 1.4% for next year, but cut the 2018 forecast from 1.8% to 1.5%. The revisions indicate that the Bank now thinks the impact of any potential exit from the EU will be felt later than expected.
- 2.12 The November Halifax House Price Index report indicates that house prices in the three months to October were 5.2% higher on average than the equivalent three months of 2015, with the annual rate of growth easing from 5.8% in October to 5.2%. Martin Ellis, the Halifax housing economist comments that, *"Annual house price growth has nearly halved from a peak of 10.0% in March this year, but remains robust at 5.2%. This expected slowdown appears to have been largely due to mounting affordability pressures, which have increasingly constrained housing demand. Whilst house price growth may ease further in the coming months, very low mortgage rates and a shortage of properties available for sale should help support price levels"*.
- 2.13 It is worth noting that Nationwide's chief Economist reported in Nationwide's October House Price Index that *"measures of housing market activity remain fairly subdued, with the number of residential property transactions c10% below the levels recorded in the same period of 2015 in recent months"*. He reflected that *"this weakness may still in part reflect the after-effects of the introduction stamp duty on second homes introduced in April, where buyers brought forward transactions to Q1 to avoid additional stamp duty liabilities (see chart below). Policy changes impacting the Buy to Let market may also be playing a role in dampening activity."*
- 2.14 We also note that Nationwide have reported that they consider *"the solid labour market conditions and historically low borrowing costs should provide support to buyer confidence. Moreover, the relatively low number of homes on the market and modest rates of housing construction are likely to keep the demand/supply balance fairly tight, even if economic conditions weaken in the quarters ahead, as most forecasters expect"*.
- 2.15 All sources we have recently reviewed support the view that the economic outlook is uncertain, and the five year outlook for housing value growth in the UK will be *"almost wholly dependent on the UK's terms of exit from the EU and the agreements that we manage to put in place"* (JLL Unchartered Territory Report (UK Research November 2016, UK Residential Forecasts)).

- 2.16 Savills identify in their Residential Property Focus Q4 2016 Report (published November 2016) that, *“The effect of Brexit is complicating a natural shift towards the later stages of the housing market cycle, when the strongest growth is seen beyond London and the South East. All regions are expected to see reduced house price growth as the economy slows.”* They suggest that negotiations on the terms of the UK’s exit from the EU are likely to be concluded by early 2019, which will bring *“to an end the two-year period of greatest uncertainty... As buyer confidence returns, low mortgage rates should mean there is capacity for a small bounce-back in house prices”*. Thus the consensus among analysts is that the UK housing market will be more subdued for the next two to three years, as uncertainty in the economy will begin to have a dampening effect on the levels of activity. JLL identify in their November report that, they consider that the housing market *“will remain reasonably active with little chance of meaningful price corrections”*.

Local housing market context

- 2.17 According to Land Registry as of September 2009, values had fallen in Tower Hamlets by circa 22.8% from the April 2008 peak of the market values. Subsequently values recovered steadily to April 2010, from which point values fluctuated within a 7% range until May 2013. From May 2013 average values have been seen to increase at a more rapid rate exceeding the April 2008 peak of the market value in October 2013. As of October 2016 residential sales values in Tower Hamlets were circa 52% higher than the April 2008 peak of the market values.
- 2.18 Tower Hamlets has seen very strong growth in sales values across the borough, where values have been seen to almost double since BNP Paribas Real Estate prepared the Council’s Community Infrastructure Levy (‘CIL’) viability report. Growth in values has resulted from a significant number of development schemes coming forward, regenerating the borough. Values in the city fringe, along the Thames and in Canary Wharf area also seen significant increases with a number of schemes achieving sales values in excess of £1,200 per sq ft. These areas are now considered part of the central London ‘prime market’. Growth in values in these areas has resulted in part from active interest from domestic and overseas investors.
- 2.19 The future trajectory of house prices is currently uncertain, although both Knight Frank and Savills’ and current predictions are that values are expected to increase over the next five years. They identify that the Mainstream London market will grow by 11% to 12.5% over the period between 2017 to 2021 inclusive, whilst the Prime Central London East/Prime Central London markets will grow by 15.9% to 21%. This is compared to a UK average of 13% to 14.2% cumulative growth over the same period.

Table 2.19.1: Savills’ house price forecasts for prime and mainstream London markets

London Markets	2017	2018	2019	2020	2021	Cumulative growth
Prime Central London - Savills	0.0%	0.0%	8.0%	5.0%	6.5%	21%
Prime Central London East - Knight Frank	1.0%	3.5%	3.0%	3.5%	4.0%	15.9%
Mainstream London - Savills	0.0%	3.0%	4.5%	2.0%	1.0%	11%
Mainstream London - Knight Frank	-1.0%	2.0%	2.5%	3.0%	5.5%	12.5%
UK - Savills	0.0%	2.0%	5.5%	3.0%	2.0%	13.0%
UK - Knight Frank	1.0%	2.5%	3.0%	3.0%	4.0%	14.2%

National Policy Context

The NPPF

- 2.20 The NPPF sets out the government’s planning policies including its preferred approach to meeting housing and employment requirements. The NPPF has subsequently been supplemented by the National Planning Practice Guidance (‘NPPG’).
- 2.21 The NPPF provides more in-depth guidance on viability of development than Planning Policy Statement 3, which limited its attention to requiring local planning authorities to test the viability of their affordable housing targets. The NPPF requires that local planning authorities have regard to the impact on viability of the cumulative effect of all their planning requirements on viability. Paragraph 173 of the NPPF requires that local planning authorities give careful attention “to viability and costs in plan-making and decision-taking”. The NPPF requires that “the sites and the scale of development identified in the plan should not be

subject to such a scale of obligations and policy burdens that their ability to be developed viably is threatened". After taking account of policy requirements, land values should be sufficient to *"provide competitive returns to a willing landowner and willing developer"*.

- 2.22 The meaning of a "competitive return" has been the subject of considerable debate over the past few years. For the purposes of testing the viability of a local plan, the Local Housing Delivery Group³ concluded that the current use value of a site (or a credible alternative use value) plus an appropriate uplift, represents a competitive return to a landowner. Some members of the RICS consider that a competitive return is determined by market value⁴, although there is no consensus around this view.

National Planning Practice Guidance

- 2.23 The National Planning Practice Guidance ('NPPG') stresses the need for evidence in viability to ensure that Local Plan vision and policies are realistic and provide *"high level assurance"* that plan policies are viable. Evidence should be proportionate and not every site needs to be tested.
- 2.24 The NPPG goes on to indicate that local planning authorities should consider the range of costs on development, including those imposed through national and local standards; local policies; the Community Infrastructure Levy; and potential Section 106 obligations.
- 2.25 The NPPG indicates that Local Plan policies should be tested using current costs and current values, and not based on *"an expectation of future rises in values at least for the first five years of the plan period"*.

Mayoral CIL

- 2.26 Tower Hamlets falls within Mayoral CIL Zone 2, where a CIL of £35 per square metre is levied.
- 2.27 Accordingly this study takes full account of Mayoral CIL indexed as appropriate to 2016 values, based on the All in Tender Price Index as required by the CIL Regulations (as amended)..

Tower Hamlets CIL

- 2.28 Tower Hamlets adopted its CIL Charging Schedule on 25 February 2015 and it came into effect on 1 April 2015. Table 2.28.1 below summarises the rates of CIL charged.

Table 2.28.1: CIL rates in the adopted Charging Schedule

Development Type	Proposed CIL Rate Per sq m (GIA) of Development			
	Zone 1	Zone 2	Zone 3	Large Allocated Sites
Residential	£200	£65	£35	Nil
Offices	City Fringe	North Docklands	Large Allocated Sites	Rest of Borough
	£90	Nil	Nil	Nil
Retail (Except Convenience Supermarkets/ Superstores and Retail Warehousing)	£70	£70	Nil	Nil

⁴ RICS Guidance Note: Financial Viability in Planning, August 2012

Development Type	Proposed CIL Rate Per sq m (GIA) of Development	
	Borough Wide, Except Large Allocated Sites	Large Allocated Sites
Convenience Supermarkets/ Superstores and Retail Warehousing	£120	Nil
Hotel	£180	Nil
Student Housing Let at Market Rents	£425	Nil
Student Housing Let at Below Market Rents	Nil	Nil
All other uses	Borough Wide	
	Nil	

- 2.29 We have allowed for the Council's CIL charges indexed as appropriate to 2016 values, based on the All in Tender Price Index as required by the CIL Regulations (as amended).

Local Policy context

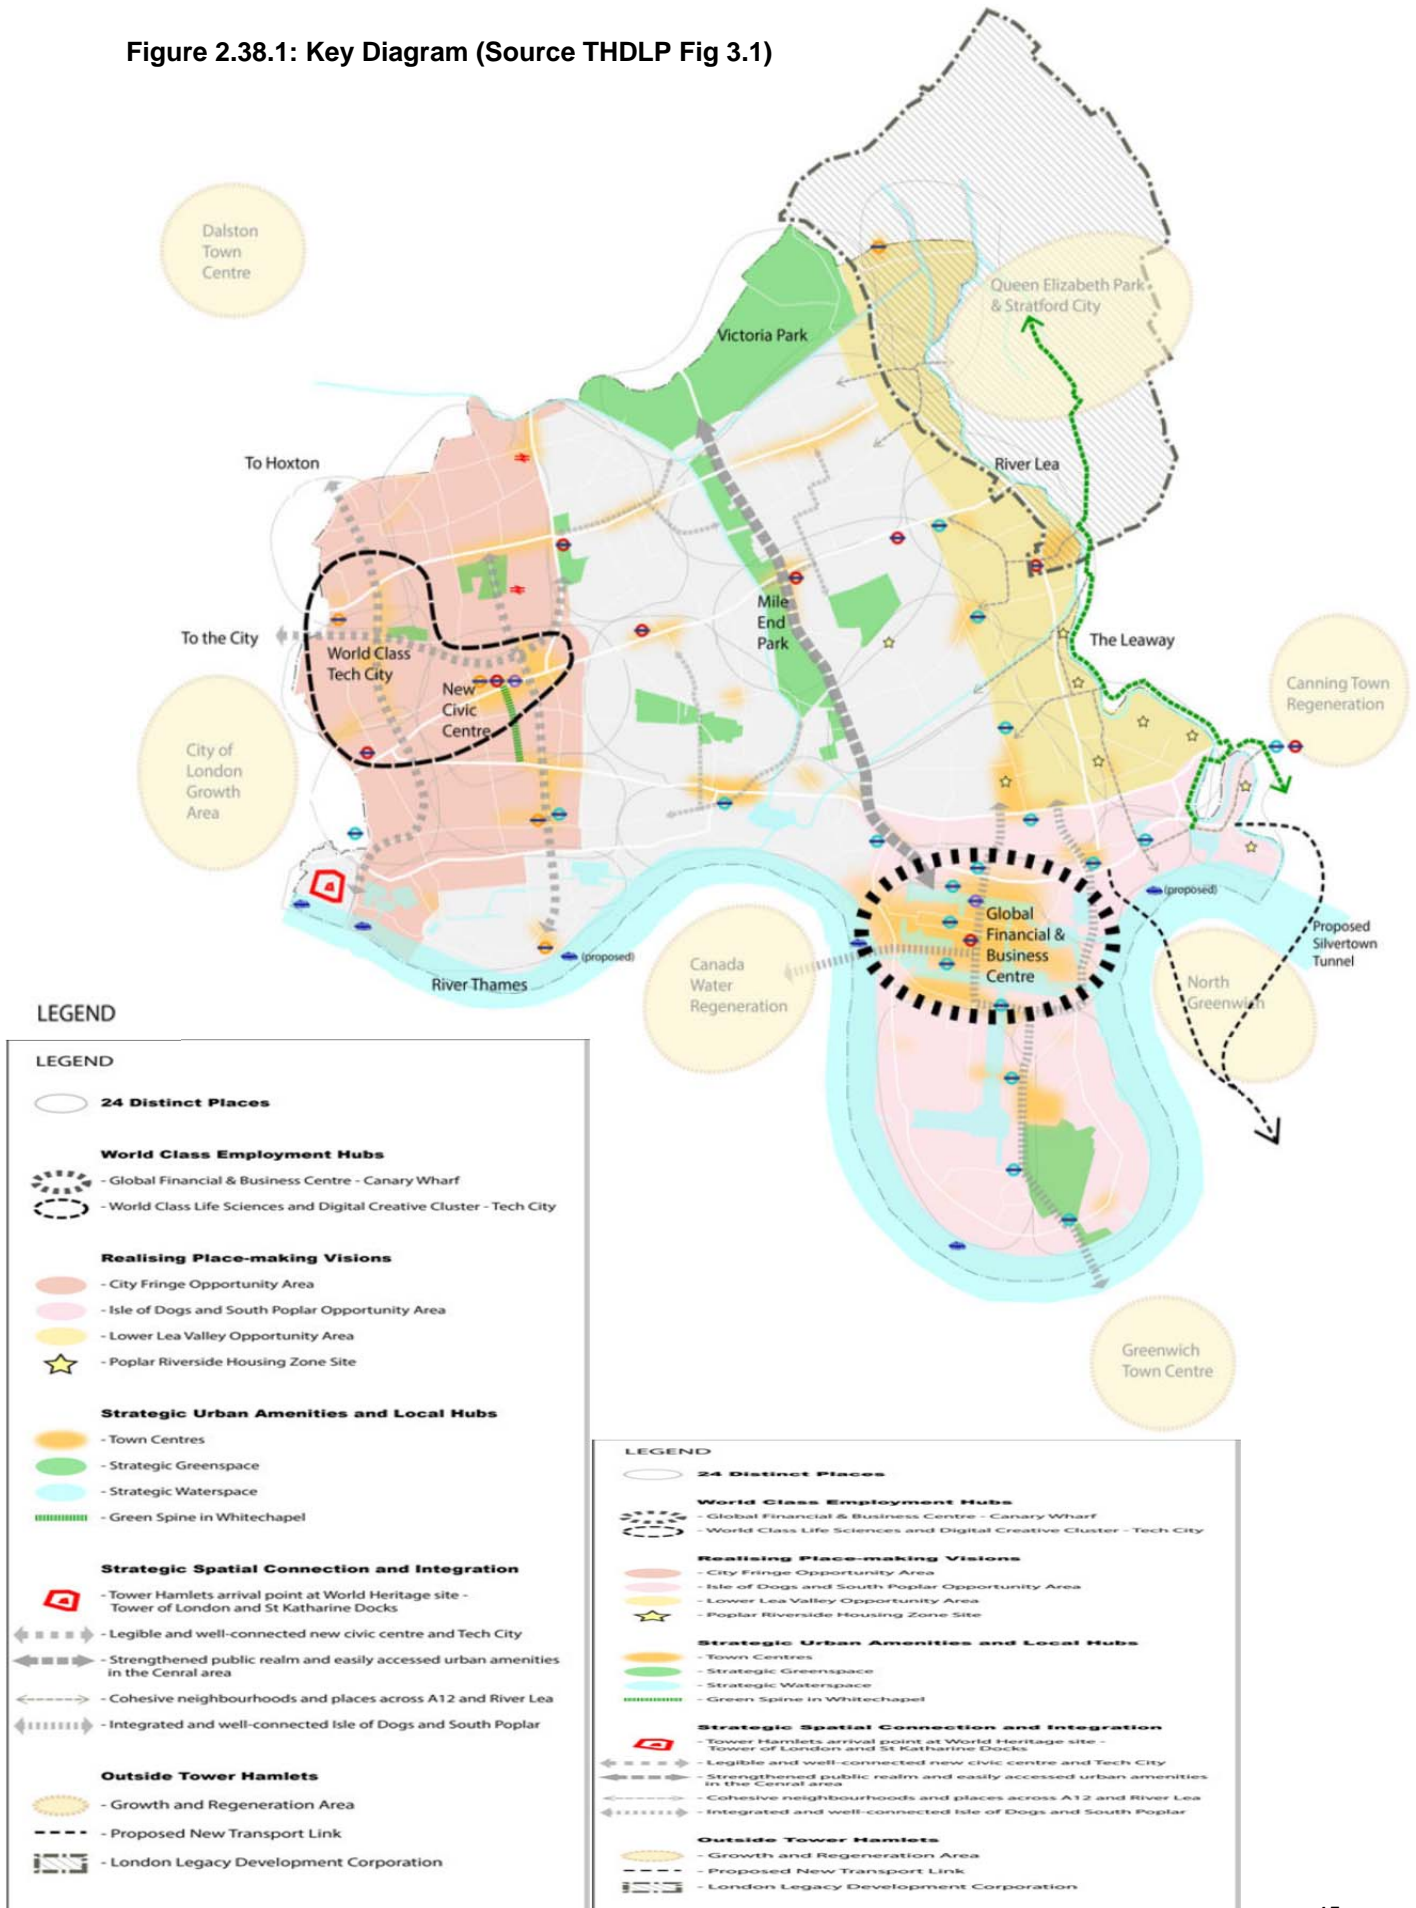

- 2.30 The study takes into account the emerging policies and standards set out in the Tower Hamlets Local Plan 2031, Managing growth and sharing the benefits, Regulation 19 Consultation document to be published in October 2017 ('THDLP'). These include *inter alia* affordable housing requirements; sustainability and developer contributions towards infrastructure. There are numerous policy requirements that are now embedded in base build costs for schemes (i.e. secure by design, landscaping, amenity space, internal space standards etc.). Therefore it is unnecessary to establish the cost of all these pre-existing policy requirements. **Appendix 1** summarises our analysis of the anticipated cost of new or amended policies/requirements in the THDLP document.
- 2.31 Therefore only the elements of the policy framework which are proposed to change and which have cost implications for developments will need to be tested.
- 2.32 In addition to CIL and financing infrastructure through residual Section 106 contributions (subject to pooling restrictions), the Council expects residential developments to provide a mix of affordable housing tenures to help meet identified housing needs. Strategic Policy S.H1 identifies that the Council's strategic target for affordable homes of 50% will be achieved by requiring a minimum of 35% affordable homes on sites providing net additional residential units (subject to viability). Policy D.H2 'Affordable housing' goes on to identify that the Council will seek to maximise affordable housing in line with Policy S.H1 and will require delivery of housing in accordance with a 70% Rent and 30% Intermediate tenure split.
- 2.33 The full list of policies in the THDLP has been summarised in **Appendix 1** identifying any which have cost implications for developments, however we set out below a list of the policies identified as having cost implications for developments:
- Policy D.SG5 – Developer contributions (sets out that requirements may include S106 agreements to make provisions to mitigate the impacts of the development and CIL and the Council's approach to the Vacant Building Credit ('VBC'))
 - Strategic Policy S.H1 – (sets out the strategic affordable housing target of 50% and identifies the minimum requirement for 35%-affordable homes on sites providing net additional residential units (subject to viability);

- Policy D.H2 - (requires the delivery of affordable housing in a 70% Rent and 30% Intermediate tenure split). It also requires developments for estate regeneration to protect the existing quantum of affordable homes and provide an uplift in the number of affordable homes.
- Policy D.H3 – Housing Standards and Quality (in particular accessibility requirements in line with the London Plan)
- Policy D.EMP2 – New employment space (seeks to secure at least 10% of new employment floorspace as affordable workspace within major commercial and mixed-use development schemes)
- Policy D.ES5 – Sustainable Drainage (specifies requirements for SUDs and attenuation on development sites).
- Policy D.ES7 – A Zero Carbon Borough (identifies the Council’s aspiration of achieving Zero Carbon development. From 2016 to 2019 a 45% CO2 emissions reduction from the 2013 building regulations is sought and Zero Carbon from 2019-2031 i.e. a minimum of 45% reduction of on-site with the remaining regulated carbon dioxide emissions to 100% to be off-set through a cash in lieu contribution for carbon saving projects elsewhere in the borough.)

Development context

- 2.34 Tower Hamlets is an inner London borough and sits in an important strategic location for London, linking central London with the rest of the Thames Gateway growth corridor. The THDLP identifies that the borough is the second most densely populated in London, and the townscape is evolving with the increase in density. Many areas have undergone significant change and regeneration, with a mix of redevelopment and restoration/adaption/reuse of buildings. In particular there has been a marked increase in the number of tall buildings, particularly residential ones, causing notable changes to the borough’s skyline, with positive and negative implications.
- 2.35 Developments in Tower Hamlets range from small in-fill sites to major regeneration schemes. The City Fringe and Canary Wharf are strategically important employment locations for London and are the location of the headquarters for a large number of multinational businesses so commercial development is important and strong within these key locations within the Borough.
- 2.36 The THDLP identifies that the 2015 Indices of Deprivation (DCLG, 2015) show that while Tower Hamlets has become relatively less deprived, deprivation remains widespread and the Borough also continues to have the highest rates of child and pensioner poverty in England (LBTH, 2016). However the borough also contains a number of wards which are within the least deprived in England. This disparity is reflected in the borough’s pay ratio which is the largest, reflecting the greatest inequality in London (London Poverty Profile, 2015).
- 2.37 Given the above it is unsurprising that there are significant variations in residential sales values between different parts of the Borough, with values in the City Fringe, wards along the River Thames and in Canary Wharf generally being the highest and the areas to the north east of the borough achieving lower values. Notwithstanding this position, values in the entire borough have seen significant growth in the last few years with the construction of new residential dwellings (building starts) in the borough exceeding the other London boroughs and the growth shows little signs of abating.
- 2.38 The THDLP identifies that *‘The London Plan (GLA, 2016) identifies a ten-year minimum housing supply target of 39,314 homes within Tower Hamlets over the period 2015-2025. This is equivalent to a minimum requirement of 3,931 homes per annum. The London Plan does not set out specific housing targets beyond 2025 but expects boroughs to ‘roll forward’ their annual target. The London Plan ten-year target, plus the annual rolled forward target, results in a housing supply target for the borough (2016 – 2031) of 58,965 homes.’*

Figure 2.38.1: Key Diagram (Source THDLP Fig 3.1)

3 Methodology

- 3.1 Our methodology follows standard development appraisal conventions, using locally-based sites and assumptions that reflect local market circumstances and emerging planning policy requirements. The study is therefore specific to Tower Hamlets and reflects the Council's planning policy requirements.

Approach to testing development viability

- 3.2 Appraisal models can be summarised via the following diagram. The total scheme value is calculated, as represented by the left hand bar. This includes the sales receipts from the private housing (the peach portion) and the payment from a Registered Provider ('RP') for the completed affordable housing units (the yellow portion). For a commercial scheme, scheme value equates to the capital value of the rental income after allowing for rent free periods and purchaser's costs. The model then deducts the build costs, fees, interest, Section 106 contributions, Community Infrastructure Levy ("CIL") and developer's profit. A 'residual' amount is left after all these costs are deducted – this is the land value that the Developer would pay to the landowner. The residual land value is represented by the red portion of the right hand bar in the diagram.

- 3.3 The Residual Land Value is normally a key variable in determining whether a scheme will proceed. If a proposal generates sufficient positive land value (in excess of existing use value, discussed later), it will be implemented. If not, the proposal will not go ahead, unless there are alternative funding sources to bridge the 'gap'.
- 3.4 Problems with key appraisal variables can be summarised as follows:
- Development costs are subject to national and local monitoring and can be reasonably accurately assessed in 'normal' circumstances. In boroughs like Tower Hamlets, the majority of sites will be previously developed. These sites can sometimes encounter 'exceptional' costs such as decontamination. Such costs can be very difficult to anticipate before detailed site surveys are undertaken;
 - Development value and costs will also be significantly affected by assumptions about the nature and type of affordable housing provision and other Planning Obligations. In addition, on major projects, assumptions about development phasing; and infrastructure required to facilitate each phase of the development will affect residual values. Where

the delivery of the obligations are deferred, the less the real cost to the applicant (and the greater the scope for increased affordable housing and other planning obligations). This is because the interest cost is reduced if the costs are incurred later in the development cashflow;

- While Developer's Profit has to be assumed in any appraisal, its level is closely correlated with risk. The greater the risk, the higher the profit level required by lenders. While profit levels were typically around 15% of completed development value at the peak of the market in 2007, banks currently require schemes to show a profit level that is reflective of current perceived risk. Typically developers and banks have been targeting between 17% to 20% profit on value of the private housing element dependant on the nature of the scheme. However, following the result of the EU referendum the market has started to reflect increased uncertainty through levels of profit at the higher end of this range.

- 3.5 Ultimately, the landowner will make a decision on implementing a project on the basis of return and the potential for market change, and whether alternative developments might yield a higher value. The landowner's 'bottom line' will be achieving a residual land value that sufficiently exceeds 'existing use value'⁵ or another appropriate benchmark to make development worthwhile. The margin above existing use value may be considerably different on individual sites, where there might be particular reasons why the premium to the landowner should be lower or higher than other sites.
- 3.6 Clearly, however, landowners have expectations of the value of their land which often exceed the value of the current use. Ultimately, if landowners' expectations are not met, they will not voluntarily sell their land and (unless a Local Authority is prepared to use its compulsory purchase powers) some may simply hold on to their sites, in the hope that policy may change at some future point with reduced requirements. It is within the scope of those expectations that developers have to formulate their offers for sites. The task of formulating an offer for a site is complicated further still during buoyant land markets, where developers have to compete with other developers to secure a site, often speculating on increases in value. However, landowner expectations and speculation on land values need to be balanced against the legitimate needs of communities which will accommodate new development, including the provision of infrastructure to support new residents.

Viability benchmark

- 3.7 The NPPF is not prescriptive on the type of methodology local planning authorities should use when assessing viability. The National Planning Practice Guidance indicates that the NPPF requirement for a 'competitive return' to the landowner will need to allow for an incentive for the land owner to sell and options may include "*the current use value of the land or its value for a realistic alternative use that complies with planning policy*" (Para 024; reference ID 10-024-20140306).
- 3.8 The Local Housing Delivery Group published guidance⁶ in June 2012 which provides guidance on testing viability of Local Plan policies. The guidance notes that "*consideration of an appropriate Threshold Land Value [or viability benchmark] needs to take account of the fact that future plan policy requirements will have an impact on land values and landowner expectations. Therefore, using a market value approach as the starting point carries the risk of building-in assumptions of current policy costs rather than helping to inform the potential for future policy*".

⁵ For the purposes of this report, existing use value is defined as the value of the site in its existing use, assuming that it remains in that use. We are not referring to the RICS Valuation Standards definition of 'Existing Use Value'.

⁶ Viability Testing Local Plans: Advice for planning practitioners, Local Housing Delivery Group, Chaired by Sir John Harman, June 2012

- 3.9 In light of the weaknesses in the market value approach, the Local Housing Delivery Group guidance recommends that benchmark land value “*is based on a premium over current use values*” with the “*precise figure that should be used as an appropriate premium above current use value [being] determined locally*”. The guidance considers that this approach “*is in line with reference in the NPPF to take account of a “competitive return” to a willing land owner*”.
- 3.10 The examination on the Mayor of London’s CIL charging schedule considered the issue of an appropriate land value benchmark. The Mayor had adopted existing use value, while certain objectors suggested that ‘Market Value’ was a more appropriate benchmark. The Examiner concluded that:
- “The market value approach... while offering certainty on the price paid for a development site, suffers from being based on prices agreed in an historic policy context.” (Para 8) and that “I don’t believe that the EUV approach can be accurately described as fundamentally flawed or that this examination should be adjourned to allow work based on the market approach to be done” (Para 9).*
- 3.11 In his concluding remark, the Examiner points out that:
- “the price paid for development land may be reduced [so that CIL may be accommodated]. As with profit levels there may be cries that this is unrealistic, but **a reduction in development land value is an inherent part of the CIL concept.** It may be argued that such a reduction may be all very well in the medium to long term but it is impossible in the short term because of the price already paid/agreed for development land. The difficulty with that argument is that if accepted the prospect of raising funds for infrastructure would be forever receding into the future. In any event in some instances it may be possible for contracts and options to be re-negotiated in the light of the changed circumstances arising from the imposition of CIL charges. (Para 32 – emphasis added).*
- 3.12 It is important to stress, therefore, that there is no single threshold land value at which land will come forward for development. The decision to bring land forward will depend on the type of owner and, in particular, whether the owner occupies the site or holds it as an asset; the strength of demand for the site’s current use in comparison to others; how offers received compare to the owner’s perception of the value of the site, which in turn is influenced by prices achieved by other sites. Given the lack of a single threshold land value, it is difficult for policy makers to determine the minimum land value that sites should achieve. This will ultimately be a matter of judgement for each planning authority.
- 3.13 Respondents to consultations on planning policy documents in Tower Hamlets and other local planning authorities in and out of London have made various references to the RICS Guidance on ‘Viability in Planning’ and have suggested that councils should run their analysis on market values. This would be an extremely misleading measure against which to test viability, as market values should reflect *existing policies already in place*, and would consequently tell us nothing as to how future (as yet un-adopted) policies might impact on viability. It has been widely accepted elsewhere that market values are inappropriate for testing planning policy requirements.
- 3.14 Relying upon historic transactions is a fundamentally flawed approach, as offers for these sites will have been framed in the context of current planning policy requirements, so an exercise using these transactions as a benchmark would tell the Council nothing about the potential for sites to absorb as yet unadopted policies. Various Local Plan inspectors and CIL examiners have accepted the key point that Local Plan policies and CIL will ultimately result in a reduction in land values, so benchmarks must consider a reasonable minimum threshold which landowners will accept. For local authority areas such as Tower Hamlets, the ‘bottom line’ in terms of land value will be the value of the site in its existing use. This fundamental point is recognised by the RICS at paragraph 3.4.4. of its Guidance Note on “Financial Viability in Planning”:

“For a development to be financially viable, any uplift from current use value to residual land value that arises when planning permission is granted should be able to meet the cost of planning obligations while ensuring an appropriate Site Value for the landowner and a market risk adjusted return to the developer in delivering that project (the NPPF refers to this as ‘competitive returns’ respectively). The return to the landowner will be in the form of a land value in excess of current use value”.

- 3.15 The Guidance goes on to state that *“it would be inappropriate to assume an uplift based on set percentages... given the diversity of individual development sites”.*
- 3.16 Commentators also make reference to “market testing” of benchmark land values. This is another variant of the benchmarking advocated by respondents outlined at paragraph 3.13. These respondents advocate using benchmarks that are based on the prices that sites have been bought and sold for. There are significant weaknesses in this approach which none of the respondents who advocate this have addressed. In brief, prices paid for sites are a highly unreliable indicator of their actual value, due to the following reasons:
- Transactions are often based on bids that ‘take a view’ on squeezing planning policy requirements below target levels. This results in prices paid being too high to allow for policy targets to be met. If these transactions are used to ‘market test’ CIL rates, the outcome would be unreliable and potentially highly misleading.
 - Historic transactions of housing sites are often based on the receipt of grant funding, which is no longer available.
 - There would be a need to determine whether the developer who built out the comparator sites actually achieved a profit at the equivalent level to the profit adopted in the viability testing. If the developer achieved a sub-optimal level of profit, then any benchmarking using these transactions would produce unreliable and misleading results.
 - Developers often build assumptions of growth in sales values into their appraisals, which provides a higher gross development value than would actually be achieved today. Given that our appraisals are based on current values, using prices paid would result in an inconsistent comparison (i.e. current values against the developer’s assumed future values). Using these transactions would produce unreliable and misleading results.
- 3.17 These issues are evident from a recent BNP Paribas Real Estate review of the differences between the value ascribed to developments by applicants and the amounts the sites were purchased for by the same parties. The prices paid exceeded the value of the consented schemes by between 52% and 1,300%.
- 3.18 For the reasons set out above, the approach of using current use values is a more reliable indicator of viability than using market values or prices paid for sites, as advocated by certain respondents. Our assessment follows this approach, as set out in Section 3.

4 Appraisal assumptions

- 4.1 We have appraised 9 development typologies, reflecting both the range of sales values/capital values and also sizes/types of development and densities of development across the borough. The Council have reviewed historic planning applications and have based the appraisal typologies on a range of actual developments within the borough. These typologies are therefore reflective of developments that have been consented/delivered as well as those expected to come forward in Tower Hamlets in future. Details of the schemes appraised are provided below in tables 4.1.1 and 4.1.2 below.

Table 4.1.1 Development typologies

Typology No.	Number of units	Housing type	Development density units per ha	Net developable area (ha)
1	3	Houses	100	0.03
2	6	Flats	350	0.02
3	10	Flats	235	0.04
4	11	Flats	235	0.05
5	25	Houses and flats	375	0.07
6	50	Flats	380	0.13
7	100	Flats	210	0.48
8	250	Flats	280	0.89
9	400	Flats	630	0.63

Table 4.1.2: Unit Mix (as identified in the SHMAA)

Unit Size	Market	London Living Rent / Intermediate	Social Target Rent / Tower Hamlets Living rent
1 bed	30%	15%	25%
2 bed	50%	40%	30%
3 bed	20%	35%	45%
4 bed		10%	15%
Total	100%	100%	100%

- 4.2 For typology 1 we have assumed 100% of the units are delivered as 3 bed houses and Typology 5 we have assumed that 10% of the 3 bed units are delivered as houses.
- 4.3 With respect to the size of units adopted in the study, these are set out in Table 4.3.1 below and have been informed by the minimum gross internal floor areas set out in Policy 3.5 and Table 3.3 of the London Plan Consolidated with Alterations since 2011 published in March 2016 and the DCLG's Technical Housing standards' nationally described space standard published in March 2015.

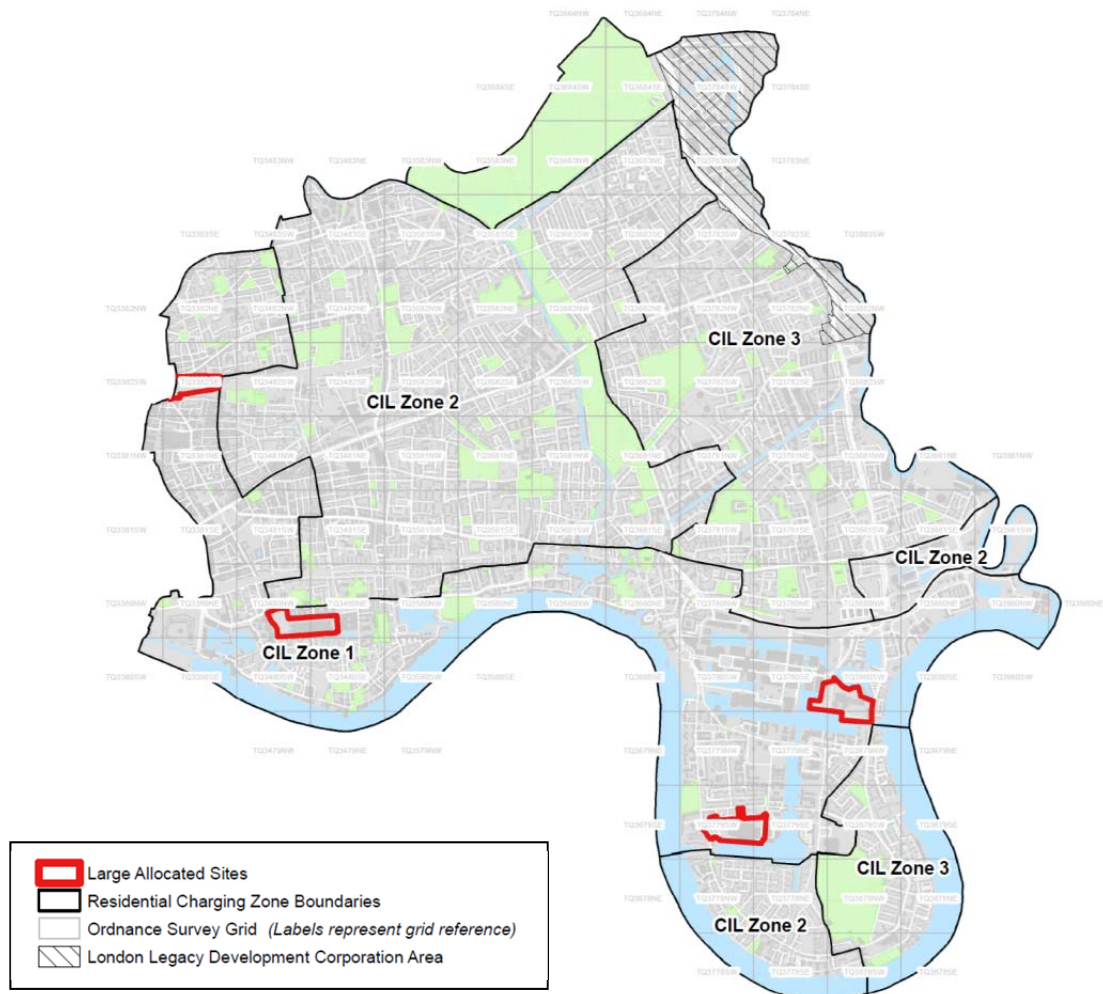

Table 4.3.1: Unit Sizes adopted in study

Unit type	1 Bed flat	2 bed flat	3 bed flat	4 bed flat	3 bed house
Unit size (sq m)	50	70	95	108	102

Residential sales values

- 4.4 Residential values in the area reflect national trends in recent years but do of course vary between different sub-markets. We note that since our March 2013 CIL Viability Report was published (with research undertaken in mid 2012), the Land Registry's database identifies that house prices in the borough have increased by circa 66%.
- 4.5 We have undertaken research on updated residential values in the borough using online database sources including Molior London, the Land Registry, Rightmove and discussions with active local agents. We also have an excellent understanding of values attributed to new build developments from viability work undertaken on behalf of the Council. We have considered all of this evidence of transacted properties in the area as well as properties on the market and pricing of new developments to establish appropriate values for testing purposes. This exercise indicates that in general, developments in the city fringe, Thames waterfront regions (such as St Katherine's docks and Wapping), Canary Wharf and docklands will attract average the highest sales values in the borough ranging from circa £8,342 per square metre (£775per square foot) to £12,917 per square metre (£1,200 per square foot). Lower values are generally achieved in the east of the borough, however in peripheral areas values of new build development have been seen to increase significantly over the last few years. We have tested high medium and low values for each of the three CIL Zones as illustrated in Figure 4.5.1 below.

Figure 4.5.1: CIL Zones

Source: LB Tower Hamlets Charging Schedule (adopted April 2015)

- 4.6 We have applied the following average sales values in our appraisals, reflecting the range identified in each of the CIL zones (see Table 4.6.1).

Table 4.6.1: Average sales values adopted in Tower Hamlets appraisals

Area	Ave values £s per sq m	Ave values £s per sq ft
CIL Zone 1 - High	£12,917	£1,200
CIL Zone 1 - Medium	£ 9,688	£ 900
CIL Zone 1 - Low	£ 8,342	£ 775
CIL Zone 2 - High	£ 9,149	£ 850
CIL Zone 2 - Medium	£ 8,073	£ 750
CIL Zone 2 - Low	£ 7,266	£ 675
CIL Zone 3 - High	£ 8,611	£ 800
CIL Zone 3 - Medium	£ 7,266	£ 675
CIL Zone 3 - Low	£ 6,189	£ 575

Affordable housing tenure and values

- 4.7 With respect to affordable housing, the Council’s Strategic Policy **S.H1** identifies that the Council’s strategic target for affordable homes of 50% will be achieved by requiring a minimum of 35% to 50% affordable homes on sites providing net additional residential units (subject to viability). Policy D.H2 ‘Affordable housing’ goes on to identify that the Council will seek to maximise affordable housing in line with Policy S.H1 and will require delivery of housing in accordance with a 70% Rent and 30% Intermediate tenure split. The supporting text at paragraph 4.18 identifies that the plan:

“... sets a target of achieving 50% affordable homes through private development as well as council-led initiatives. This target is considered to best reflect local housing need. On developments that yield 11 or more net additional residential units, at least 35% of affordable housing is expected. Developments are expected to maximise the provision of affordable housing, having regard to availability of public subsidy, implications of phased development (including provision for re-appraising scheme viability at different stages of development) as well as financial viability. Affordable housing calculations will be made using habitable rooms. Given the extent of local need, it is considered necessary and appropriate to seek financial contributions towards the provision of affordable housing from sites of less than 10 units. Financial contributions will be calculated using our preferred methodology as set out in the Planning Obligations Supplementary Planning Document. Over the plan period, developments on small sites have the potential to contribute over 3,000 new homes and could make a significant contribution towards meeting local affordable housing need (see appendix 7). Financial contributions will be calculated using a sliding-scale target starting at 3.5% across the whole site and increasing to 3.5% for each additional home, reaching 35% for sites of 11 units of more. Further detail (including on financial viability assessments) is provided in the developer contributions policy (D.SG5) and in the latest Planning Obligations Supplementary Planning Document. Policy S.H1 also requires ‘a mix of housing sizes and tenures on all sites providing new housing’ and further supports ‘a variety of housing products in the market and affordable tenure’.”

- 4.8 Policy D.H2 ‘Affordable housing’ sets out that the Council will seek to “maximise the provision of affordable housing in accordance with a 70% rented and 30% intermediate tenure split.” The supporting text in paragraphs 4.28 and 4.29 identify that:

“4.28 Where the development provides up to 35% affordable housing, as per policy S.H1 above, the affordable housing provision should be comprised of:

- 70% rented element, of which 50% should be London affordable rents and 50% should be Tower Hamlets living rent; and
- 30% intermediate element, which can include London living rent, shared ownership and other intermediate products.

4.29 *Larger intermediate units (3 or more bedrooms) should be prioritised as London Living Rent products, and generally, shared ownership will not be considered appropriate where unrestricted market values of a unit exceed £600,000 (as per the Affordable Housing and Viability Supplementary Planning Guidance [GLA, 2016]). Where the development provides more than 35% affordable housing, the tenure of the additional affordable homes will be subject to negotiation. GLA developed products (including the London Affordable Rent and London Living Rent) may be subject to change over the plan period. Our affordable housing service will provide further guidance on suitable products when assessing applications. Rent levels are determined as part of the viability assessment of each planning application and undertakings are made to retain similar rent levels at the point of completion. The ownership of affordable homes must be transferred to one of our approved local registered providers or other approved affordable housing providers.”*

- 4.9 The Council have identified that given the identified need in the borough they require forthcoming applications to split the 70% rented affordable element between SR and THLR. These will be equally split 50/50 between all unit sizes.
- 4.10 With respect to the 30% intermediate units, the Council has indicated that they are willing to be flexible on these units and have requested that three options of this provision be tested as follows:
- 50% LLR and 50% SO;
 - 100% SO; and
 - 100% LLR.
- 4.11 We set out in Table 4.11.1 the weekly rents for Social Rent (based on London Affordable Rent ('LAR')), Tower Hamlets Living Rent and London Living Rent adopted in our appraisals, which were the rents as at the point of gathering appraisal input data for this study. We understand that moving forward 2017/2018 values will apply as identified in Table 4.11.2 below.

Table 4.11.1 Social Rent (based on London Affordable Rent), Tower Hamlets Living Rent and London Living Rent weekly rents adopted in appraisals

- 4.12 We have used our bespoke model to value the affordable housing, which replicates how RPs undertake such appraisals. This model runs cashflows for the rented tenures in the borough over a period of circa 35 years which capitalises the net rental income stream. With respect to the social rented accommodation the model calculates the gross rent for these properties derived from a combination of property values (as at January 1999). The net rent is then calculated by taking into account factors such as: standard levels for individual registered providers (RP's) management and maintenance costs; finance rates currently obtainable in the sector; allowances for voids and bad debt.
- 4.13 In the July 2015 Budget, the Chancellor announced that RPs will be required to reduce rents by 1% per annum for the subsequent four years. This has reduced the capital values that RPs will pay developers for completed affordable housing units. At this stage, it is unclear whether this requirement will roll forward beyond the four year period 2015/16 to 2018/19. Our model accounts for this by reducing rents in years 1 to 4, which is a cautious assumption and assumes that the restriction will remain in place in perpetuity for rented accommodation in this study.
- 4.14 The CLG/HCA 'Shared Ownership and Affordable Homes Programme 2016 to 2021 – Prospectus' document clearly states that Registered Providers will not receive grant funding for any affordable housing provided through planning obligations. Consequently, all our appraisals assume nil grant. We note that the Government's 2016 Autumn Statement identified that the Government would "invest of a further £1.4 billion to deliver 40,000 additional affordable homes" and that they "will relax restrictions on government grant to allow a wider range of housing-types". However, we consider that the proposed sum is unlikely to achieve the delivery of 40,000 new homes as suggested given the increase in sales values since 2010 (i.e. when such grant was last available to fund all tenures of affordable housing). In addition we are aware that the GLA's Draft Affordable Housing and Viability SPG 2016 identifies that, "To enable the delivery of more affordable homes the Mayor will make funding available to increase the proportion of affordable homes above that which is viable on a nil-grant basis. Funding will be available on a tariff basis, details of which are set out in the Mayor's Homes for Londoners: Affordable Homes Programme 2016-21." BNP Paribas Real Estate is of the opinion that any grant funding will now have to work harder to achieve the same outcome that would have been possible in 2010 and therefore is unlikely to be available on all schemes. On this basis we have assumed no grant is available in the testing undertaken. Notwithstanding this we recommend that the Council revisits this assumption in future viability reviews.
- 4.15 For shared ownership units, we have assumed that RPs will sell 25% initial equity stakes and charge a rent of 2.75% on the retained equity. A 10% charge for management is deducted from the rental income and the net amount is capitalised using a yield of 5%.

PRS

- 4.16 We have tested typologies 6, 7 and 8 (50, 100 and 250 unit schemes respectively) set out in section 4.1 above, delivered as PRS schemes. We have adopted the rents as set out in table 4.16.1 below following research into rents achievable in PRS schemes in the area using the Moliar London database and our knowledge of viability of PRS schemes coming forward in the area. These rents have been capitalised at a net yield of between 3.25% and 3.75%, in line with market research published by Knight Frank⁷ and CBRE⁸. As we have adopted a net yield we have included an allowance of 25% for running costs (i.e. this accounts for the costs of maintenance, lettings management, repairs, void periods, insurance, utilities and replacement of fixtures and fittings etc.), which we consider to be a conservative allowance as in our experience this figure can be lower. As with the private sale unit typology scenarios we have tested these schemes with varying degrees of affordable housing provided as SR (at LAR), THLR and LLR i.e. all rented affordable housing which is better suited to PRS schemes. We have allowed for a developer return/profit level of 15% on the PRS revenue.

Table 4.16.1 PRS rents and yields adopted in study

Sub Market	Gross Rent per month - 1 Bed	Gross Rent per month - 2 Bed	Gross Rent per month - 3 Bed	Net Yield
CIL Zone 1 - High	£2,690	£3,640	£4,770	3.25%
CIL Zone 1 - Medium	£1,770	£2,200	£3,250	3.50%
CIL Zone 1 - Low	£1,510	£1,840	£2,450	3.50%
CIL Zone 2 - High	£2,210	£3,185	£4,770	3.25%
CIL Zone 2 - Medium	£1,770	£2,140	£3,250	3.50%
CIL Zone 2 - Low	£1,420	£1,700	£2,450	3.75%
CIL Zone 3 - High	£1,500	£1,880	£2,325	3.50%
CIL Zone 3 - Medium	£1,450	£1,700	£2,180	3.75%
CIL Zone 3 - Low	£1,310	£1,630	£2,160	3.75%

Build costs

- 4.17 We have sourced build costs for the residential schemes from the RICS Building Cost Information Service (BCIS), which is based on tenders for actual schemes adjusted to reflect local circumstances in Tower Hamlets. We have then been provided with additional advice from WT Partnership (“WTP”), who were instructed by the Council to provide advice in relation to the likely extra over costs above the aforementioned base build costs associated with the Council’s policy requirements. We set out the base build costs in Table 4.17.1 overleaf.

Table 4.17.1 Base Build costs adopted in study

Typology No.	Number of units	Housing type	Development density units per ha	Net developable area (ha)	Gross to net for flats	Base build costs per sq m
1	3	Houses	100	0.03	n/a	1,583
2	6	Flats	350	0.02	80%	1,700

⁷ Knight Frank Residential Yield Guide Q1 2017

⁸ CBRE UK Residential Property Investment Yields March 2017

Typology No.	Number of units	Housing type	Development density units per ha	Net developable area (ha)	Gross to net for flats	Base build costs per sq m
3	10	Flats	235	0.04	80%	1,700
4	11	Flats	235	0.05	80%	1,700
5	25	Houses and flats	375	0.07	75%	1,583 2,100
6	50	Flats	380	0.13	75%	2,250
7	100	Flats	210	0.48	75%	2,250
8	250	Flats	280	0.89	75%	2,250
9	400	Flats	630	0.63	75%	2,500

- 4.18 In addition to the base build costs outlined above we have also allowed for other factors which are not included in BCIS. Our appraisals include allowances of 15% for external works and a contingency of 5% of base build costs.
- 4.19 WTP have advised that the costs of SUDs and attenuation is very much dictated by the size of a site, density and ground conditions. It is also dependant on the approach the developer undertakes e.g. using green roofs, permeable paving, simple rainwater harvesting, swales, or water storage etc. The typologies included in this area wide assessment vary greatly from a 3 units to 400 units. WTP's considered advice to test in this study is that the Policy requirements would add circa 0.4% of base build costs.
- 4.20 WTP have advised that the cost of providing step free access to a block of apartments over 3 floors is very small as a lift would normally be provided for a scheme over 4 floors and it would only require a step free ramped access at the entrance which would be a minor cost. The cost of providing step free access to low-rise developments where a lift would not be part of a scheme would be disproportionately expensive as you would need to add in a lift and ramps. This would include providing external ramp, lift pit, lift core and overrun, lift installation to which you need to add Contractor's overheads and profit and preliminaries and in our opinion would cost in the order of £100,000 for samples 2, 3 and 4.
- 4.21 The Greater London Housing Standard Review Viability Assessment dated May 2015 indicates an increase in cost of between 2% - 2.4% of the construction costs to provide step free access in low rise developments. This would equate to circa £40,000-50,000 based on samples 2, 3 and 4, which in their opinion could only be achieved on a two storey scheme using a platform type lift but not on a three storey block using a standard lift. They have therefore advised that an allowance of £100,000 should be adopted in the viability study for achieving step free access to samples 2, 3 and 4.
- 4.22 WTP identify that the Greater London Housing Standards Review Viability Document refers to an increase of circa 1% to 1.5% on construction costs to achieve 35% CO2 reduction standard. This is based on the whole of Greater London Authority (GLA) area and WTP have advised that in their opinion, Tower Hamlets being an Inner London Borough would be at the upper end of this assessment. They have therefore advised that an extra over cost of 1.5% is appropriate to achieve 35% CO2 reduction.
- 4.23 WTP have advised that the Zero Carbon Hub in partnership with the Sweet Group's February 2014 publication (Cost Analysis: Meeting The Zero Carbon Standard), identifies the average UK cost to achieve zero carbon is circa £3,100 per unit (based on an average of houses and apartments at 2016 price levels) and when a London regional weighting is considered this is circa £3,900 per unit for London. They advise that this equates to a circa 2% mark up on the base build costs adopted in this study. Considering Tower Hamlets is an Inner London Borough they have advised that a mark-up of 2.5% would in their opinion be appropriate to achieve Zero Carbon.

Professional fees

- 4.24 In addition to base build costs, schemes will incur professional fees covering design, valuation highways and planning consultants and the cost of preparing and submitting the planning application and so on. Our appraisals incorporate an allowance of 10-12%, which is at the middle to higher end of the range for most schemes.

Development finance

- 4.25 Our appraisals assume that development finance can be secured at a rate of 7%, inclusive of arrangement and exit fees, reflective of current funding conditions.

Marketing costs

- 4.26 Our appraisals incorporate an allowance of 3% for marketing costs, which includes show homes and agents' fees, plus 0.5% for sales legal fees.

Section 106 and CIL

- 4.27 We have adopted an allowance of £1,220 per unit as per the Council's previous CIL viability study, which we understand from the Council is a reasonable assumption based on elements they would seek S106 towards from such schemes.
- 4.28 The Council adopted their CIL Charging Schedule in April 2015. We have allowed for the Council's CIL charges indexed as appropriate to 2016 values, based on the All in Tender Price Index as required by the CIL Regulations (as amended). We set out the base and indexed CIL charges in Table 3.28.1 below. Also see Figure 4.5.1 above for a map of the residential CIL Zones.

Table 3.28.1: Summary of Borough Residential CIL charges

Zone	Base CIL Charge (£ per sq m) (<i>indexed CIL charge</i>)
Zone 1	£200 (£211.58)
Zone 2	£65 (£68.76)
Zone 3	£35 (£37.03)

- 4.29 In addition to Borough CIL, we have also included Mayoral CIL based on £35 per sq m indexed as appropriate to 2016 values (£43 per square metre). CIL applies to net additional floor area only.
- 4.30 CIL applies to net additional floorspace⁹. Given the urban nature of Tower Hamlets our appraisals assume a deduction of 15% for existing floorspace.

Development and sales periods

- 4.31 Development and sales periods vary between type of scheme. However, our sales periods are based on an assumption of a sales rate of 8 units per month. This is reflective of current market conditions, whereas in improved markets, a sales rate of 10 to 12 units per month might be expected.

Developer's profit

- 4.32 Developer's profit is closely correlated with the perceived risk of residential development. The greater the risk, the greater the required profit level, which helps to mitigate against the

⁹ Existing buildings must be occupied for their lawful use for at least six months out of the previous 36 months (three years) prior to grant of planning permission to qualify as existing floorspace for the purposes of calculating CIL liability.

risk, but also to ensure that the potential rewards are sufficiently attractive for a bank and other equity providers to fund a scheme. In 2007, profit levels were at around 15-17% of development costs. However, following the impact of the credit crunch and the collapse in interbank lending and the various government bailouts of the banking sector, profit margins have increased. It is important to emphasise that the level of minimum profit is not necessarily determined by developers (although they will have their own view and the Boards of the major housebuilders will set targets for minimum profit).

- 4.33 The views of the banks which fund development are more important; if the banks decline an application by a developer to borrow to fund a development, it is very unlikely to proceed, as developers rarely carry sufficient cash to fund it themselves. Consequently, future movements in profit levels will largely be determined by the attitudes of the banks towards development proposals.
- 4.34 The near collapse of the global banking system in the final quarter of 2008 is resulting in a much tighter regulatory system, with UK banks having to take a much more cautious approach to all lending. In this context, and against the backdrop of the current sovereign debt crisis in the Eurozone, the banks were for a time reluctant to allow profit levels to decrease. Perceived risk in the UK housing market had been receding with a range of developer profit of between 17% to 20% being seen on developments across London, but the outcome of the referendum on the UK's membership of the European Union has resulted in a degree of uncertainty about the future trajectory of house prices. We have therefore adopted a profit margin of 20% for testing purposes (being at the higher end of the range previously experienced), although individual schemes may require lower or higher profits, depending on site specific circumstances.
- 4.35 Our assumed return on the traditional affordable housing GDV is 6%. A lower return on the affordable housing is appropriate as there is very limited sales risk on these units for the developer; there is often a pre-sale of the units to an RP prior to commencement. Any risk associated with take up of intermediate housing is borne by the acquiring RP, not by the developer. A reduced profit level on the affordable housing reflects the GLA 'Development Control Toolkit' guidance (February 2014) and HCA's guidelines in its Development Appraisal Tool (August 2013).

Exceptional costs

- 4.36 Exceptional costs can be an issue for development viability on previously developed land. Exceptional costs relate to works that are 'atypical', such as remediation of sites in former industrial use and that are over and above standard build costs. However, in the absence of detailed site investigations, it is not possible to provide a reliable estimate of what exceptional costs might be, further these costs will vary on a site by site basis. Our analysis therefore excludes exceptional costs, as to apply a blanket allowance would generate misleading results. An 'average' level of costs for abnormal ground conditions and some other 'abnormal' costs is already reflected in BCIS data, as such costs are frequently encountered on sites that form the basis of the BCIS data sample.
- 4.37 It is expected however, that when purchasing previously developed sites developers will have undertaken reasonable levels of due diligence and would therefore have reflected obvious remediation costs/suitable contingencies into their purchase price.

Benchmark land values

- 4.38 Benchmark land values, based on the existing use value or alternative use value of sites are key considerations in the assessment of development economics for testing planning policies and tariffs. Clearly, there is a point where the Residual Land Value (what the landowner receives from a developer) that results from a scheme may be less than the land's existing use value. Existing use values can vary significantly, depending on the demand for the type of building relative to other areas. Similarly, subject to planning permission, the potential development site may be capable of being used in different ways –

as a hotel rather than residential for example; or at least a different mix of uses. Existing use value or alternative use value are effectively the ‘bottom line’ in a financial sense and therefore a key factor in this study.

- 4.39 We have arrived at a broad judgement on the likely range of benchmark land values. On previously developed sites, the calculations assume that the landowner has made a judgement that the current use does not yield an optimum use of the site; for example, it has fewer storeys than neighbouring buildings; or there is a general lack of demand for the type of space, resulting in low rentals, high yields and high vacancies (or in some cases no occupation at all over a lengthy period). We would not expect a building which makes optimum use of a site and that is attracting a reasonable rent to come forward for development, as residual value may not exceed current use value in these circumstances.
- 4.40 Redevelopment proposals that generate residual land values below current use values are unlikely to be delivered. While any such thresholds are only a guide in ‘normal’ development circumstances, it does not imply that individual landowners, in particular financial circumstances, will not bring sites forward at a lower return or indeed require a higher return. If proven current use value justifies a higher benchmark than those assumed, then appropriate adjustments may be necessary. As such, current use values should be regarded as benchmarks rather than definitive fixed variables on a site by site basis.
- 4.41 The four benchmark land values used in this study have been selected to provide a broad indication of likely land values across the Borough, but it is important to recognise that other site uses and values may exist on the ground. There can never be a single threshold land value at which we can say definitively that land will come forward for development, especially in urban areas.
- 4.42 It is also necessary to recognise that a landowner will require an additional incentive to release the site for development¹⁰. The premium above current use value would be reflective of specific site circumstances (the primary factors being the occupancy level and strength of demand from alternative occupiers). For policy testing purposes it is not possible to reflect the circumstances of each individual site, so a blanket assumption of a 20% premium has been adopted to reflect the ‘average’ situation.
- 4.43 **Benchmark Land Value 1:** This benchmark assumes higher value secondary office space on a hectare of land, with 40% site coverage and 4 storeys. The rent assumed is based on lettings of second hand offices in the Borough at £25 per sq ft. We have assumed a £50 per sq ft allowance for refurbishment and a letting void of three years. The capital value of the building would be £46.225 million, to which we have added a 20% premium, resulting in a benchmark of £55.471 million.
- 4.44 **Benchmark Land Value 2:** This benchmark assumes medium value secondary office space on a hectare of land, with 40% site coverage and 4 storeys. The rent assumed is based on lettings of second hand offices in the Borough at £17 per sq ft. We have assumed a £50 per sq ft allowance for refurbishment and a letting void of three years. The capital value of the building would be £25.531 million, to which we have added a 20% premium, resulting in a benchmark of £30.637 million.
- 4.45 **Benchmark Land Value 3:** This benchmark assumes lower value secondary office space or community use on a hectare of land, with 50% site coverage and 2 storeys. The rent assumed is based on such lettings of second hand premises in the Borough at £12.50 per sq ft. We have assumed a £35 per sq ft allowance for refurbishment and a letting void of three years. The capital value of the building would be £11.923 million, to which we have added a 20% premium, resulting in a benchmark of £14.308 million.

¹⁰ This approach is therefore consistent with the National Planning Policy Framework, which indicates that development should provide “competitive returns” to landowners. A 20% return above current use value is a competitive return when compared to other forms of investment.

- 4.46 **Benchmark Land Value 3:** This benchmark assumes lower value secondary industrial space on a hectare of land, with 60% site coverage and 1.5 storeys. The rent assumed is based on lettings of secondary industrial floorspace in the Borough at £4.95 per sq ft. We have assumed a letting void of two and a half years. The capital value of the building would be £6.243 million, to which we have added a 20% premium, resulting in a benchmark of £7.497 million.

Table 4.46.1: Summary of Benchmark Land Values

Use	Benchmark per gross hectare
Higher Value Secondary Offices	£55,470,629
Medium Value Secondary Offices	£30,637,362
Lower Value Secondary Offices / Community Use	£14,307,614
Secondary Industrial/Warehousing	£7,491,054

5 Appraisal outputs

- 5.1 The full outputs from our appraisals of a range of developments are attached as **appendices 3 to 11**. We have appraised 9 development typologies, reflecting different densities and types of development in Tower Hamlets. Each appraisal incorporates (where relevant) the Council's requirement for affordable housing, tested at different levels.
- 5.2 Within each Appendix, the 9 development typologies are appraised separately. For each site, where relevant, the results of the following analyses are provided:
- 0% affordable housing (current costs and values):
 - 10% affordable housing (current costs and values):
 - AH split 35% SR, 35% THLR, 15% LLR and 15% SO;
 - AH split 35% SR, 35% THLR, 30% SO; and
 - AH split 35% SR, 35% THLR, 30% LLR.
 - 20% affordable housing (current costs and values):
 - AH split 35% SR, 35% THLR, 15% LLR and 15% SO;
 - AH split 35% SR, 35% THLR, 30% SO; and
 - AH split 35% SR, 35% THLR, 30% LLR.
 - 25% affordable housing (current costs and values):
 - AH split 35% SR, 35% THLR, 15% LLR and 15% SO;
 - AH split 35% SR, 35% THLR, 30% SO; and
 - AH split 35% SR, 35% THLR, 30% LLR.
 - 30% affordable housing (current costs and values):
 - AH split 35% SR, 35% THLR, 15% LLR and 15% SO;
 - AH split 35% SR, 35% THLR, 30% SO; and
 - AH split 35% SR, 35% THLR, 30% LLR.
 - 35% affordable housing:
 - Current costs and values:
 - AH split 35% SR, 35% THLR, 15% LLR and 15% SO;
 - AH split 35% SR, 35% THLR, 30% SO; and
 - AH split 35% SR, 35% THLR, 30% LLR.
 - 10% sales value growth and 5% cost inflation:
 - AH split 35% SR, 35% THLR, 15% LLR and 15% SO;
 - AH split 35% SR, 35% THLR, 30% SO; and
 - AH split 35% SR, 35% THLR, 30% LLR.
 - 5% drop in sales values:
 - AH split 35% SR, 35% THLR, 15% LLR and 15% SO;
 - AH split 35% SR, 35% THLR, 30% SO; and
 - AH split 35% SR, 35% THLR, 30% LLR.
 - 42.5% affordable housing (current costs and values):
 - AH split 35% SR, 35% THLR, 15% LLR and 15% SO;
 - AH split 35% SR, 35% THLR, 30% SO; and
 - AH split 35% SR, 35% THLR, 30% LLR Rent.
 - 50% affordable housing (current costs and values):
 - AH split 35% SR, 35% THLR, 15% LLR and 15% SO;
 - AH split 35% SR, 35% THLR, 30% SO; and
 - AH split 35% SR, 35% THLR, 30% LLR.

- 5.3 Viability has been tested on the above affordable housing scenarios. It should be noted that if a scheme is shown to be viable, a greater level of affordable housing might be deliverable within the ‘interval’ that has been tested. For example, if a scheme is shown to be viable with 25% affordable housing, but not with 30% affordable housing the actual level of affordable housing that could be provided will fall between 26% and 29%. Likewise if a scheme is viable at 30% and unviable with 35%, the scheme will be able to provide between 31 and 34%. Schemes that are viable at 35% affordable housing could potentially provide a higher level of affordable housing.
- 5.4 Each page of the Appendix shows the residual land value generated by the scheme (based on the particular combination of affordable housing percentage, sales values and costs), in the grey boxes, and compares this to each of the four benchmark land values, in the yellow boxes.
- Green shading in the results indicates that scheme is viable (where the residual land value is higher than the benchmark land value); and
 - Red shading indicates that the scheme is unviable (where the residual land value is lower than the benchmark Land Value).
- 5.5 The appendices test the cumulative impact of the Council’s requirements. The first set of results indicate the residual values of schemes with no policy requirements i.e. just base build costs with no Section 106 or CIL contributions, sustainability requirements etc. These policy requirements are added incrementally as shown in Table 5.5.1 below.

Table 5.5.1 Table of cumulative impact of costs tested

Base build costs	Base costs & S106 contributions and indexed CIL	Base costs, S106 and CIL & SUDS	Base costs, S106 and CIL, SUDS & Accessibility (small sites)	Base costs, S106 and CIL, SUDS, Accessible & 35% Carbon	Base costs, S106 and CIL, SUDS, Accessible & Zero Carbon
------------------	---	---------------------------------	--	---	--

- 5.6 An example of the layout and costs used to present the appraisal outputs in this study is provided below. The underlying assumptions on value growth and cost growth (if any) for each set of results are stated at the top of each page in the appendices.
- 5.7 In the example overleaf, this particular development typology (T8 – 250 Flats) is located in CIL Zone 2 at high residential values (£850 per sq ft). The affordable housing provided in the scheme includes rented affordable housing at 50% SR and 50% THLR units and intermediate accommodation as 50% LLR and 50% SO. The appraisal results demonstrate that the scheme could currently viably absorb the requirements for Section 106 and CIL, SUDs, Accessibility and Zero Carbon, alongside affordable housing of between 30% and 35% affordable housing when measured against benchmark land value 3.

Figure 5.7.1 Example of results tables

LB TOWER HAMLETS Local Plan Viability Testing 2016							
T8 - 250 Flats				Value Area	CIL Z2 High (£850 psf)		
No Units	250			Sales value inflation	0%

6 Assessment of the results

- 6.1 This section should be read in conjunction with the full results attached at **Appendices 3 to 8**. In these results, the residual land values are calculated for scenarios with sales values and capital values reflective of market conditions across the borough. These RLVs are then compared to a range of benchmark land values.
- 6.2 Development value is finite and – in densely developed boroughs such as Tower Hamlets - it is rarely enhanced through the adoption of new policy requirements. This is because existing use values are to a degree relatively high prior to development. In contrast, areas which have previously undeveloped land clearly have greater scope to secure an uplift in land value through the planning process. In setting its policy requirements, the Council will need to prioritise its requirements due to finite development value.
- 6.3 In assessing the results, it is important to clearly distinguish between two scenarios; namely, schemes that are unviable *regardless of the Council's policy requirements* and schemes that are viable *prior* to the imposition of policy requirements. If a scheme is unviable before policy requirements, it is unlikely to come forward and planning requirements would not be a factor that comes into play in the developer's/landowner's decision making. The unviable schemes will only become viable following an increase in values or a reduction in costs and sites would remain in their existing use.

Analysis of results

- 6.4 The first set of tables analyses the viability of small schemes tested (i.e. less than the 11 unit affordable housing threshold suggested by the NPPG) as well as a 11 unit scheme, which according to the NPPG be required to deliver affordable housing, compared to an appropriate benchmark land value across the different value areas. The results confirm that although there is some variance in viability between schemes, values areas and dependant on benchmark land values, such developments can viably deliver the THDLP policies along with contributions towards affordable housing.
- 6.5 Further, the results also demonstrate that there is no notable difference in scheme viability when comparing the viability of the 10 unit scheme versus the 11 unit scheme. In this regard we consider the threshold to be an artificial floor for the requirement for affordable housing and is not necessary to ensure the viability or deliverability of smaller schemes.

Table 6.5.1: Viability of developments below 11 unit national threshold – development typologies 1 (3 Houses), 2 (6 Flats) and 3 (10 Flats)

CIL Zone 1 (High Value) - Benchmark Land Value 1 (higher value secondary offices)

6.6 Tables 6.6.1 compares the viability of Development Typology 5, a mixed housing and flatted scheme (25 flats (90%) and houses (10%)), Typology 7 a fully flatted scheme of 100 units and a high density flatted scheme of 400 units. As before, we set out the results in the tables below from all of the market value areas, measured against two benchmark land values.

Table 6.6.1: Viability of larger developments – development typologies 5 (25 Flats and Houses), 7 (100 Flats) and 9 (400 Flats)

- 6.7 In general, the results identify that viability can be challenging for denser schemes (Typologies 7 and 9) in the lower value parts of the borough in particular, lower values identified in CIL Zone 3 and 2. However, it is considered likely that the denser schemes are likely to secure higher average values given the premium attributed to units on higher floors. The results also demonstrate that viability can be challenging on the higher benchmark land values in some areas and with respect to certain development scenarios.

Conclusion

- 6.8 We have tested the impact of the Council's strategic affordable housing policy targets (ranging between 35% to 50%) and other requirements (including Section 106 and CIL, SUDS, Accessibility and Zero Carbon). The results generated by these appraisals indicate that although many developments could viably provide all or a large majority of the policy requirements, in order to ensure the delivery of the required growth in the borough, particularly in the lower value areas, the flexible approach to the application of its policies (i.e. subject to viability) remains an important element.
- 6.9 Some schemes, subject to their benchmark land values and build costs, are able to achieve higher quantities of affordable housing showing viability of up to the higher strategic target of 50% affordable housing. Further, in many cases where schemes show viability, our appraisals demonstrate that schemes can accommodate the Council's lower strategic affordable housing target of 35%. As can be expected however, some schemes are also identified as having challenging viability, regardless of the Council's affordable housing policy i.e. they are identified as being unviable at 0% affordable housing. In Tower Hamlets, we consider this to be mainly as a result of high benchmark land values, particularly in CIL Zone 1. In practice, however, such sites are unlikely to come forward for development as they are more valuable in their existing or an alternative use. Due to the caveat in the emerging plan that determination of applications will have regard to scheme-specific viability, the Council is not required to demonstrate that every single site (or type of site) can meet the full 50% to 35% strategic target. However, our appraisals indicate that these targets can be delivered in some circumstances and setting a lower target would not result in the optimum outcome in terms of total numbers of affordable units delivered.
- 6.10 As previously identified, in considering the outputs of the appraisals, it is important to recognise that some developments will be unviable regardless of the Council's requirements. In these cases, the value of the existing building or the base costs (excluding policy requirements) will be higher than a redevelopment opportunity over the medium term. However, this situation should not be taken as an indication of the viability (or otherwise) of the Council's policies and requirements. In these situations, there will be little pressure from owners to redevelop for residential use and they might re-consider the situation when values change over time.
- 6.11 We note that viability looks less favourable in the high-density schemes at lower values and higher benchmark land values. However, we would highlight that such schemes will most likely only come forward where the values achievable are able to meet the costs of delivering tall/high density schemes. Therefore, it would be reasonable to expect such schemes to achieve above the mid sales values and more likely the higher sales values for each CIL Zone and to be assessed against an appropriate benchmark land value for the area. i.e. CIL Zone 2 is unlikely to achieve benchmark land values at the level of BLV 1 and CIL Zone 3 is unlikely to achieve benchmark land values at the level of BLV 1 and 2.
- 6.12 The Council's proposed flexible approach (as set out in Policies S.H1 and D.SG5) seeks the delivery of affordable housing where applications will be considered on a site by site basis in light of scheme viability. The results of this study identify that maintaining this approach is reasonable and will assist in ensuring that the majority of developments will be able to come forward over the economic cycle.

Sensitivity test of intermediate tenure

- 6.13 As identified in section 5, we have undertaken sensitivity testing of the tenure of the intermediate affordable housing units. Policy D.H2 'Affordable housing' identifies that the Council requires the maximisation of 'the provision of affordable housing in accordance with a 70% rented and 30% intermediate tenure split'
- 6.14 As identified in previous sections, the Council have identified that with respect to the policy starting position the 70% rented affordable element is to be evenly split between SR and THLR. With respect to the 30% intermediate units however, the Council has indicated that they are willing to be flexible and have requested that three options of this provision be tested as follows:
- i. 50% LLR and 50% SO;
 - ii. 100% SO; and
 - iii. 100% LLR.
- 6.15 We have adopted scenario (i) as the base position in the testing in this study, however we set out the results of scenarios (ii) and (iii) against scenario (i) below to assist the Council's understanding of the impact of securing the delivery of such units entirely as SO or LLR units as compared to a 50/50 split between the two tenures. The full results of our appraisals are set out in **appendices 4 and 5**. We set out below the results of typology 6 (50 Flats).

Table 6.15.1: Viability of different intermediate tenures – development typology 6 (50 Flats)

- 6.16 The sensitivity testing of affordable housing tenures as part of this assessment has identified that viability can be seen to improve marginally in some instances where SO units are sought instead of LLR. On this basis, we consider that there is scope for and merit in the Council's approach of being able to consider the tenure of affordable housing delivered on sites on a case by case basis so that they are best able to address the housing needs in the borough.

Sensitivity analysis on values and costs

- 6.17 As noted in Section 5, we carried out further analyses which consider the impact of increases in sales values of 10%, accompanied by an increase in build costs of 5% as well as the impact of a decrease in sales values of 5%. This data is illustrative only, as the future housing market trajectory is uncertain. However, if such increases were to occur, the tables contained within **appendices 6 to 11** set out the results in terms of the levels of policy requirements including Section 106 and affordable housing that could be viably provided. It is noted however, that these results provide a useful indication of the likely position for the Councils' requirement for schemes to achieve higher levels of sustainability and the delivery of affordable housing given an improvement in the market. It is also worth noting that given the predicted improvement in the market in the medium term, there may be potential for developer's return/profits to reduce in future to the levels that were starting to be seen prior to the result of the EU Referendum vote. This would further improve viability, as would the ability for S106 developments to secure grant funding for affordable housing.
- 6.18 The sensitivity appraisals indicate that such an increase in sales values and build costs would result in an improvement in viability and the ability of schemes to provide affordable housing in combination with S106 contributions and other policy requirements such as SUDs, accessibility and sustainability (the costs of the latter in particular are expected to reduce over time). Over the life of the Council's THDLP, additional growth is likely, leading to a further improvement in scheme viability.

The impact of the Vacant Building Credit

- 6.19 This section considers the impact of the VBC and the Council's approach to maintaining the maximum reasonable quantum of affordable housing is delivered in the Borough, whilst ensuring development can viably come forward.
- 6.20 In March 2014, the Government published a consultation on "Planning Performance and Planning Contributions", which sought views on 'a further amendment to national policy so that local authorities should not apply section 106 affordable housing contributions to buildings brought back into any use, other than proportionately for any increase in floor space. This would be on the basis of providing an incentive for brownfield development in accordance with national policy.' (Para 8 of the Government's response to the consultation on the Planning Contributions (Section 106 planning obligations) published in November 2014). In the Government's response to the consultation published in November 2014 it identified at Para 23 that:

'After careful consideration of these responses we are making the following changes to national policy with regard to section 106 planning obligations: ...

...A financial credit, equivalent to the existing gross floorspace of any vacant buildings brought back into any lawful use or demolished for re-development, should be deducted from the calculation of any affordable housing contributions sought from relevant development schemes. This will not however apply to vacant buildings which have been abandoned.'

- 6.21 This position was further reiterated by Brandon Lewis, The Minister of State, Department for Communities and Local Government (DCLG) identified in his written ministerial statement ('WMS') to the House of Commons on 28 November 2014 (Column 53WS) which set out that:
- '...A financial credit, equivalent to the existing gross floor space of any vacant buildings brought back into any lawful use or demolished for re-development, should be deducted from the calculation of any affordable housing contributions sought from relevant development schemes. This will not however apply to vacant buildings which have been abandoned. We will publish revised planning guidance to assist authorities in implementing these changes shortly.'*
- 6.22 Subsequently on 28 November 2014 DCLG updated the National Planning Practice Guidance (NPPG) to introduce the vacant building credit, and consequently only requires affordable housing obligations to apply to any increase in floorspace in proposed developments. The NPPG was further updated on 24 February and 26 March 2015. The VBC identifies that affordable housing obligations should only be sought on any increase in floorspace in proposed developments. Paragraph: 021 of the NPPG (Reference ID: 23b-021-20150326) identifies that:
- 'National policy provides an incentive for brownfield development on sites containing vacant buildings. Where a vacant building is brought back into any lawful use, or is demolished to be replaced by a new building, the developer should be offered a financial credit equivalent to the existing gross floorspace of relevant vacant buildings when the local planning authority calculates any affordable housing contribution which will be sought. Affordable housing contributions may be required for any increase in floorspace.'*
- 6.23 Paragraph 022 of the NPPG (Reference ID: 23b-022-20150326) goes on to specify that,
- 'Where there is an overall increase in floorspace in the proposed development, the local planning authority should calculate the amount of affordable housing contributions required from the development as set out in their Local Plan. A 'credit' should then be applied which is the equivalent of the gross floorspace of any relevant vacant buildings being brought back into use or demolished as part of the scheme and deducted from the overall affordable housing contribution calculation. This will apply in calculating either the number of affordable housing units to be provided within the development or where an equivalent financial contribution is being provided. The existing floorspace of a vacant building should be credited against the floorspace of the new development. For example, where a building with a gross floorspace of 8,000 square metre building is demolished as part of a proposed development with a gross floorspace of 10,000 square metres, any affordable housing contribution should be a fifth of what would normally be sought.'*
- 6.24 We note that the national threshold for the application of affordable housing policies as set out in the NPPG was reinstated on 13 May 2016 following the Government's successful appeal of the High Court Decision in July 2015¹¹. Notwithstanding this, we note that the Court of Appeal's judgement clearly identifies that the policies introduced by the WMS/NPPG do not have to be applied in a blanket fashion. Further, it sets out at paragraph 36 that, *'The planning legislation establishes a framework for the making of planning decisions; it does not*

¹¹ R on the Application of West Berkshire District Council v Department for Communities and Local Government (Case Number: CO/76/2015)

lay down merits criteria for planning policy, or establish what the policy-maker should or should not regard as relevant to the exercise of policy-making.’ On this basis, a local planning authority is able to introduce a local approach to these policies, subject to having evidence to support their introduction.

Interaction between percentage target based policy and VBC

- 6.25 The application of the VBC reduces the quantum of the development that local Planning authorities can seek the provision of affordable housing from. We set out below a simple diagrammatic example of this assuming a 10,000 sq m scheme, which assumes a policy requirement of 35% affordable housing for illustrative purposes.

Figure 6.25.1: Without VBC position

Pvt = Private Housing
AH = Affordable Housing

Figure 6.25.2: With VBC position

- (i) assuming that existing building is 25% of the proposed floorspace (75% of proposed scheme eligible to be considered for AH delivery)

(ii) assuming existing building is 50% of the proposed floorspace (50% of proposed scheme eligible to be considered for AH delivery)

(iii) assuming existing building is 75% of the proposed floorspace (25% of proposed scheme eligible to be considered for AH delivery)

- 6.26 It is clear from the above diagrams that regardless of scheme viability the VBC reduces the quantum of floorspace from which local planning authorities can seek the provision of affordable housing. The application of a target or set percentage of affordable housing sought (i.e. 35% etc.) applies a further complication and restriction on the amount of affordable housing that could be delivered by a scheme as this becomes a percentage of a percentage. In BNP Paribas Real Estate and the Council's experience there is no reliable correlation between the viability of schemes and the VBC policy mechanism which operates on net additional floorspace. The determination of a scheme's viability is more complex than this and varies from site to site and scheme to scheme.
- 6.27 The VBC is identified to be a blunt tool, which has a tendency to go too far in reducing affordable housing in some schemes and does not go far enough in other schemes to ensure their viable delivery. Thus, BNP Paribas Real Estate has genuine concerns that the VBC policy will both prevent the delivery of housing in the Borough (where a site-specific viability assessment would justify a lower provision of affordable housing to bring the site forward) and significantly impact on the delivery of affordable housing (by reducing the policy compliant level of affordable housing well below what the scheme could viably deliver).
- 6.28 VBC does not make schemes more viable i.e. the surplus/deficit remains unchanged, it simply reduces the amount of floorspace that the Council can seek their affordable housing provision from. Given the urban nature of the Borough and that the majority of sites that

come forward for redevelopment are brownfield sites, which could be eligible for the VBC, this would have a significant impact on the Council's affordable housing supply. Furthermore, sites are coming forward in the Borough without the assistance of VBC, as affordable housing delivery on individual sites can be adjusted if necessary to assist with site-specific viability issues. We note that this position is supported by the Mayor of London's recently published Draft Affordable Housing and Viability Supplementary Planning Guidance 2016 ('DSPG'). The DSPG sets out at para 13 (with BNP Paribas Real estate emphasis underlined) that,

'This part also sets out the Mayor's approach to the national Vacant Building Credit policy. The intention of the Government's policy is to bring forward sites containing vacant buildings which would not otherwise come forward for development. However given that in London such sites already come forward for development and affordable housing requirements are already subject to viability testing and thus are not preventing sites from coming forward the Mayor's view is that in most circumstances in London it will not be appropriate to apply the Vacant Building Credit.'

- 6.29 In light of the above, we conclude that in Tower Hamlets the VBC policy is an inappropriate mechanism for delivering the maximum viable quantum of affordable housing as well as incapable of ensuring the delivery of schemes with more complex economic viability characteristics. BNP Paribas Real Estate consider that the VBC is likely to significantly impact on the quantum of affordable housing delivered by the Council's existing and adopted affordable housing policies. On this basis, we consider that the application of the VBC on schemes in the Borough will undermine the objectives of the Development Plan.
- 6.30 In addition, we are of the opinion that the Council's current approach of determining the amount of affordable housing in each scheme on its own merits will ensure the Council is able to maintain a reasonable supply of affordable housing in the Borough without prejudicing the delivery of development. We are aware that schemes are coming forward for redevelopment in the Borough on this basis and in this regard, we consider that there is no need to introduce further incentives to encourage development in Tower Hamlets. Values in the Borough following the recession have increased significantly since the previous peak and predicted value growth over the next five years remains robust. On this basis, we consider the Council's approach to the VBC set out in Policy D.SG5 'Developer Contributions' to be a reasonable approach given the nature of development in the borough.

Estate regeneration

- 6.31 Policy D.H2 'Affordable housing' identifies at parts 5 (a) and (b) that, Estate regeneration development schemes are required to:
- a protect and enhance open space, community facilities and the existing quantum of affordable and family units;
 - b provide an uplift in the number of affordable homes; and
 - c bring existing homes up to the latest decent homes standard.
- 6.32 Paragraph 4.37 (supporting text to policy D.H2) states:
- "that additional homes may be provided through estate regeneration schemes and seeks to secure that any net additional homes are also subject to the affordable housing requirements in policies S.H1 (see part 2) and D.H2 (see parts 1 and 2)."*
- 6.33 The Council's proposed policy seeks the re-provision of existing affordable housing and through the application of Policy S.H1, which looks to secure a minimum of 35% affordable housing from any net additional housing provided in estate regeneration schemes subject to viability. On this basis estate regeneration schemes will continue to come forward with

proportions of market housing included to cross subsidise the re-provision of the existing affordable housing on the estate. However, where this cross subsidy is not able to deliver increased quantum of affordable housing, Policy S.H1 will enable developers and RPs to submit a viability assessment to support their case, as frequently happens on such sites. Clearly there will be a limit to the delivery of units on a site due to the constraints of bulk and massing and on this basis a site may not be able to provide enough additional private housing to support both the re-provision of existing units as well as up to 50% of the net additional homes as affordable units.

- 6.34 Given that each estate regeneration scheme will be unique, not only due to the usual scheme and site heterogeneity issues, but also owing to differences in significant financial costs associated with site assembly. These costs include but are not limited to decant, disturbance and home loss payments and acquiring freehold properties purchased under the right to buy, which will be necessary expenses to obtain vacant position of the site. We understand that the freehold of many estates have been transferred to RPs from the Council at 'nil value', which is effectively the Council's contribution towards assisting with overcoming the significant site assembly costs. Such sites therefore often do not have benchmark land values to achieve, only the significant aforementioned additional costs as part of upfront costs to the site assembly.
- 6.35 Considering the acute need for net additional affordable homes in London and Tower Hamlets as evidenced by the Tower Hamlets Strategic Housing Market Assessment (SHMA), 2017, it is vital that the Council is able to both protect existing numbers of affordable housing provided on estates as well as the ability to seek an increase in the provision of affordable housing in developments wherever feasible and viable. In light of this evidenced need and the above position we consider that the requirements of the Council's policies D.H2 and S.H1 for estate regeneration is reasonable and deliverable given the flexibility provided in the i.e. subject to viability, which enable site and scheme specific issues to be considered on a case by case basis.

PRS

6.36 The Table 6.36.1 below sets out a summary of the results of our appraisals of residential schemes provided as PRS in Tower Hamlets. The full results of our appraisals can be seen at **Appendix 12**.

- 6.37 As with the sale residential schemes we have tested the impact of the Council's strategic affordable housing policy targets (ranging between 35% to 50%) and other requirements (including Section 106 and CIL, SUDS, Accessibility and Zero Carbon). We have assumed the affordable housing is provided as rented tenures, which is in keeping with government advice on such tenures.
- 6.38 The results generated by these appraisals indicate that viability varies greatly across the borough in such schemes. Some schemes, subject to their benchmark land values and rental values, are able to achieve higher quantities of affordable housing showing viability of up to the higher strategic target of 50% affordable housing. As can be expected however, some schemes are also identified as having challenging viability, regardless of the Council's affordable housing policy i.e. they are identified as being unviable at 0% affordable housing. Such sites are unlikely to come forward for development as PRS schemes as they are more valuable in their existing or an alternative use. We are also aware that PRS schemes vary from scheme to scheme with some being more variable assets due to not only rental levels but operators' being able to achieve greater economies of scale on management costs etc.
- 6.39 Some developments are identified as viably able to provide all or a large majority of the policy requirements, particularly affordable housing. Given the high need for affordable housing in the Borough and London, we consider that the Council's flexible policies (S. H1 Policy D.SG5) which allow for schemes to be considered on a scheme-specific viability basis will ensure the ensure the delivery of the required growth in the borough, particularly in the lower value areas, whilst ensuring the maximum reasonable quantum of affordable housing is delivered in a range of housing developments.
- 6.40 We would highlight that our appraisals indicate that the affordable housing targets can be delivered in some circumstances and setting a lower target would not result in the optimum outcome in terms of total numbers of affordable units delivered.

7 Strategic sites

7.1 We have run high level appraisals of 14 strategic sites selected by the Council to test the viability of key sites in the Borough which will be instrumental in the delivery of the THDLP's growth strategy.

7.2 The sites considered and their key features are summarised in Table 7.2.1 below.

Table 7.2.1 Details of strategic sites assessed

Site No.	Site name	Existing use	Gross Site size (ha)	Infrastructure requirement	Current ownership
1	Bishopsgate Goods Yard	Shoreditch High Street Overground Station; "Box Park" Football Pitches Vacant Land	4.24	1. Strategic Open space 2. Local Presence Facility 3. Leisure Uses – Football Pitches	Private
2	Bow Common Gas Works	Gas Works	3.94	1. Secondary School 2. Strategic Open Space	Private
3	Billingsgate Market	Wholesale Market	5.74	1. Secondary School 2. Open Space	Private
4	North Quay	Vacant land	3.48	1. Open space	Private
5	Vacant land adjacent to new Reuters Ltd server building	Vacant land	2.71	1. Primary School 2. Open space	Private
6	Limeharbour - Skylines Site	Industrial and office space	1.56	Primary School	Private
7	Marsh Wall East - Thames Key site	Offices	1.6	Primary School	Private
8	Marsh Wall West - Marsh Wall, Alpha Square	Medical centre Pub Business uses	0.4	1. Primary School 2. Health facility	Private
9	Millharbour - Mastmaker Road/ Lightermans Road Site	Education and Training Centre	0.97	Health Centre	Private
10	Crossharbour Town Centre	Supermarket, car parking	6.06	1. Local Presence Facility 2. Health Facility 3. Primary School	Private
11	Leven Road Gas Works	Active gas holders	8.56	1. Secondary School 2. Open Space	Private
12	Whitechapel South - Site bound by raven row	Warehouse Facility used for sports	1.39	None	Private
13	Millharbour South - 5, 6, 7, 8 Greenwich View Place	Secondary Offices	0.95	1. Primary School	Private
14	Marian Place Gas Works	Gas works	1.9	1. Strategic Open Space	Private

Methodology

- 7.3 We have used *Argus Developer* (“Argus”) to undertake the high level appraisals of developments on the 14 strategic sites. Argus is a commercially available development appraisal package in widespread use throughout the development industry. It has been accepted by a number of local planning authorities for the purpose of viability assessments and has also been accepted at planning appeals. Banks also consider Argus to be a reliable tool for secured lending valuations. Further details can be accessed at www.argussoftware.com
- 7.4 Argus is essentially a cash-flow model. Such models all work on a similar basis:
- Firstly, the value of the completed development is assessed.
 - Secondly, the development costs are calculated, including either the profit margin required or land costs. In our appraisals we include profit as a development cost.
- 7.5 The difference between the total development value and total costs equates to the residual land value (“RLV”). The model is normally set up to run over a development period from the date of the commencement of the project until the project completion, when the development has been constructed and is occupied.
- 7.6 The cash-flow approach allows the finance charges to be accurately calculated over the development period. This approach can accommodate more complex arrangements where a number of different uses are provided or development is phased.
- 7.7 In order to assess whether a development scheme can be regarded as being economically viable, with a given level of planning obligations, it is necessary to compare the RLV that is produced with a benchmark land value. If a development generates a RLV that is higher than the benchmark it can be regarded as being economically viable and therefore capable of providing a greater quantum of obligations. However, if a development generates a RLV that is lower than the benchmark, it should be deemed economically unviable and the quantum of planning obligations would need to be reduced until viability is achieved.
- 7.8 The approach taken to appraising the larger sites (Bishopsgate Goods Yard, Billingsgate Market, Crossharbour Town Centre and Leven Road Gas Works) is based on the assessment of an un-g geared and un-grown IRR assuming a fixed land cost (the identified benchmark land value). For long term projects of this nature it would not be unreasonable for a developer / landowner to measure profitability on this basis.

Inputs

- 7.9 Further details of the schemes tested and the inputs adopted in the appraisals for the 16 sites are set out clearly in **Appendix 13**.

Viability Benchmarks

- 7.10 We have undertaken an assessment of the existing use values (“EUVs”) of each of the sites, using either pro-rata values from the benchmark land values identified in section 4 or an assessment of the existing floorspace and uses on the site. In order to encourage the landowners to bring the sites forward for development (allowing for a ‘competitive return’), we have added a premium of 20% to the value. The benchmark land values that result from this assessment are shown in Table 7.10.1 below.

Table 7.10.1: Viability benchmarks

Site No.	Site	Existing Use Value (£ millions)
1	Bishopsgate Goods Yard	£23.472
2	Bow Common Gas Works	£21.811
3	Billingsgate Market	£31.775
4	North Quay	£19.264
5	Vacant land adjacent to new Reuters Ltd server building	£15.002
6	Limeharbour - Skylines Site	£31.732
7	Marsh Wall East - Thames Key site	£43.773
8	Marsh Wall West - Marsh Wall, Alpha Square	£5.982
9	Millharbour - Mastmaker Road/ Lightermans Road Site	£8.202
10	Crossharbour Town Centre	£56.167
11	Leven Road Gas Works	£23.693
12	Whitechapel South - Site bound by raven row	£26.045
13	Millharbour South - 5, 6, 7, 8 Greenwich View Place	£31.992
14	Marian Place Gas Works	£10.512

Appraisal results

7.11 Table 7.11.1 below shows the residual land value for each site against the viability benchmark, whilst Table 7.11.2 identifies the ungrown IRR for the four large sites tested.

Table 7.11.1: Appraisal results of smaller sites with 35% affordable housing

Site No.	Site/scenario	Residual Land Value (£ millions)	Viability Benchmark (£ millions)	Surplus / deficit against benchmark (£ millions)
2	Bow Common Gas Works	-£14.250	£21.811	-£36.061
5	Vacant land adjacent to new Reuters Ltd	£16.340	£15.002	£1.338
6	Limeharbour – Skylines Site	£48.955	£31.732	£17.223
7	Marsh Wall East – Thames Key Site	£77.536	£43.773	£33.763
8	Marsh Wall West – Marsh Wall, Alpha Square	£28.258	£5.982	£22.276
9	Millharbour – Mastmaker Road	£49.757	£8.202	£41.555
12	Whitechapel South – Site bound by Raven Row	£26.200	£26.045	£0.155
13	Millharbour South – 5,6,7,8 Greenwich View Place	£18.486	£31.992	-£13.506
14	Marian Place Gas Works	£11.267	£10.512	£0.755

Table 7.11.2: Appraisal results of large sites with 35% affordable housing measured using IRR

Site No.	Site/scenario	Fixed Land cost (£ millions)	Ungrown and ungeared IRR achieved
1	Bishopsgate Goods Yard	£23.472	31.58%
3	Billingsgate Market	£31.775	23.46%
4a	North Quay (Initial scheme)	£19.264	27.77%
4b	North Quay (Alternative scheme with 25% housing)	£19.264	27.29%
10	Crossharbour Town Centre	£56.167	14.96%
11	Leven Road Gas Works	£23.693	5.86%

7.12 Policy D.EMP2 (New employment space) seeks to secure at least 10% of new employment floorspace should be provided as affordable workspace within major commercial and mixed-use development schemes. The supporting text to this policy (para 5.24) explains that this means “at least 10% below the indicative market rate for the relevant location”. Given this we have undertaken sensitivity testing of a number of the strategic sites assuming 10% of the office space is let at rents 50% below the market rents and have adopted a higher yield than that for the market rented space, acknowledging that the occupiers of such space are likely to have a lower covenant strength. We set out the results of this testing in Tables 7.12.1 and 7.12.2.

Table 7.12.1: Appraisal results of smaller sites with 35% affordable housing and 10% affordable workspace

Site No.	Site/scenario	Residual Land Value (£ millions)	Viability Benchmark (£ millions)	Surplus / deficit against benchmark (£ millions)
8	Marsh Wall West – Marsh Wall, Alpha Square	£28.195	£5.982	£22.213
12	Whitechapel South – Site bound by Raven Row	£26.019	£26.045	-£0.026

Table 7.12.2: Appraisal results of large sites with 35% affordable housing and 10% affordable workspace measured using IRR

Site No.	Site/scenario	Fixed Land cost (£ millions)	Ungrown and ungeared IRR achieved
1	Bishopsgate Goods Yard	£23.472	29.20%
3	Billingsgate Market	£31.775	21.93%
4a	North Quay (Initial scheme)	£19.264	25.98%
4b	North Quay (Alternative scheme with 25% housing)	£19.264	25.05%
10	Crossharbour Town Centre	£56.167	14.68%

Assessment of viability against local plan policy requirements

- 7.14 We have undertaken an assessment of each of the strategic sites identified by the Council, applying the relevant general and site specific THDLP policy requirements that apply to the sites including infrastructure requirements (as identified in Table 7.4.1).
- 7.15 With respect to the larger sites we appreciate that developers often suggest that they are targeting an IRR of 20%, however, it has been our experience on large schemes in London that this is often based on grown IRRs given the long term nature of such schemes. Further, we are aware of developers having agreed to proceed with developments identified as generating IRRs of 13% (ungrown). On this basis we are of the opinion that the large majority of the sites tested are viable and can deliver the emerging THDLP policy requirements.
- 7.16 With respect to the small number of sites identified as being unviable at the full THDLP policy requirements we highlight that the flexibility provided within these policies will ensure that these sites are still able come forward. In particular the affordable housing policy provides that the Council will consider site specific issues to ensure that schemes can come forward whilst delivering the maximum reasonable quantum of affordable housing. This is borne out by the sensitivity testing we have undertaken on Site 13 Millharbour South, which is identified as being viable at between 20% to 25% affordable housing.
- 7.17 Site 2 Bow Common Gas Works and Site 11 Leven Road Gas Works are identified as having challenging viability. Given the nature of the existing use on the sites there is potential for a significant decontamination works bill. We have included an allowance of £3.2m per pa for the sites, based on our experience of the costs associated with decontamination of similar gasworks sites in London, which amounts to abnormal costs of £12.608 million and £27.329 million respectively. We have assumed a worst case scenario in our testing in that we have allowed for the full EUV plus a 20% premium of the site as well as the decontamination bill being paid by the developer. In reality a developer is likely to take these costs into consideration in bidding for the site or alternatively the landowner will bear the cost of the decontamination, delivering a clean site to the market and recovering the costs through a higher purchase price than would otherwise have been achieved. On this basis we have undertaken sensitivity testing of the two schemes.
- 7.18 Our sensitivity testing of Site 2 Bow Common Gas Works assumes that a developer deducts the cost of the decontamination from the purchase price of the site and on this basis the site is deliverable as a 100% private scheme in conjunction with the Council's other policy requirements generating a surplus of £4.898 million, which could deliver between 0-5% affordable housing on site.
- 7.19 Our sensitivity testing of Site 11 Leven Road Gas Works has identified that where the decontamination is assumed to be carried out by the landowner and the full EUV plus 20% premium is paid, the site can deliver circa 25% affordable housing reflecting an ungrown IRR of 14.09%.
- 7.20 Of interest and contrast to the aforementioned gas works sites we note that Site 16 Marian Place Gas Works is identified as being viable including the decontamination allowance of £3.2 million per ha. We consider the reasons for the site's viability to be attributed to both the higher residential sales value achievable in this location as well as the scheme tested being 179% and 94% more densely developed as sites 2 and 11 respectively.
- 7.21 In light of the above we consider that all bar one of the identified Strategic Sites are deliverable, with the large majority able to support the emerging THDLP policy requirements. Three of the sites in particular are identified as having more challenging viability as a result of the site specific characteristics, existing use onsite and proposed schemes tested rather than the Council's emerging policy requirements. However, we consider that the Council's policies build in an appropriate level of flexibility both specifically where policies have cost implications as well as identifying an overarching flexible approach to the implementation of

the THDLP which allows for sites and schemes to be determined on a case by case basis. This will ensure that the Council's strategic sites are both deliverable by the market and acceptable in planning terms i.e. that developments generate competitive returns to willing landowners and willing developers whilst also striking an appropriate balance between achieving policy objectives, including meeting needs for affordable housing.

- 7.22 Our sensitivity testing of the delivery of affordable workspace in major commercial or mixed use schemes as required by Policy D.EMP2 in the strategic sites has identified that they can viably do so (Tables 7.12.1 and 7.12.2). We note that our testing of Site 12 Whitechapel South shows that the RLV is just under the identified BLV, however we would highlight that our testing has assumed the schemes deliver affordable workspace at 50% of the market rent. Further sensitivity testing of this site has identified that it can viably deliver affordable workspace at a discount of 40% from the market rent, which is still significantly below the Council's policy minimum requirement of 10% below the prevailing market rent. On this basis we conclude that Policy D.EMP2 understandably adds a cost to development, so the Council should consider the application of this requirement flexibly, however this is identified as not being significant cost and the schemes tested have been demonstrated that they are able to viably accommodate this requirement.

8 Conclusion and recommendations

- 8.1 The NPPF states that the cumulative impact of emerging local planning authority standards and policies “*should not put implementation of the plan at serious risk, and should facilitate development throughout the economic cycle*”. This report and its supporting appendices test this proposition within the London Borough of Tower Hamlets.
- 8.2 Development value is finite and in Tower Hamlets where development is primarily sourced from previously developed sites it is rarely enhanced through the adoption of new policy requirements. This is because existing use values are to a degree relatively high prior to development. In contrast, areas which have previously undeveloped land clearly have greater scope to secure an uplift in land value through the planning process. In setting and assessing its policy requirements when determining planning applications, the Council has to prioritise its requirements due to finite development value.
- 8.3 In considering the outputs of the appraisals, it is important to recognise that some developments will be unviable *regardless* of the Council's requirements. In these cases, the value of the existing building or the base costs (excluding policy requirements) will be higher than a redevelopment opportunity over the medium term. However, this situation should not be taken as an indication of the viability (or otherwise) of the Council's policies and requirements. In these situations, there will be little pressure from owners to redevelop for residential use and they might re-consider the situation when values change over time.
- 8.4 We have tested the impact of the Council's strategic affordable housing policy targets (ranging between 35% to 50%) and other requirements (including Section 106 and CIL, SUDS, Accessibility and Zero Carbon). The results generated by these appraisals indicate that although many developments could viably provide all or a large majority of the policy requirements, in order to ensure the delivery of the required growth in the borough, particularly in the lower value areas, the flexible approach to the application of its policies (i.e. subject to viability) remains an important element.
- 8.5 With respect to the WMS/NPPG threshold of 11 units triggering affordable housing requirements, the results in this study do not identify a natural split or indication of a threshold where affordable housing should or should not be sought i.e. they indicate that there is no direct correlation between the size of a scheme and its viability. Viability is determined by a range of elements including but not limited to, the density of the scheme, the build costs incurred, the level of the sales values achievable and of key importance the benchmark land value. The testing has identified that the Council is able to seek affordable housing on all sites including small sites under the 11 unit threshold, subject to viability.
- 8.6 As expected, the results of our testing identify that as the affordable housing percentage is progressively reduced from 50% to 10%, the number of viable scenarios increases and residual land values increase across all scenarios. This does not imply that the target should be reduced, as the schemes that could otherwise have accommodated a higher proportion of affordable housing would no longer be required to do so. Providing the target is applied flexibly, the schemes on the margins of viability would still be able to come forward, but at levels of affordable housing below the 35% to 50% strategic target. This approach would maximise the overall quantum of affordable housing, even if the actual 50% strategic target is achieved in a small number of live cases.
- 8.7 The results of our appraisals therefore indicate that the Council's strategic affordable housing target of 35% - 50% on sites providing net additional residential units set out in Strategic Policy H1 'Delivering Housing' remains a reasonable position. Our appraisals indicate that there is a sufficient extent of viable outcomes to conclude that the adoption of a 50% target is (a) supported by the evidence and (b) will not put the scale of housing in the emerging plan at risk, providing the flexibility envisaged by policies S.H1 and D.SG5 i.e. subject to viability, follows through into the adopted plan. We consider that the Council could stand to lose affordable housing from schemes were they to reduce their existing affordable

housing target as developers of schemes which could deliver higher levels of affordable housing would simply submit schemes offering levels of affordable housing at the new reduced threshold.

- 8.8 The base position appraisals tested assume a 70% 30% tenure split of rented and intermediate units in line with Policy D.H2 of which each element is split 50/50 SR/THLR and SO/LLR respectively. The sensitivity testing of the intermediate affordable housing tenures as part of this assessment has identified that viability can be seen to improve marginally where SO is sought in place of LLR. We therefore consider that the flexibility in Policy D.H2 with respect to the mix of tenure will allow the Council to consider the delivery of sites on a case by case basis over the life of the plan so that they are best able to address the housing needs in the borough.
- 8.9 VBC is intended to provide incentives to developers to bring forward development on sites which are currently occupied by vacant buildings. Due to high sales values in the Borough and strong competition between developers for sites, incentives to reuse existing vacant sites are rarely if ever required. Furthermore, the VBC has the potential to adversely impact on the Council's ability to meet its affordable housing targets and is considered by BNP Paribas Real estate and the Council to be a blunt tool that does not appropriately deal with the viability of schemes in the Borough. That is, in some instances the VBC goes too far and reduces the quantum of affordable housing from a scheme more than the viability of the scheme could deliver and in other instances might not go far enough in assisting a scheme with significant development complications. On this basis, we consider that the Council's approach in policy D.SG5 more appropriately allows for schemes to make a positive contribution towards the Council's aims for a site, its local area and the borough as a whole by considering submissions of site specific financial viability assessments. This will ensure that schemes deliver the 'maximum reasonable' proportion of affordable housing on sites.
- 8.10 Policies D.ES5 and D.ES6 set out that development is required to demonstrate how it reduces the amount of water usage, run-off and discharge from the site, through the use of appropriate water reuse and SUD techniques. Policy D.ES7 'A Zero Carbon Borough' sets out the CO2 emission reduction standards that development is required to meet. This ensures that following the revocation of the Code for Sustainable Homes, new development still contributes towards lowering energy use and carbon emissions. The results of our appraisals identify that SUDs, accessible units and sustainability requirements impact on the viability of schemes and in some cases the cumulative impact of these policy requirements is identified as being the tipping point for schemes' viable delivery. Our appraisals identify that in some instances when these requirements are incorporated, the levels of affordable housing reduce marginally (by a maximum of circa 5%) to accommodate them. We would however highlight that the accessibility requirement is tested on all units in the scheme, whilst Policy D.H3 'Housing and Quality Standards' only requires the provision of 10% of homes to be wheelchair accessible'.
- 8.11 BNP Paribas Real Estate would also highlight that the technology and methods to deliver sustainability measures continues to be researched and developed. In line with recent trends and as widely acknowledged by the industry, such costs are likely to continue to reduce in the future as new technology and methods of attaining sustainable development are discovered.
- 8.12 Policy D.H2 identifies at part 5 (a) that, "*Estate regeneration development schemes are required to: a. protect and enhance open space, community facilities and the existing quantum of affordable and family units; b. provide an uplift in the number of affordable homes; and c. bring existing homes up to the latest decent homes standard.*" Given the evidenced acute need for net additional affordable homes in London and the borough it is vital that the Council is able to both protect existing numbers of affordable housing provided on estates as well as the ability to seek an increase in the provision of affordable housing in developments wherever feasible and viable.

- 8.13 Estate regeneration schemes are known to incur significant costs associated with site assembly including but not limited to decant, disturbance and home loss payments and acquiring freehold properties purchased under the right to buy. We also understand that the freehold of many estates have been transferred to RPs from the Council at 'nil value'. Thus every estate regeneration scheme will be unique and developments will continue to come forward in the borough with proportions of market housing included to cross subsidise the re-provision of the existing affordable housing on the estate. However, where this cross subsidy is not able to deliver increased quantum of affordable housing, Policy S.H1 will enable developers and RPs to submit a viability assessment to support their case, as frequently happens on such sites. Clearly there will be a limit to the delivery of units on a site due to the constraints of bulk and massing and a site may not be able to provide enough additional private housing to support both the re-provision of existing units as well as up to 50% of the net additional homes as affordable units.
- 8.14 We consider that in light of the acute need for more affordable units the requirements of the Council's policies D.H2 and S.H1 for estate regeneration is reasonable and deliverable. The allowance for the consideration of viability on such schemes is vital as this enables frank discussions between the Council and RPs/developers on site and scheme specific issues considered on a case by case basis.
- 8.15 The results of our appraisals of PRS schemes indicate that viability varies greatly across the borough in such schemes. Some developments, subject to their benchmark land values and rental levels are able to achieve higher quantities of affordable housing showing viability of up to the higher strategic target of 50% affordable housing. As can be expected however, some schemes are also identified as having challenging viability, regardless of the Council's affordable housing policy i.e. they are identified as being unviable at 0% affordable housing. Such sites are unlikely to come forward for development as PRS schemes as they are more valuable in their existing or an alternative use. We are also aware that PRS schemes vary from scheme to scheme with some being more variable assets due to not only rental levels but operators' being able to achieve greater economies of scale on management costs etc.
- 8.16 As with conventional sale schemes our appraisals indicate that the affordable housing targets can be delivered in some circumstances and setting a lower target would not result in the optimum outcome in terms of total numbers of affordable units delivered. In light of this position and given the high need for affordable housing in the Borough and London, we consider that the Council's flexible policies (Strategic Policy D.H1 and Policy S.G5) which allow for schemes to be considered on a scheme-specific viability basis will ensure the ensure the delivery of PRS schemes in the borough, whilst still ensuring the maximum reasonable quantum of affordable housing is delivered in the range of appropriate housing developments coming forward.
- 8.17 Our assessment of the 14 strategic sites has concluded that the large majority of the sites can viably deliver the THDLP's emerging policies. With regard to the small number of unviable sites we have undertaken viability testing to determine that the Council's emerging policies will viably allow all bar one of these sites to come forward. However with respect to this one site, it has been demonstrated that it is not the Council's policies that are rendering the site as unviable.
- 8.18 The flexibility of the affordable housing policy facilitates consideration of site specific issues to ensure schemes they can come forward whilst delivering the maximum reasonable quantum of affordable housing (e.g. the scheme tested on Site 13 Millharbour South can viably deliver between 20% and 25% affordable housing). Further, some sites such as Site 2 Bow Common Gas Works and Site 11 Leven Road Gas Works may have significant abnormal costs associated with their redevelopment. Our assessment of Site 2 Bow Common Gas Works has identified that where a developer has sought to reduce the purchase price of the site to allow for the considerable decontamination costs likely to be required on the gas works site, the scheme is deliverable as a wholly private scheme generating a surplus of £4.898 million, which could fund between 0 - 5% affordable housing. Alternatively, the land owner would undertake the works themselves recovering the costs

through the sale of the site. On the basis of the same assumption, site 11 Leven Gas Works is identified as being able to deliver circa 25% affordable housing in conjunction with the Council's other policy requirements.

- 8.19 Our testing of the impact of Policy D.EMP2, which requires major commercial and mixed use schemes to provide at least 10% of commercial space as "affordable workspace", on a number of the strategic sites has identified that this requirement can viably be accommodated.
- 8.20 The NPPF identifies at Para 173 that, "*Pursuing sustainable development requires careful attention to viability and costs in plan-making and decision-taking. Plans should be deliverable.*" On the basis of the results of this study, BNP Paribas Real Estate considers that the Council's policies build in an appropriate level of flexibility both specifically where policies have cost implications as well as identifying an overarching flexible approach to the implementation of the Local Plan to deal with "*wider changes that will inevitably occur during the Lifetime of the Plan*". BNP Paribas Real Estate supports the Council's flexible approach to the implementation of its policies which allows the Council to strike a balance between achieving its sustainability objectives, including meeting needs for affordable housing and ensuring that developments generate competitive returns to willing landowners and willing developers. We consider that this approach will assist the Council, as and where appropriate, in lightening the "*scale of obligations and policy burdens*" (Para 174 of the NPPF) to ensure that sites are, as far as possible, able to be developed viably.
- 8.21 This study demonstrates that the Council's existing flexible approach to applying the affordable housing and sustainability policy requirements ensures that these objectives are balanced appropriately to facilitate the growth envisaged by the Council's plans throughout the economic cycle.

Appendix 1 - Policy sift of Tower Hamlets Draft Local Plan

Policy Ref	Policy Name	Comments and analysis of policy costs
Policy S.SG1	Areas of growth and opportunity within Tower Hamlets	A range of testing has been undertaken and applied to development in all areas of the borough.
Policy D.SG4	Construction of new development	Costs considered to form part of standard costs associated with delivering developments in London and Tower Hamlets.
Policy D.SG5	Developer contributions	We have allowed for appropriate S106 and adopted CIL contributions to deliver necessary infrastructure to support development along with costs of sustainable development and SUDS as advised by WTP.
Policy S.DH1	Delivering high quality design	Cost predominantly considered to be related to good design of schemes and therefore incorporated within base build costs as schemes are expected to deliver good design as standard.
Policy D.DH7	Density	Cost predominantly considered to be related to good design of such schemes and therefore incorporated within base build costs as schemes are expected to deliver good design as standard.
Policy S.H1	Meeting housing needs	The viability testing reflects the range of developments likely to come forward in the Borough over the life of the Plan. The viability study tests the council's affordable housing policy requirements of 35% - 50% as well as sensitivity testing lower percentages. We have also tested different affordable housing tenure mixes. We have reflected an appropriate range and mix of units in the typologies tested reflecting the Council's identified need.
Policy D.H2	Affordable housing	We have also tested the appropriate tenure splits as set out in the Council's emerging policy as well as sensitivity testing different tenures within these splits. We have tested appropriate affordable housing unit sizes and mix as advised by the Council. We have adopted the same build costs for the affordable units as the private units thereby testing the delivery of housing built to the same standards.
Policy D.H3	Housing standards and quality	Cost predominantly considered to be related to good design of schemes and therefore incorporated within base build costs as schemes are expected to deliver good design as standard. However as previously identified we have tested the delivery of units of an appropriate size. We have adopted appropriate extra over costs associated with the delivery of accessible units.

**LB Tower Hamlets emerging Local Plan 2017
Policy sift**

Policy Ref	Policy Name	Comments and analysis of policy costs
Policy D.EMP2	New employment space	We have tested the impact of the requirement for 10% of commercial space to be provided as affordable workspace in a number of the strategic sites.
Policy D.ES5	Sustainable drainage	We have allowed for appropriate S106 and CIL contributions to deliver necessary infrastructure to support development along with costs of sustainable development and SUDS as advised by WTP.
Policy D.ES6	A zero carbon borough	We have allowed for appropriate extra over costs associated with sustainable development and delivering Carbon Zero developments as advised by WTP.

Appendix 2 - WT Partnership Build costs and Policy costs

Introduction

WT Partnership have been requested to assist BNP Paribas in regard to construction costs in assessing the viability of several potential / sample schemes in the London Borough of Tower Hamlets

We were specifically asked to comment upon the base cost building rate per m² of internal gross floor area (GIA) to be used, demolition costs, the additional cost of SUDS and other flood prevention measures, the effect of additional access requirements, the effect of achieving London Plan 35 % carbon reduction and also 45% carbon reduction

Who we are

WT Partnership is one of the UK's leading cost consultants working in both the public and private sector and in the residential market working on schemes from 4 nr to 15,000 units. Please look at our website www.wtpartnership.com for further information

Methodology

WT Partnership used benchmark and published information to use as the basis of the construction costs. WT Partnership act for a number of developers and a number of local authorities in the Central London area so have a wealth of information from which to carry out the assessments

WT Partnership has also referred to published papers to assist in our assessment

1 Element Energy and Davis Langdon Cost of Building to Sustainable Homes report dated September 2013

2 Code for Sustainable Homes and the Housing Standards Review - Environmental Audit Committee prepared November 2013

3 Assessing the cost of life time homes, Department for Communities and Local Government dated July 2012

4 EC Harris's Housing Standards Report for the Department for Communities and Local Government dated September 2014

5 The cost estimation of SUDs published by the Environmental Agency in March 2015

6 Cost benefits of Sustainable Drainage Systems published by Royal Haskoning DHV in July 2012

7 Zero Carbon Hub in partnership with Sweett- "Cost analysis of Achieving Zero Carbon Standard" published February 2014 and also published in Building Magazine dated 7th February 2014

8 Greater London Housing Standards Review Viability Assessment "by David Locke Associates, Hoare Lea and Gardiner and Theobald dated May 2015

9 BCIS average price schedules

Assessment

General

It should be understood that The London Borough of Tower Hamlets is an Inner London Borough. This effects construction costs in a number of ways including logistics, higher specifications for private housing reflecting the higher residential values, generally higher densities, generally more constrained site, generally brownfield redevelopment of existing buildings which means the requirement for demolitions, potential removal of deleterious and hazardous materials and potential works to existing services

Construction costs are also dependant on the form of procurement used by the developer and the construction market conditions at the time of the development

We have based the review of the costs on 2nd Quarter 2016 with no allowance for inflation. At this time the London Construction market is buoyant but there are indications this may be affected by the recent "Brexit" vote

We have excluded professional fees, latent defects insurance, VAT, contingency and assume these will be added separately into the viability

The 9nr sample schemes vary from 3 nr houses to 400 nr apartments. It should also be understood that due to the densities the heights of buildings will vary and as a principle taller buildings cost more than low rise due to the need to meet building regulations such as the need for sprinklers and the like. From our brief review the sample buildings would appear to vary from 2 storey to 14 storey

Base costs

Base costs- We have reviewed the costs based on two methodologies
BCIS- We took the latest average prices based on no more than 5 years and based on Tower Hamlets location. As the rates are an average over 5 years they may not fully incorporate the latest building regulation requirements and policy requirements such as lifetime homes and the like. BNP Paribas's house base cost is in line with BCIS average. The low rise apartments are slightly higher than the average BCIS by circa 9% and the taller blocks circa 13% higher than the average BCIS. This is in line with our expectations
Similar Project Benchmark- We benchmarked against several schemes in Tower Hamlets and neighbouring boroughs.
Haringey £2572/m² 14 storey, similar to sample 9, Newham £2477/m² similar to sample 9
Lambeth £2,050/m² similar to sample 8
Tower Hamlets £2218 similar to sample 7 and 8, Newham £2282/m² similar to sample 7
Lambeth £2302/m² similar to sample 6, Islington, £1901 similar to sample 6
Tower Hamlets £2058/m² for apartments similar to sample 5
Tower Hamlets £1714/m² similar to sample 3 and 4
We could not find suitable benchmarks for samples 1 and 2 in Central London

The outcome of our review is that on

Sample 1 BCIS is the only basis we could reasonable basis and BNP Paribas base rate cost per m² appears reasonable

Samples 2, 3, 4 probably allowance should be £1700/m² rather than £1690/m²

Sample 5 base rate cost per m² appears reasonable

Sample 6, 7, 8 allowance base rate cost per m² appears reasonable

Option 9 cost per m² may be a little low and should be £2500/m²

The above excludes externals and contingency and BHP Paribas's allowances of 15 % and 5% appear reasonable

It should be understood there maybe sites where there may be significant abnormal cost items such as re-building a river wall , large scale contamination, asbestos or a major service diversion and a view needs to be taken on these abnormal elements on a site by site basis

CO2 requirements

Additional CO2 requirements. As this is a new requirement there is no historic information available to assess the cost impact. We arrived at our assessment based on a review of

several publications- Zero Carbon Hub in partnership with Sweett- “Cost analysis of Achieving Zero Carbon Standard” published February 2014 and also published in Building Magazine dated 7th February 2014 and “Greater London Housing Standards Review Viability Assessment “ by David Locke Associates, Hoare Lea and Gardiner and Theobald dated May 2015

The Greater London Housing Standards Review Document refers to an increase of circa 1 to 1.5% on construction costs to achieve 35% CO2 reduction standard. This is based on the whole of Greater London Authority (GLA) area and in our opinion Tower Hamlet being an Inner London Borough would be at the upper end of this assessment **therefore in our opinion 1.5% add on is appropriate to achieve 35% CO2 reduction**

From Sweets paper the average UK cost to achieve zero carbon is circa £3100 per unit (based on an average of houses and apartments at 2016 price levels) and when you add a London regional weighting this is circa £3900 per unit for London which equates to circa 2% mark up on the average rates used by BNP Paribas. When you consider Tower Hamlets is an Inner London Borough **in our opinion a mark -up of 2.5% would appear appropriate to achieve 45% CO2 reduction**

The Element Energy/ Davis Langdon study of August 2013 predicted a cost of circa in 2016 of £4,000 per unit for 35% and £6,000 for 45% and the costs above work out around £3,000 per unit for 35% and £3900 per unit for 45% so a little lower but at a similar level

SUDs and attenuation

SUDs and attenuation- the costs of Suds and attenuation are very much dictated by the size of the site, density and ground conditions. It is also dependant on the approach the developer undertakes e.g. using green roofs, permeable paving, simple rainwater harvesting, swales, or water storage etc.

The sample sites being reviewed vary from 3 units to 400 units. We have reviewed published papers and these indicated that the capital costs of SUDs would be circa £500 per unit or circa 0.30%

We have benchmarked against several projects and cannot give details of the projects as the information is confidential. We can however give post code and size of project- Large - E16- value £300M- 0.34%, Nine Elms-£149M - 0.32%, Nine Elms -£125M- 0.28%, Harrow £70M- 0.32%, E5- £11M- 0.44%, SW18 -£25M -0.58%, N17 £150M – 0.20%. This gives an average of circa 3.50%

There are many other projects we looked at where it is difficult to isolate and identify items of work relating to the policy requirements and as stated above there are also many options open to a developer to meet these requirements and our assessment can only be considered an opinion as to a reasonable allowance

We are therefore of the opinion an allowance of 0.40% is a reasonable allowance

Demolitions

The cost of demolitions is very much dependent upon what is on the existing site, size of site, logistic issues relating to the site and the like

The cost of demolition of buildings depends on their construction and structure, shape and height, whether is an existing basement, amount of existing materials which are recyclable and the like

In July 2015 BNP Paribas did a study for Southwark which indicated costs demolitions of buildings averaged circa £80/m² of the GIA of buildings as at an average date of 1st Quarter 2014 which would be £92/m² based on 2nd Quarter 2016 rates using BCIS tender index for London

The study also indicated that on average the demolitions were circa 2% of the construction costs

Recent advice from a Demolition Contractor indicated £30-40/m³ of a building which is slightly higher than the average in the study but using 2% of construction costs would in our opinion be a reasonable approach as construction costs would also have increased proportionately over that period

In order to test this basis we took a sample of the 7nr latest projects we have reviewed and this showed the percentage of construction costs represented by demolitions was Lambeth 25 storey building 0.45%, 19 storey building Haringey 1%, 6 storey building Harrow 2.70%, 12 storey building Newham 3.30% . tall building Tower Hamlets 0.77%, tall building Tower Hamlets 0.22% , 5 storey building Tower Hamlets 3.92 % average is circa 1.76% The sample schemes provided tend to at the lower end of the storey heights of the buildings benchmarked against. **In our opinion this shows that using an average of 2% of construction costs to represent the cost of demolitions is a reasonable approach**

Accessibility

There is no historic date to indicate the costs of new step free requirements

The cost of providing step free access to a block of apartments over 3 floors is very small as a lift would normally be provided for a scheme over 4 floors and it would only require a step free ramped access at the entrance which would be a minor cost

The cost of providing step free access to low-rise developments where a lift would not be part of a scheme would be disproportionately expensive as you would need to add in a lift and ramps. This would include providing external ramp, lift pit, lift core and overrun, lift installation to which you need to add Contractor's overheads and profit and preliminaries and in our opinion would cost in the order of £100,000 for samples 2, 3 and 4

The Greater London Housing Standard Review, Viability Assessment dated May 2015 indicates an increase in cost of between 2-2.4% of the construction costs to provide step free access in low rise developments. This would equate to circa £40,000-50,000 based on samples 2, 3 and 4 which in our opinion could only be achieved on a two storey scheme using a platform type lift but not on a three storey block using a standard lift

In our opinion for use in the viability assessment on step free access to samples 2, 3 and 4 a £100,000 addition should be used

26th August 2016
WT Partnership

CO2 requirements

Additional CO2 requirements.

After the preparation of our draft report we were provided with a document, LBTH Carbon Policy Evidence Base prepared by Etude on behalf of The London Borough of Tower Hamlets dated August 2016. We have reviewed this document to see if its findings affect our draft report in terms of construction costs

This document refers to the Greater London Housing Standards Review Viability Assessment "by David Locke Associates, Hoare Lea and Gardiner and Theobald dated May 2015 and Zero Carbon Hub in partnership with Sweett- "Cost analysis of Achieving Zero Carbon Standard" published February 2014 which we have referred to

The Etude report looks at three building types high rise , medium rise and terraced houses and used typical dimensions and designs and is therefore does not relate to actual projects within the London Borough of Tower Hamlets and does not necessarily relate to the samples being reviewed by BNP Paribas

The report relies upon cost models prepared by Gordon Hutchinson, Chartered Quantity Surveyors

The report states that the minimum additional cost is as follows

£3,337 for medium rise flats sample 3960m², 6 storeys, 48 apartments (i.e. 2.4% of the reference costs);

£1,102 for high rise flats sample 8.000m², 25 storeys, 96 apartments (i.e. 0.6% of the reference costs)

£4,713 for terraced houses 840 m², 3 storeys, 5 houses (i.e. 1.7% of the reference costs)

The report states the maximum additional cost for achieving the policy based upon the works being undertaken on site is

up to £13,533 for medium rise flats (i.e. up to 9.8% of the reference costs);

up to £11,905 for high rise flats (i.e. up to 6.5% of the reference costs);

up to £34,729 for terraced houses (i.e. up to 12.8% of the reference costs).

We would concur that to achieve the policy using site based initiatives would be considerably more expensive than an off-site solution/contribution

We would also state in our opinion to achieve an on -site strategy will be very difficult due to the nature of many of the sites in terms of density , site restrictions, logistics and the like especially in an inner city Borough such as Tower Hamlets

However we do not agree the comments in regard to the difference between GLA and LBTH policy as we are of the opinion due to the nature of many sites to achieve the LBTH more onerous policy will be more difficult to achieve

In terms of the costs and basis we would comment below

We are of the opinion from the projects we have undertaken and reviewed that 36% glazing to a medium rise block is low, the 47% for the high rise block is more in-line with what we would expect

The costs are based on 3rd Quarter 2016 and include preliminaries at 20% which is 2-4% higher than the norm in LBTH. The contingency at 15% is circa 10% than the norm allowed for appraisal purposes at planning stage for LBTH

Medium Rise-Although the allowances stated in the previous paragraph are high the reference costs for medium rise buildings in at £1677/m² from our benchmarks are low and would be more in the order of £2250/m² being a 35% difference.

In our opinion the option cost do not appear to be unreasonable

This would have the effect of reducing the minimum to circa 1.60% and the maximum to 6.50%

High Rise-Although the allowances stated in previous paragraphs are high the reference costs for high rise buildings in at £2292/m² from our benchmarks are low and would be more in the order of £2700/m² being a 18% difference. Please note the sample 9 in our report is circa 14 storeys and benchmarks around £2400/m²

The option cost in our opinion appear reasonable

This would have the effect of reducing the minimum to circa 0.50% and the maximum to 5.40%

Houses – The reference costs in our opinion do not appear unreasonable, although as pointed out in our report we could not find any comparable benchmarks for this sample type In our opinion the option cost do not appear to be unreasonable
Thus we would concur with Etude's findings on this type 1.7% minimum and 12.8% maximum.

It should be understood that there is no historic data in regard to the particular policy requirement, that Etude's report is based on models not real projects, that developments in LBTH being an inner London borough will have greater restrictions and logistics issues

Taking the above and other information used for our report into consideration on the samples we have reviewed with BNP Paribas **our opinion 1.5% add on is appropriate to achieve 35% CO2 reduction remains for use in the appraisals**

Taking the above into consideration and other information used for our report on the samples we have reviewed with BNP Paribas **in our opinion a mark -up of 3% is appropriate to be used in the appraisals (an increase of 0.5% on the previous report) for the sample projects generally to achieve 45% CO2 reduction and 5% mark up on samples 1 and 5 with houses**
