Summary

This report analyses Experian's Mosaic Public Sector data for Tower Hamlets.

Mosaic Public Sector is a 'geo-demographic' tool which classifies the population into 66 different types based on their socio-economic and lifestyle characteristics. The names and descriptions for the types and groups originate from Experian.

The borough has a very distinct Mosaic Public Sector profile and over three quarters of the borough's households fall into just four Mosaic Public Sector types:

- Almost one third (30%) of Tower Hamlets households are classified as **O65** households – the highest proportion in the UK. These households are likely to be ethnically diverse households with children, living in social rented flats in overcrowded conditions, who are struggling on low incomes. **O65** households are particularly likely to be found in Shadwell where they comprise 60% of all households.
- One in five (21%) of households are classified as **C12**. Residents in these households are highly educated and ambitious 20 and 30-somethings renting expensive apartments, typically on higher incomes. Over 40% of households in Island Gardens and Weavers are **C12**.
- The borough's third largest Mosaic type is **C11** who account for 15% of all households. These households are likely to contain young, high earning professionals who are relatively new to the borough. These households predominate around the riverside and City Fringe areas of the borough: the proportions of **C11** households are highest in the wards of Canary Wharf (67%), Limehouse (57%) and St. Katharine's and Wapping (49%).
- **O64** comprise 1 in 12 households (8%) and are well represented in most wards, though the proportions are highest in Stepney Green (15%) and Bow East (14%). These households are more likely to contain older residents who live alone, in social housing. This group are often on lower incomes and find it difficult to get by financially.

This report provides detailed profiles of the eleven types that predominate in Tower Hamlets – together these comprise 98% of all households.

About the report

‘Mosaic Public Sector gives you a pin-sharp picture of the people you need to reach, reflecting the latest socio-economic trends. Over 850 million pieces of information across 450 different data points are condensed using the latest analytical techniques to interpret and understand.’

This report provides a profile of residents in Tower Hamlets using the Mosaic Public Sector classification.

Experian’s Mosaic Public Sector is a geo-demographic classification tool which aims to provide a broad view of society, describing households in terms of their typical demographics, their behaviours, their lifestyle characteristics and their attitudes. Experian Mosaic Public Sector divides the population into 15 groups which are then further broken down into 66 sub types. This classification provides an indication of the most likely characteristics of people in terms of their socio-demographic lifestyles. For more detail of all these groups please see Appendix 5.

About the Analysis

For the geographical analysis, a cut of the council’s Local Land and Property Gazetteer (LLPG) was given, in May 2016, to Experian, who then matched the addresses of the properties with their data and allocated a Mosaic type to that property record. (As the LLPG has a record for all student accommodation at room level rather than property level this has artificially increased the proportion of this type in the sample.)

Since the LLPG has a grid reference present in the data, this meant the records could be mapped and the proportions calculated for each type in each ward.

The above sample of 130,814 records had entries in 11 groups and 33 sub types, with 11 sub types making up 98.18% of all the coded records. Therefore this analysis has concentrated on these 11 sub types. As the segmentation is a national one, there are some of the groups and sub types which would not be expected within the borough, for example, those with rural characteristics.

This report uses selected characteristics such as household income, length of residency, household type, communication channels and attitudes to recycling to build a profile of the sub types.

Each characteristic has been given an index value with 100 being the national average. Therefore on the characteristic charts, bars to the left show characteristics which are less likely to be present in a type and bars to the right show characteristics which are more likely to be present in the type. A very high index score means that the characteristic is very likely to be present.

The names and descriptions of the types are based on the Experian data.

Please note : The data presented on the characteristics of the Mosaic Public Sector types are the characteristics of the type of people nationally and not specific to Tower Hamlets residents

The borough in context

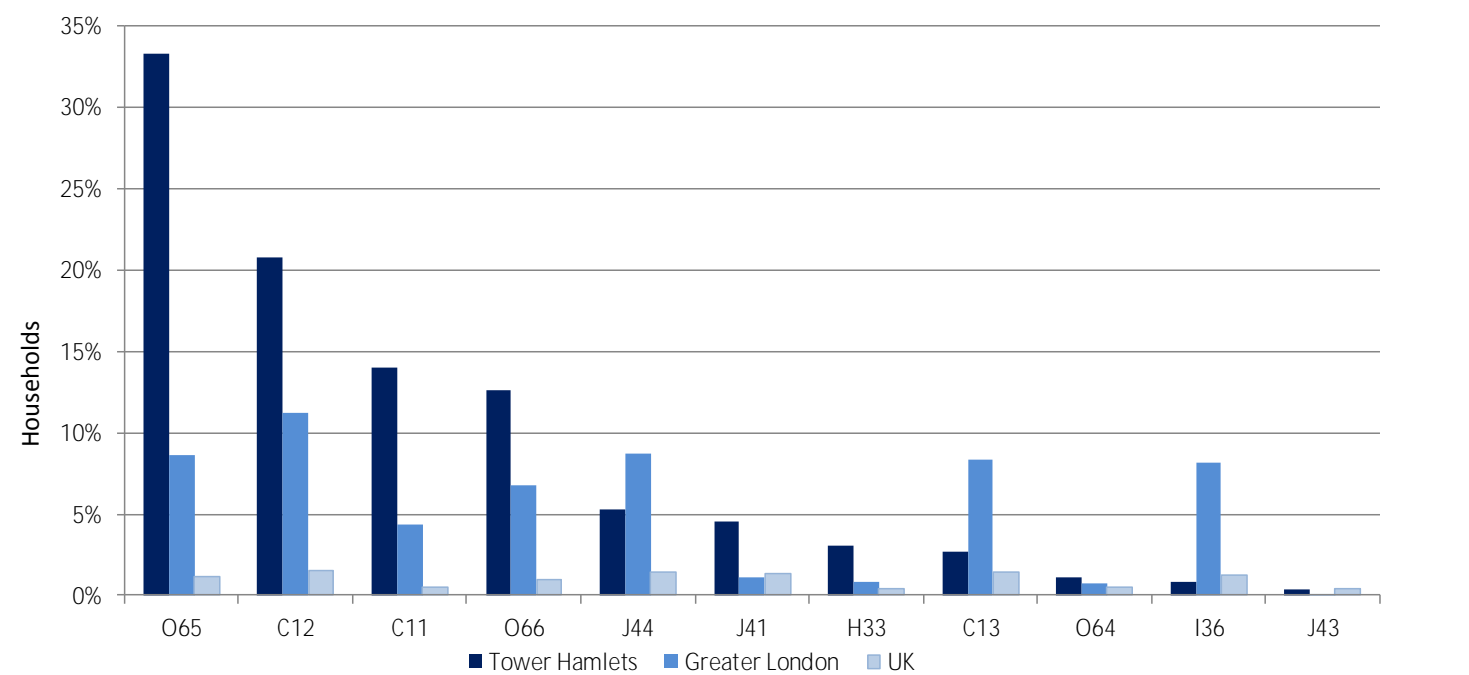

The profile of Tower Hamlets is very different to London and the UK as can be seen from the chart below. Households in Tower Hamlets fall broadly into 5 Mosaic Public Sector groups and 11 sub types. Tower Hamlets has the highest proportion of Type O65, in the UK.

Seven of the Borough's top sub types feature in London's top ten but not necessarily in the same order. However, none of the Borough's top ten types feature in the top ten types for the UK.

Mosaic Public Sector profile for Tower Hamlets, 2016

Summary of the Characteristics of the Top 11 Mosaic Public Sector types in Tower Hamlets, 2016.

Residents or households in each Type share all or some of these characteristics.

O65

Ethnically diverse families with children, living in social housing and in housing need

30.41% of households in the borough

J41

Young renters in City Centre locations close to jobs and night life.

4.56% of households in the borough

C12

Young 'professionals' renting high rent value properties

21.00% of households in the borough

C13

High income households living in high value properties in accessible inner city locations.

2.50% of households in the borough

C11

Professional workers, renting at premium property rent levels and living in landmark/fashionable areas.

14.72% of households in the borough

H33

Young singles and couples with children living in new build homes

2.05% of households in the borough

O66

Older, long term social renters

8.23% of households in the borough

I36

Families with above average income living in ethnically diverse urban communities.

1.35% of households in the borough

J44

Young mobile residents, employed in service sector jobs and living in rented accommodation.

7.50% of households in the borough

O64

Renters of social rented flats in high rise accommodation where levels of need are significant levels of need

0.60% of households in the borough

J43

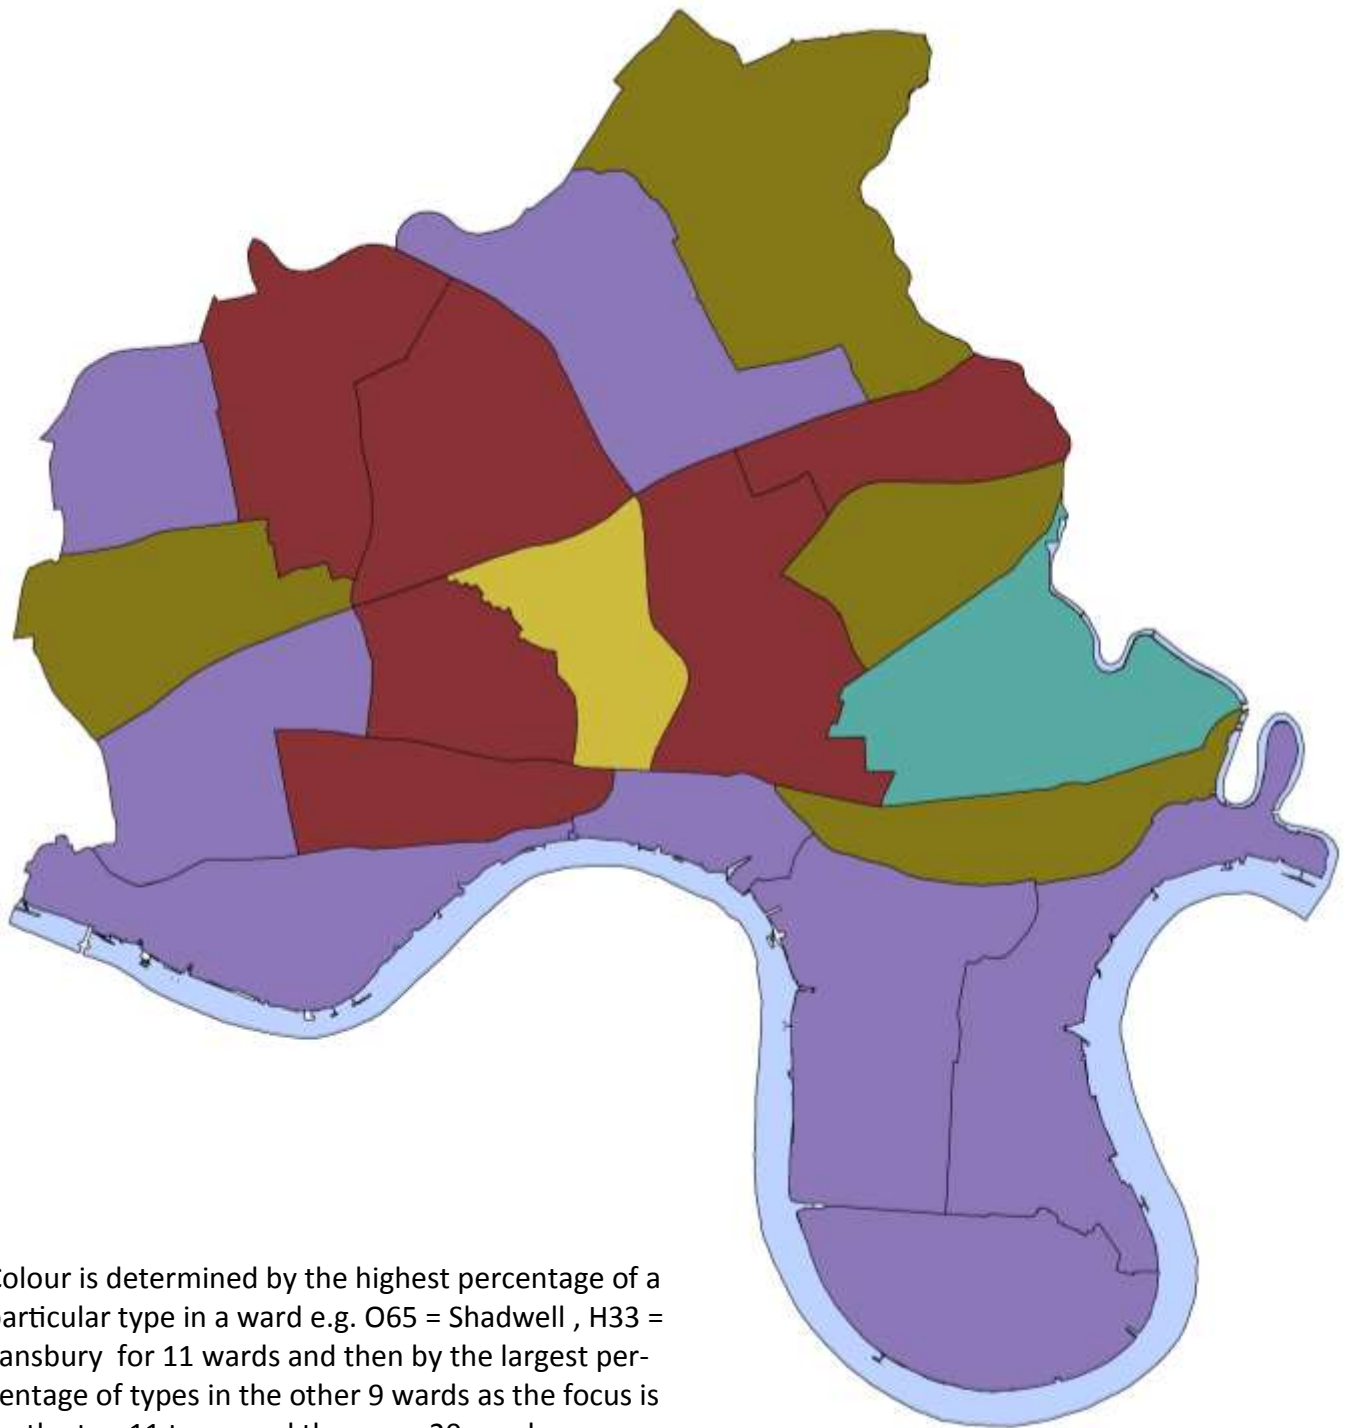

Students living in high density accommodation close to universities and education providers.

4.86% of households in the borough
(household for student = room)

Percentages are based on the 2016 LLPG cut given to Experian to match in May 2016

Description summaries are based upon Experian Mosaic Public Sector profiles

Mosaic Public Sector Types within Wards , 2016

Colour is determined by the highest percentage of a particular type in a ward e.g. O65 = Shadwell , H33 = Lansbury for 11 wards and then by the largest percentage of types in the other 9 wards as the focus is on the top 11 types and there are 20 wards.

© Crown copyright and database rights 2016 Ordnance Survey, London Borough of Tower Hamlets 100019288.

These are families with children who live in small and often overcrowded flats rented from social landlords in inner city areas (particularly London).

This Mosaic type make up 30.4% of all households in Tower Hamlets and account for 60% of households in Shadwell. This type accounts for 109,081 people, 40.41% of the population of the borough in 2014.

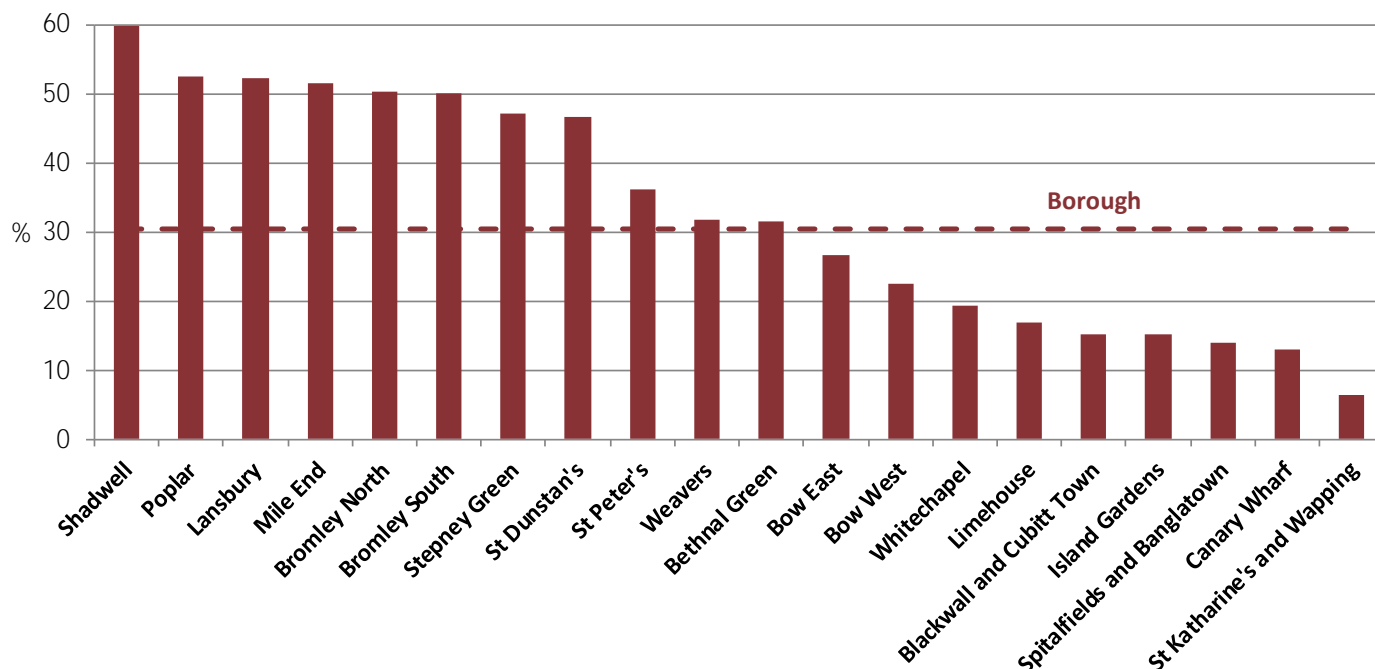

Often these families do not live in traditional nuclear family structure. A significant proportion of the adults were not born in the UK and there is a diverse mix of people from countries all around the world.

Families in this group are most likely to be on low incomes and are very likely to be finding it very difficult to manage on their household income.

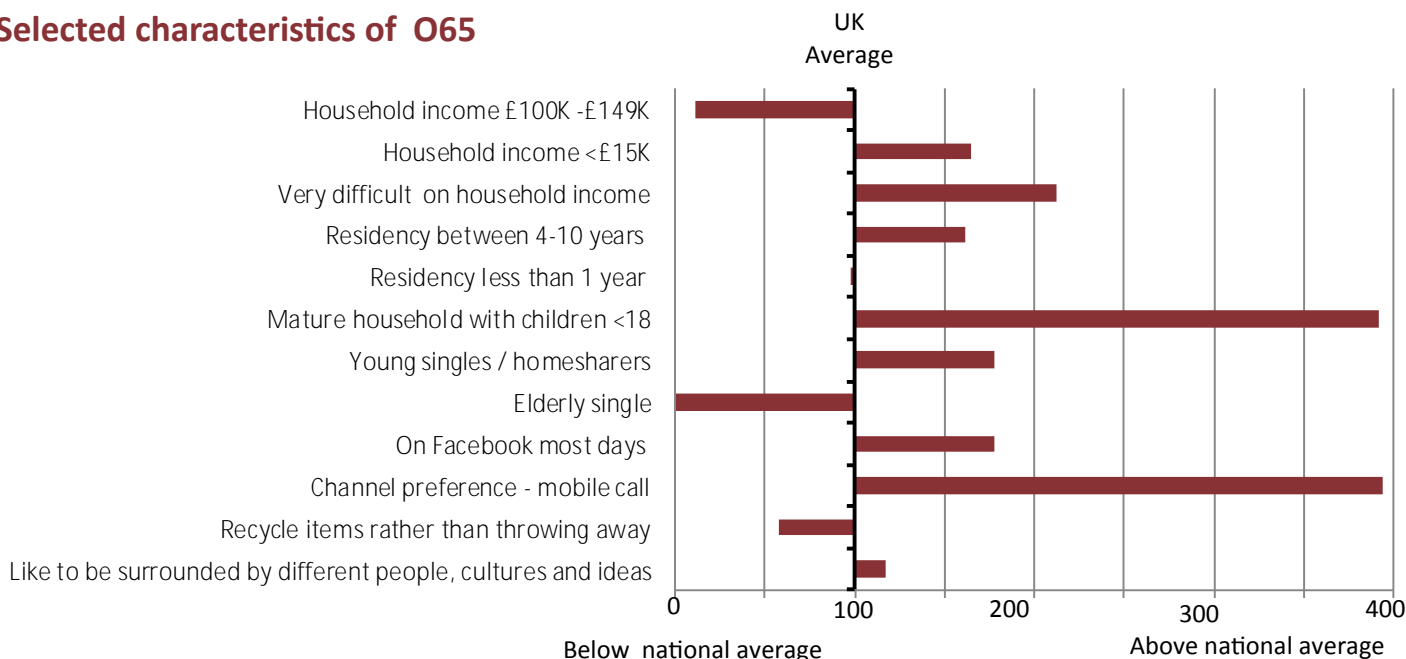

They are likely to use Twitter and Facebook daily and very likely to prefer mobile phones as a means of communication.

They tend not to be concerned about the environment and are the least likely of all the types to recycle.

% of households in each Ward which are in O65

Selected characteristics of O65

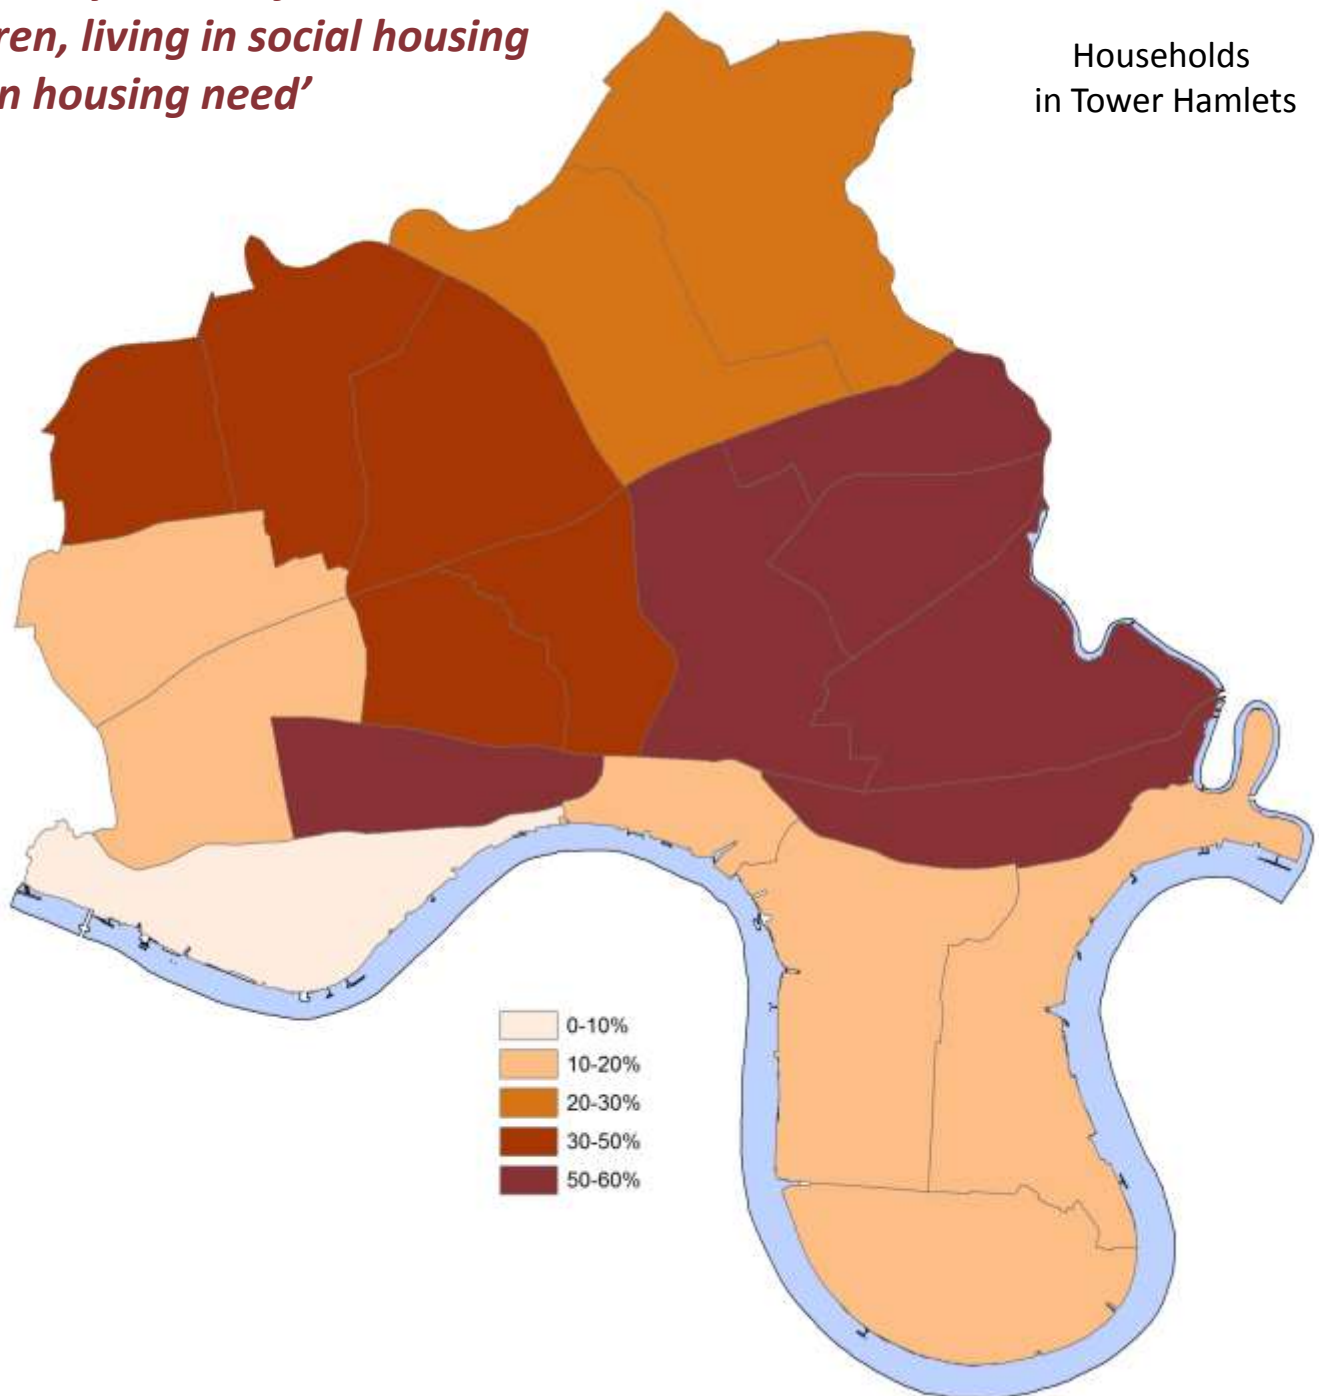

Bars to the right hand side of the UK average show these characteristics are more likely to be present in this group; bars to the left hand side of the UK average show characteristics that are less likely to be present in this group.

‘Ethnically diverse families with children, living in social housing and in housing need’

40,307 (30.41%)

Households
in Tower Hamlets

© Crown copyright and database rights 2016 Ordnance Survey. London Borough of Tower Hamlets 100019288.

Key Features

- Age 36-40
- High diversity
- Many children
- Non nuclear household composition
- Socially rented accommodation

Channel Preference

- Mobile phone.
- Social media, Twitter and Facebook

Residents in these households are highly educated and ambitious 20 and 30-somethings renting expensive apartments, either on their own or with a partner. They are busy forging successful careers living in highly commutable suburbs of Inner London and other economically thriving and upmarket cities.

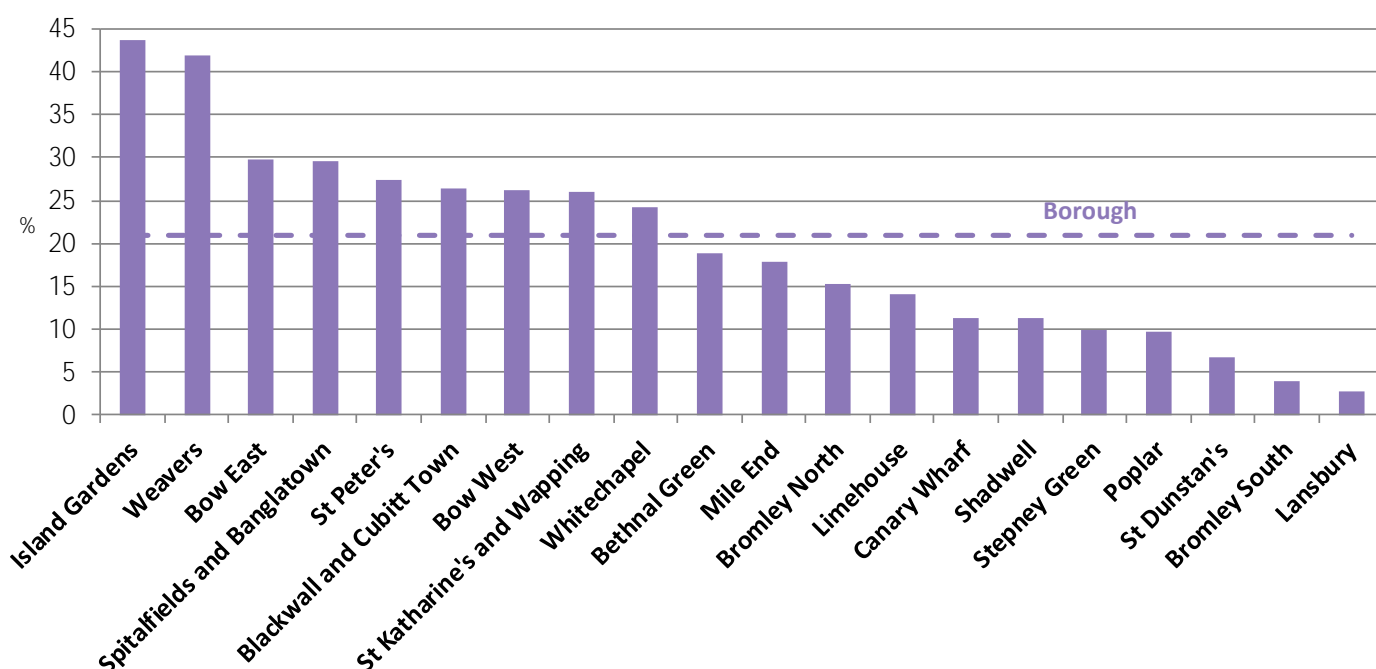

This type make up 21% of all households in the borough, increasing to over 40% of households in Island Gardens and Weavers. This type accounts for 48,708 people, 18.04% of the population of the borough in 2014.

They are more likely to come from diverse backgrounds and may have children. Residents in this group are more likely to be employed in higher professional occupations, to be in work and to be in social grade A. They are likely to have a household income of between £50,000 and £150,000.

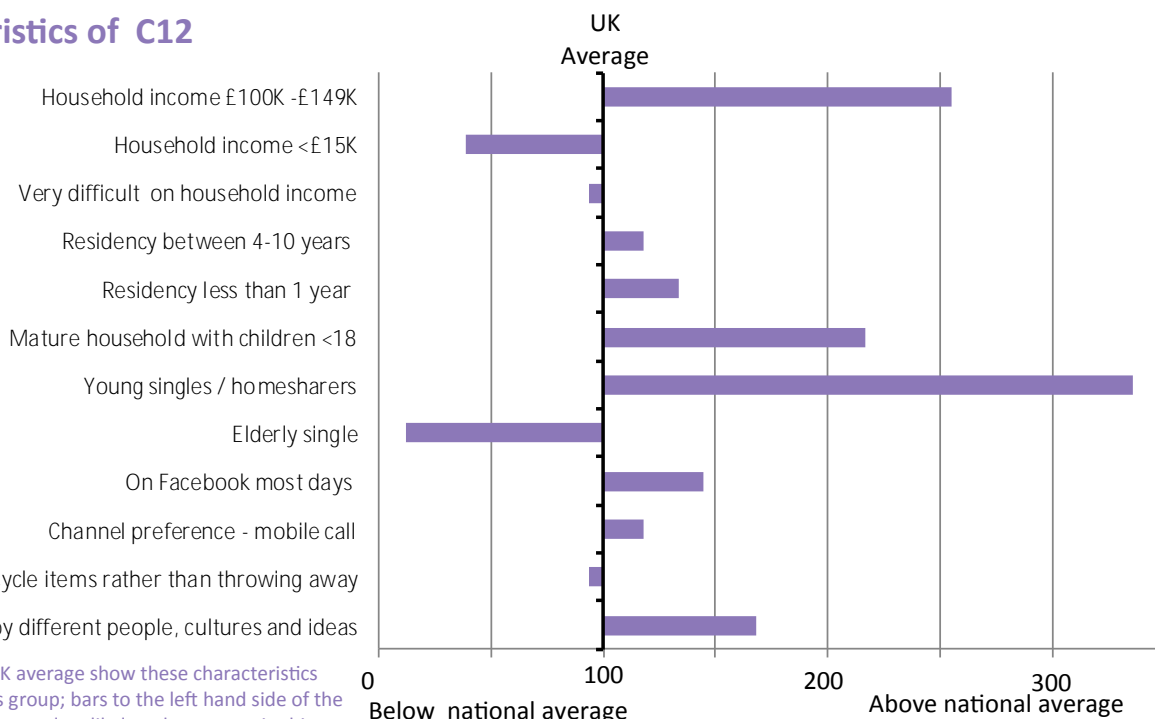

This household type is more likely to use email as a means of communication than mobile phone.

Green issues are well understood by this type, but they are not always as green as they could be in their behaviours.

% of households in each Ward which are C12

Selected characteristics of C12

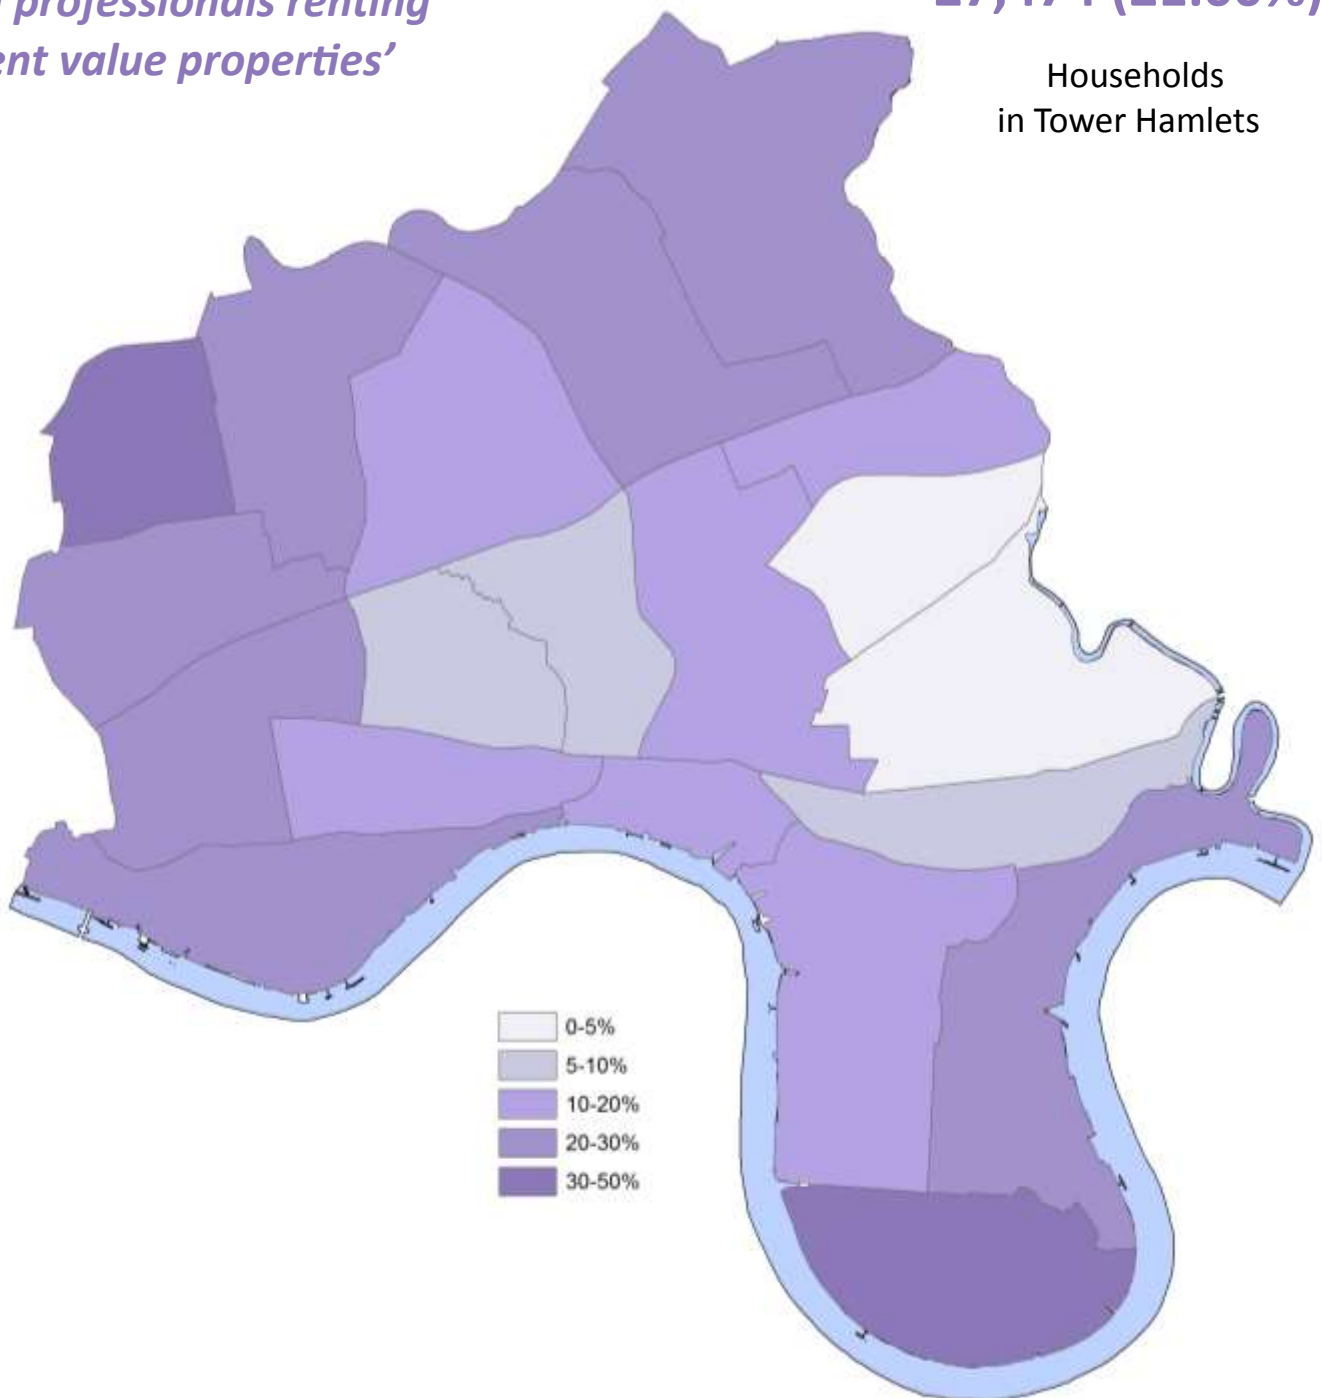

Bars to the right hand side of the UK average show these characteristics are more likely to be present in this group; bars to the left hand side of the UK average show characteristics that are less likely to be present in this group.

‘Young professionals renting high rent value properties’

27,474 (21.00%)

Households
in Tower Hamlets

© Crown copyright and database rights 2016 Ordnance Survey, London Borough of Tower Hamlets 100019288.

Key Features

- Aged 20 –30
- Highly educated young professionals
- High diversity
- Private rented accommodation
- Home sharers
- IT savvy

Channel Preference

- Email
- Mobile phone
- Facebook
- High internet usage
- Landline

These are young, highly successful City workers renting in prestige locations in Central London. They earn spectacular salaries from demanding jobs in the City pay for their premium-priced flats and their work hard, play hard lifestyles.

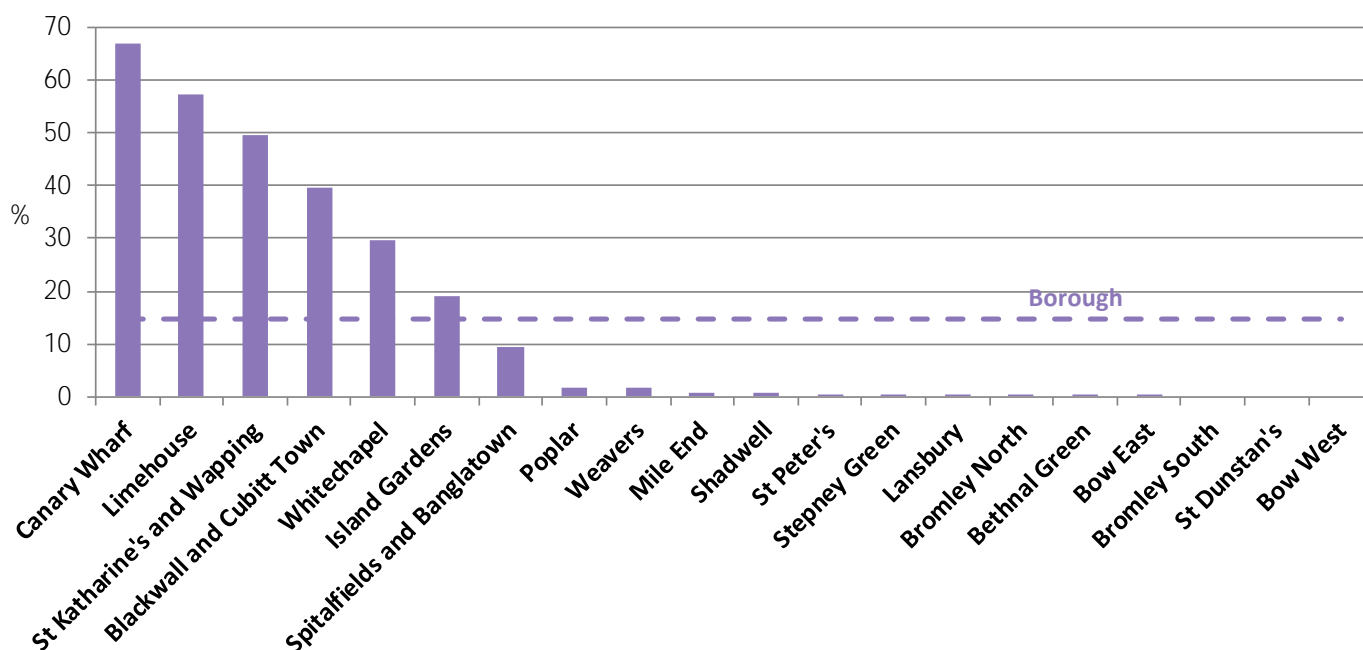

This type make up 19,255 (14.72%) of households in the borough. Canary Wharf has the highest percentage of households in this type (60%) but there are also high concentrations in Limehouse (57%) and St. Katherine's & Wapping (50%). This type accounts for 27,859 people, 10.32% of the population of the borough in 2014.

Residents in this type are very likely to be under 35 and often living alone or in flat shares and are very mobile due to short term rent agreements.

They are very likely to be in professional occupations, be in Social Grade A and are less likely to have children. People in this group are more likely to have very high household incomes of £100,000 and above.

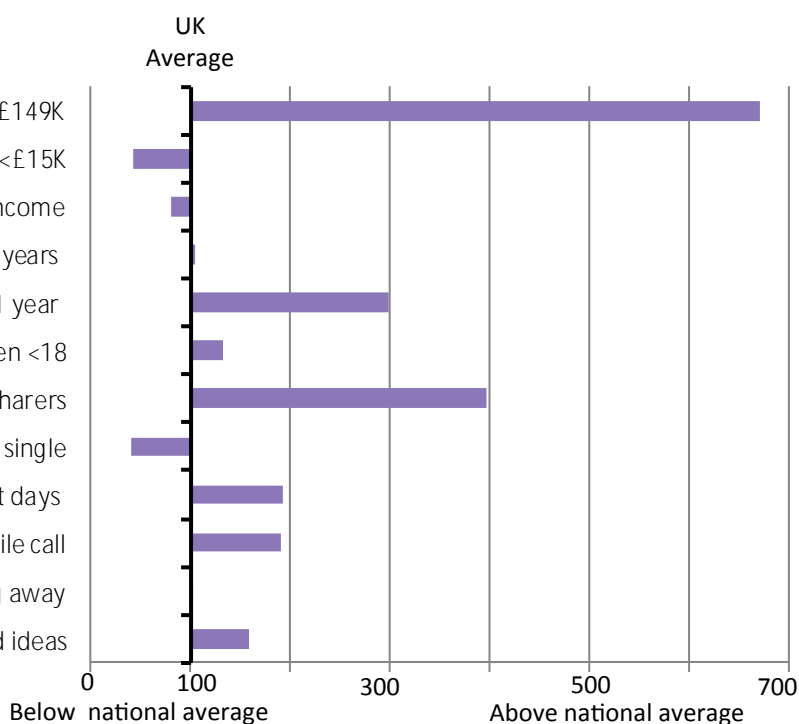

They have a good understanding of key environmental and climate change issues and are more likely than average to generally adopt green behaviours.

% of households in each Ward which are in C11

Selected characteristics of C11

Household income £100K -£149K
 Household income <£15K
 Very difficult on household income
 Residency between 4-10 years
 Residency less than 1 year
 Mature household with children <18
 Young singles / homesharers
 Elderly single
 On Facebook most days
 Channel preference - mobile call
 Recycle items rather than throwing away
 Like to be surrounded by different people, cultures and ideas

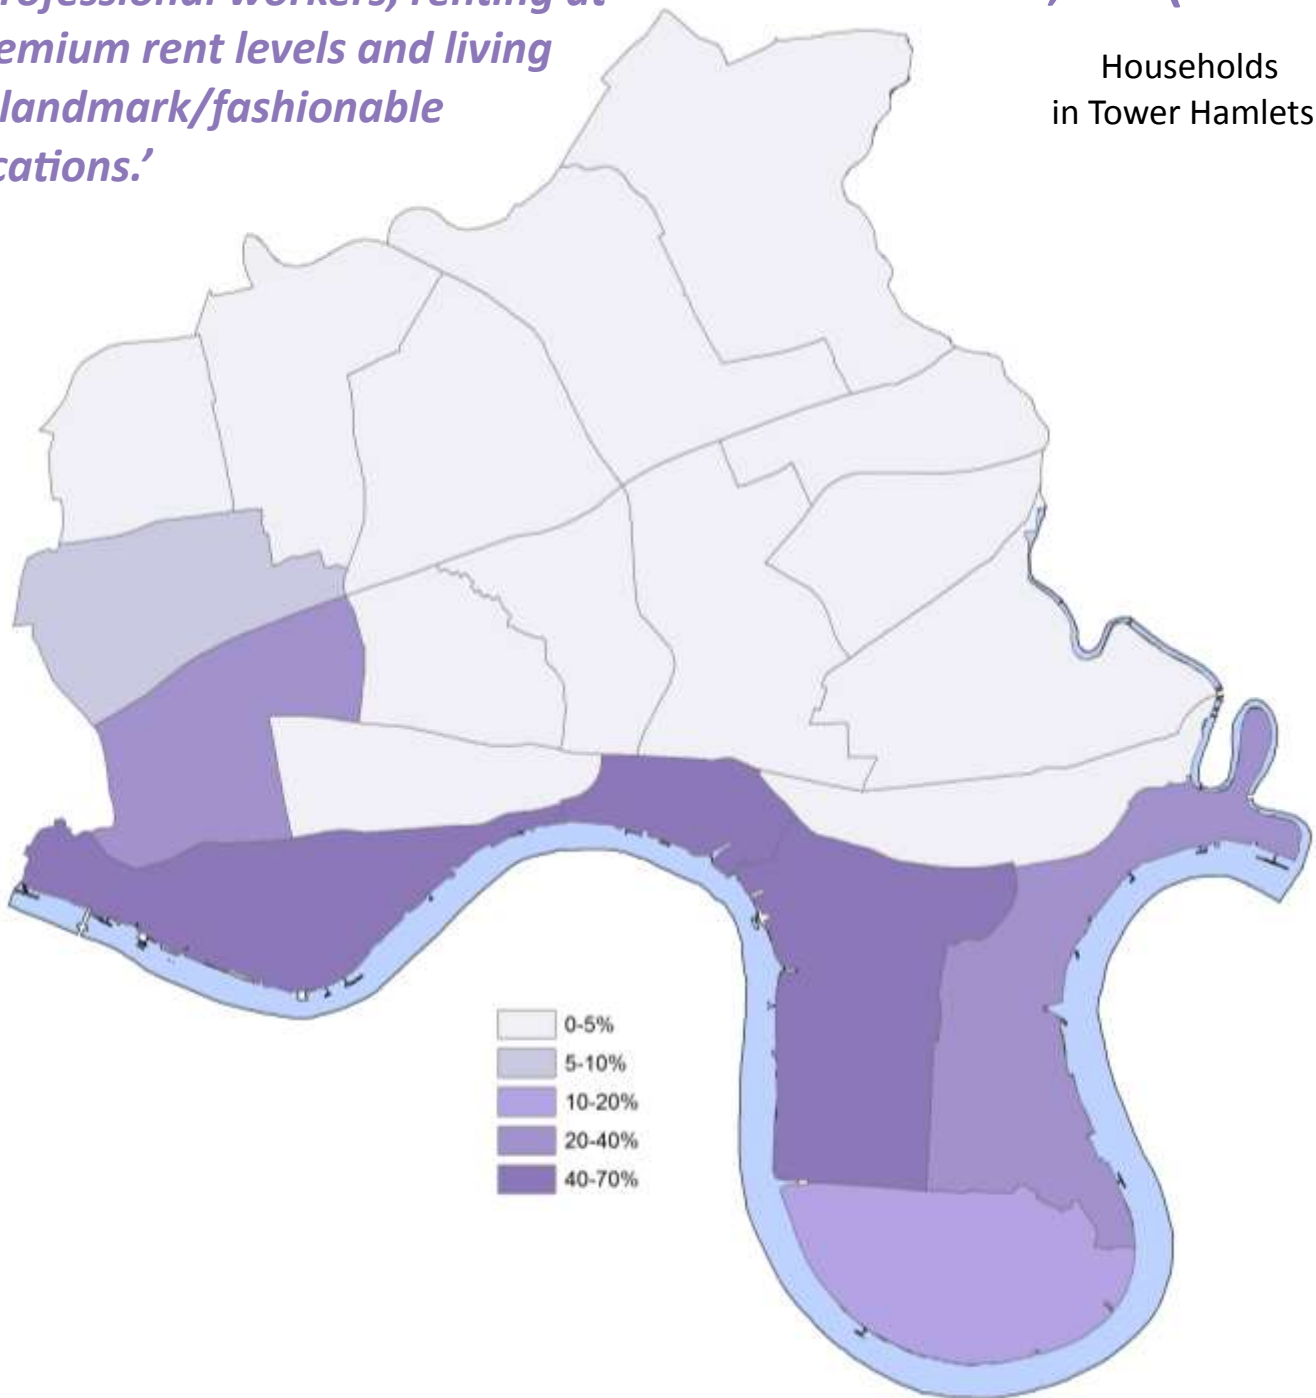

Bars to the right hand side of the UK average show these characteristics are more likely to be present in this group; bars to the left hand side of the UK average show characteristics that are less likely to be present in this group.

‘Professional workers, renting at premium rent levels and living in landmark/fashionable locations.’

19,255 (14.72%)

Households
in Tower Hamlets

© Crown copyright and database rights 2015 Ordnance Survey, London Borough of Tower Hamlets 100019288.

Key Features

- Age 26 –35
- Highly educated professionals
- High diversity
- Private Rented Accommodation
- Few children

Channel Preference

- Mobile phone
- SMS (mobile messaging)
- Twitter and Facebook

Residents in these households are long-term renters, typically aged over 55 and often single, who live in centrally -located inner city social housing, usually in London. Now pensioners or approaching retirement, these long standing older residents have witnessed many changes in their local communities.

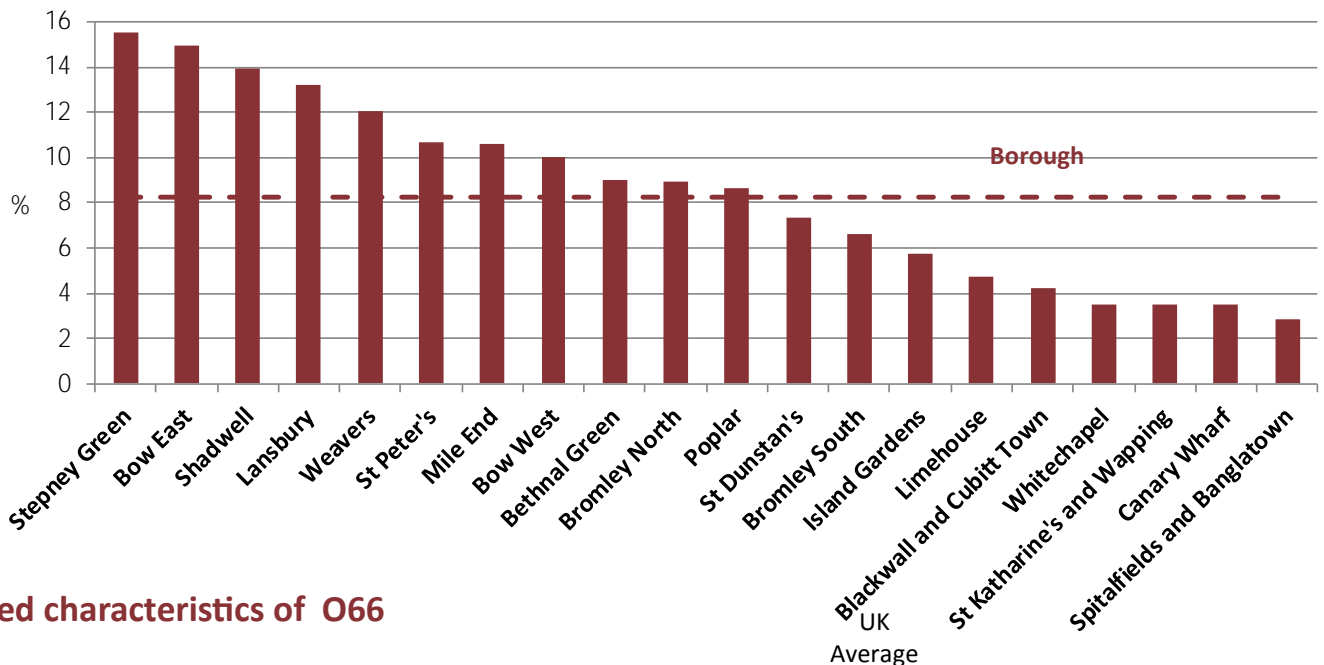

There are 10,763 (8.23%) households in this type in the borough. Stepney Green and Bow East have the highest proportions (both around 15%). This type accounts for 29,931 people, 11.09% of the population of the borough in 2014.

They are more likely to be on low incomes and also find it difficult to survive on their household income. They are more likely to be single households and less likely to have young children in their household, as they tend to be much older. They are more likely to have lived in their homes for over 10 years.

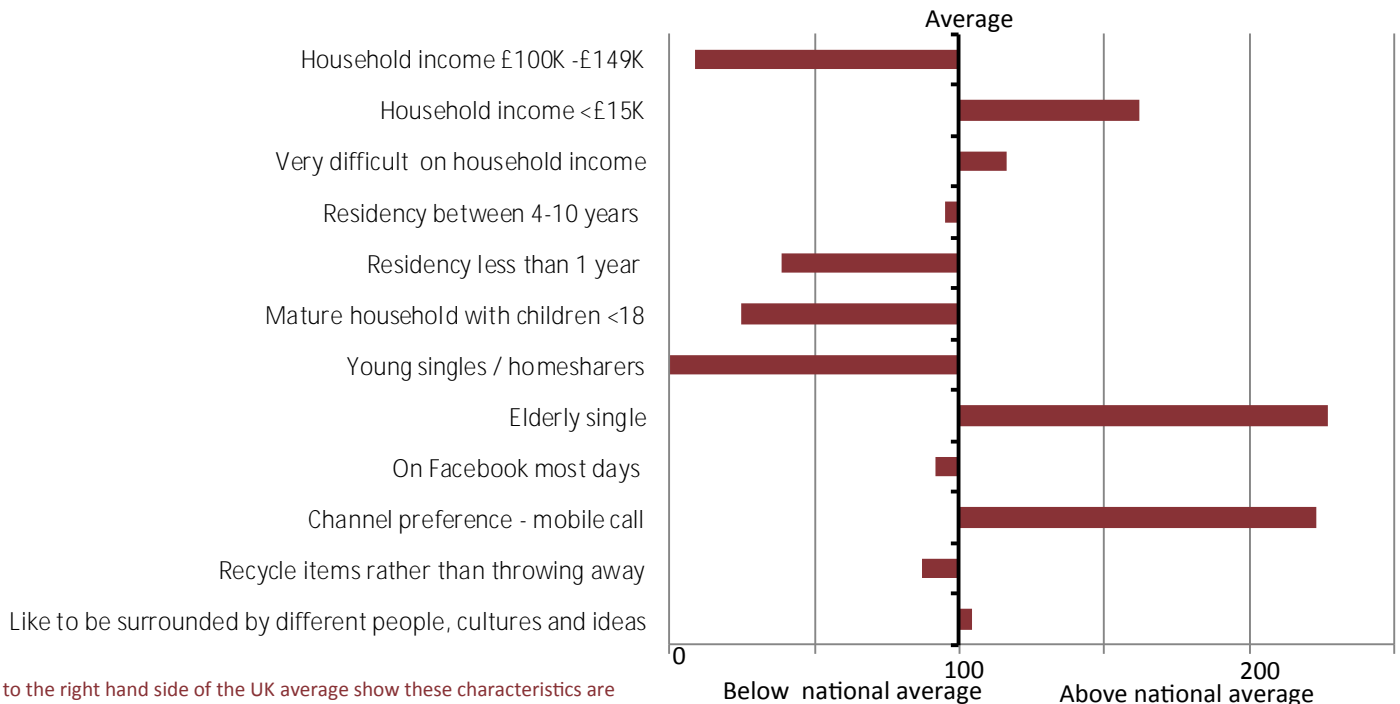

They read newspapers and watch TV to stay informed but are less likely to use the internet widely and very likely to use a mobile phone.

Their knowledge around key environmental challenges and efforts to be green are generally below average.

% of households in each Ward that are O66

Selected characteristics of O66

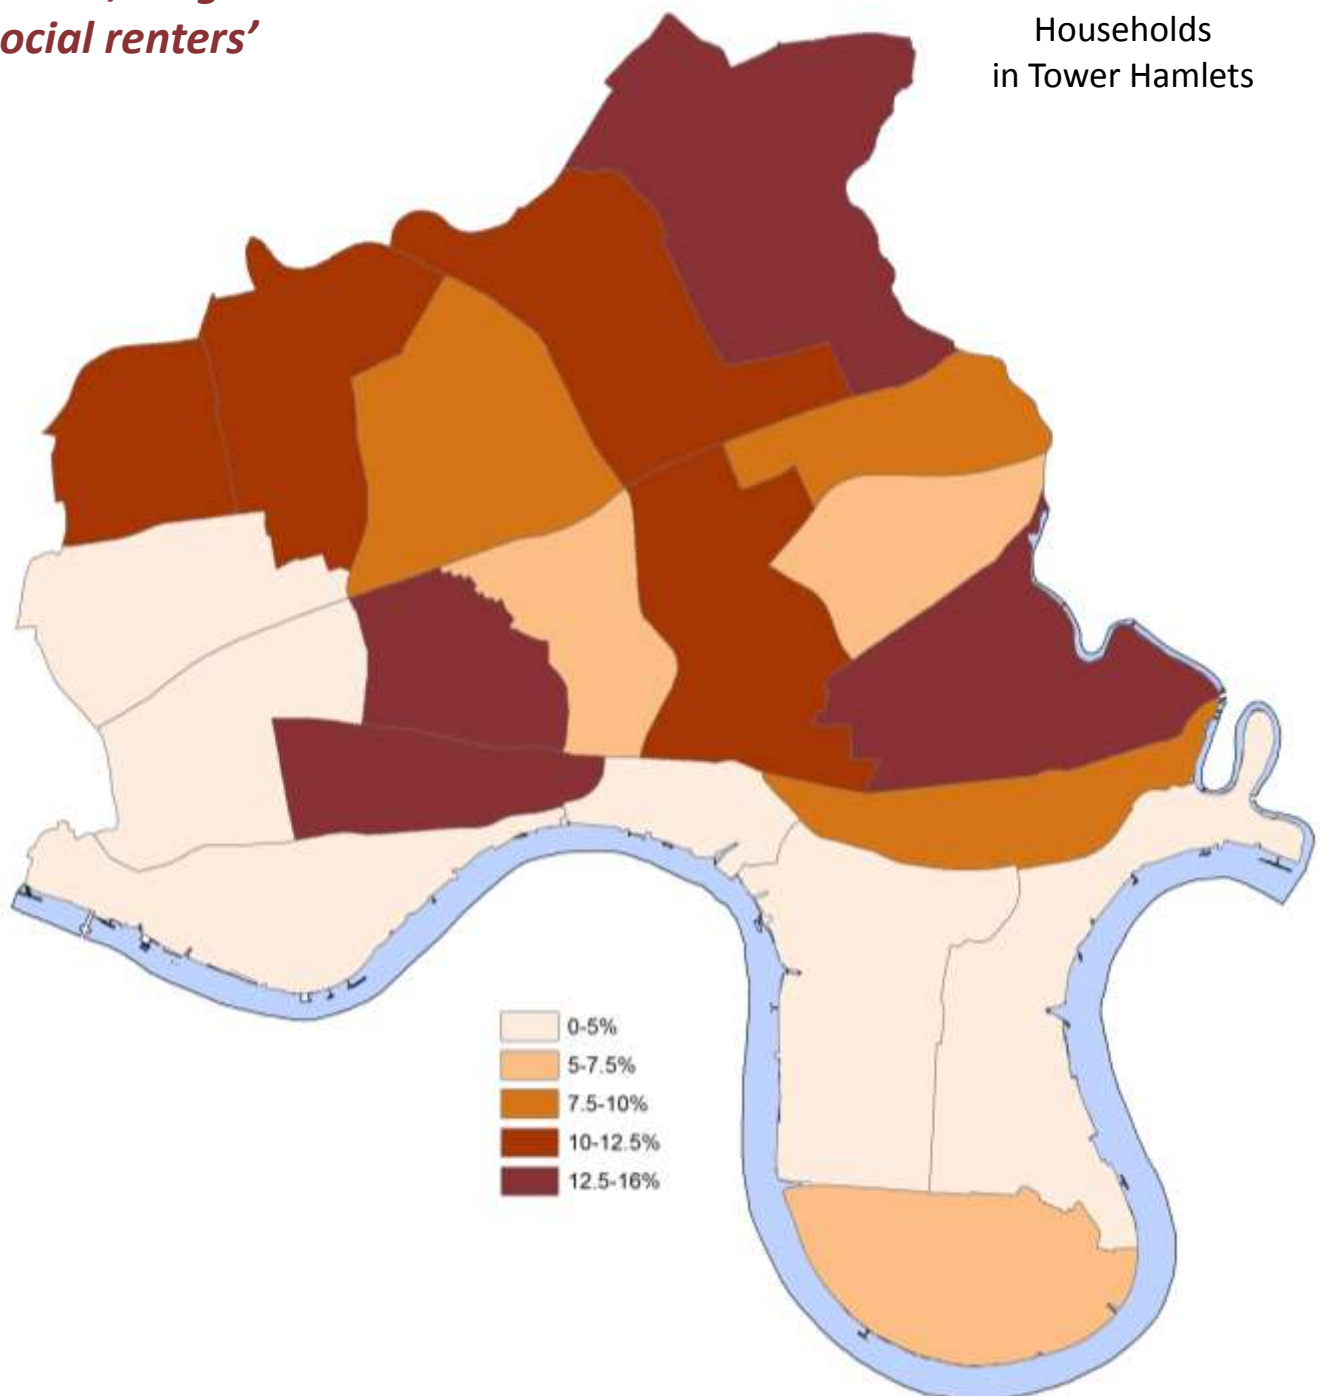

Bars to the right hand side of the UK average show these characteristics are more likely to be present in this group; bars to the left hand side of the UK average show characteristics that are less likely to be present in this group.

social renters’***

10,763 (8.23%)

Households
in Tower Hamlets

© Crown copyright and database rights 2016 Ordnance Survey, London Borough of Tower Hamlets 100019288.

Key Features

- Age 55 – 60
- Single
- Diverse neighbourhoods
- Socially rented accommodation
- Long term residents

Channel Preference

- Mobile phone
- Twitter

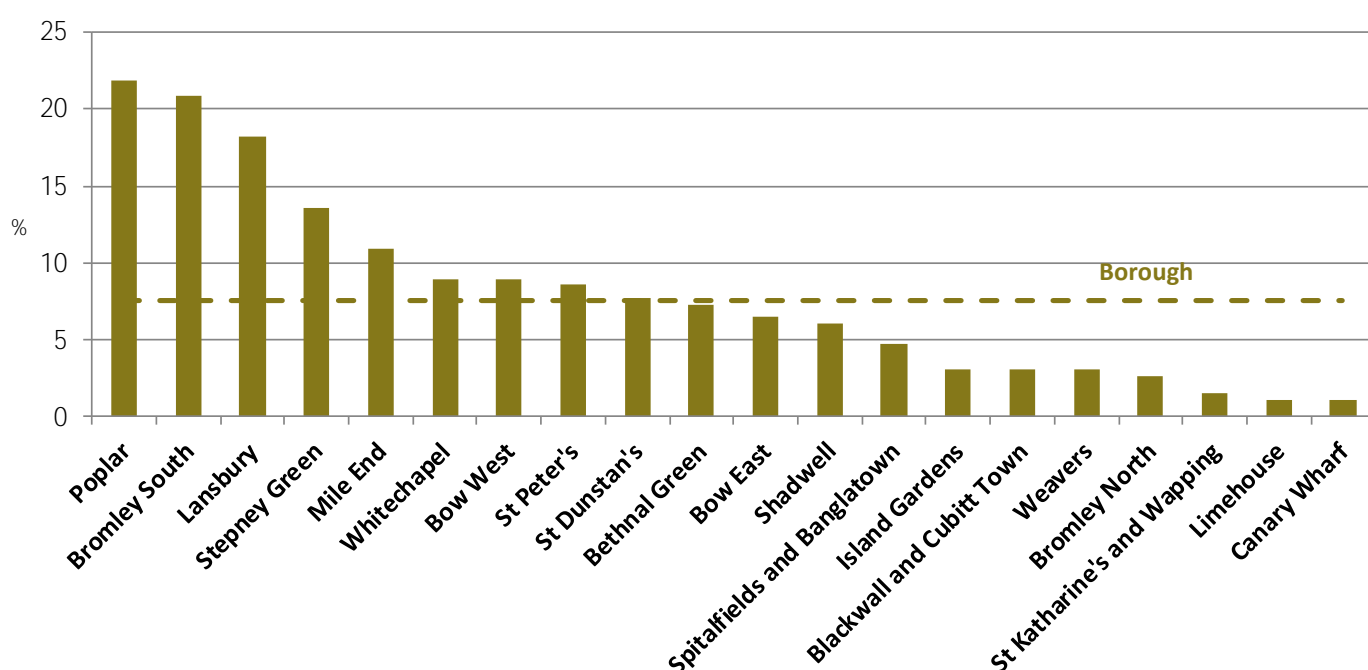

These are young self-starters prepared to move to follow worthwhile incomes from service sector jobs. Comprising singles and home sharers privately renting flats in city centres, particularly London, with its thriving service economy, these young people come from a range of ethnic backgrounds.

This Mosaic type makes up 7.5% of the households in the borough and around 20% of households in Poplar and Bromley South. This type accounts for 14,871 people, 5.51% of the population of the borough in 2014.

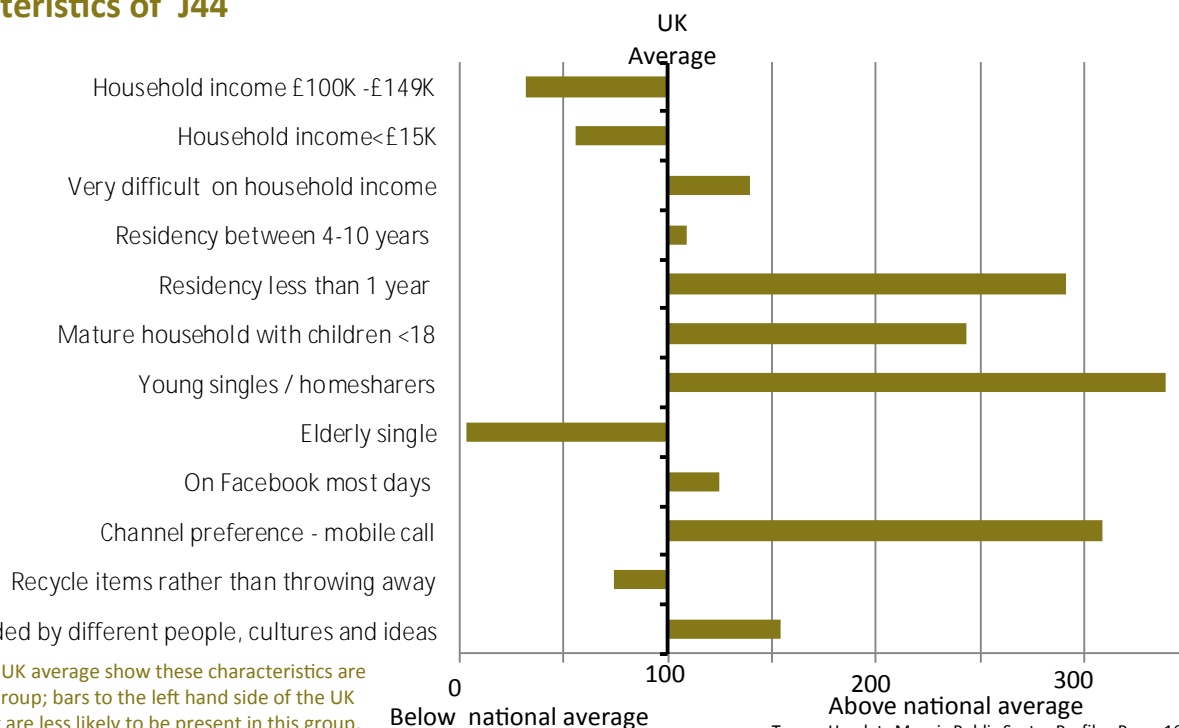

Residents in this type are less likely to be in professional or managerial occupations. They are likely to have a household income of between £30,000 and £70,000 but some may be finding it difficult to manage on this income.

They are knowledgeable about environmental issues, but this knowledge is rarely supported by any real adoption of green behaviours.

% of households in each Ward which are in J44

Selected characteristics of J44

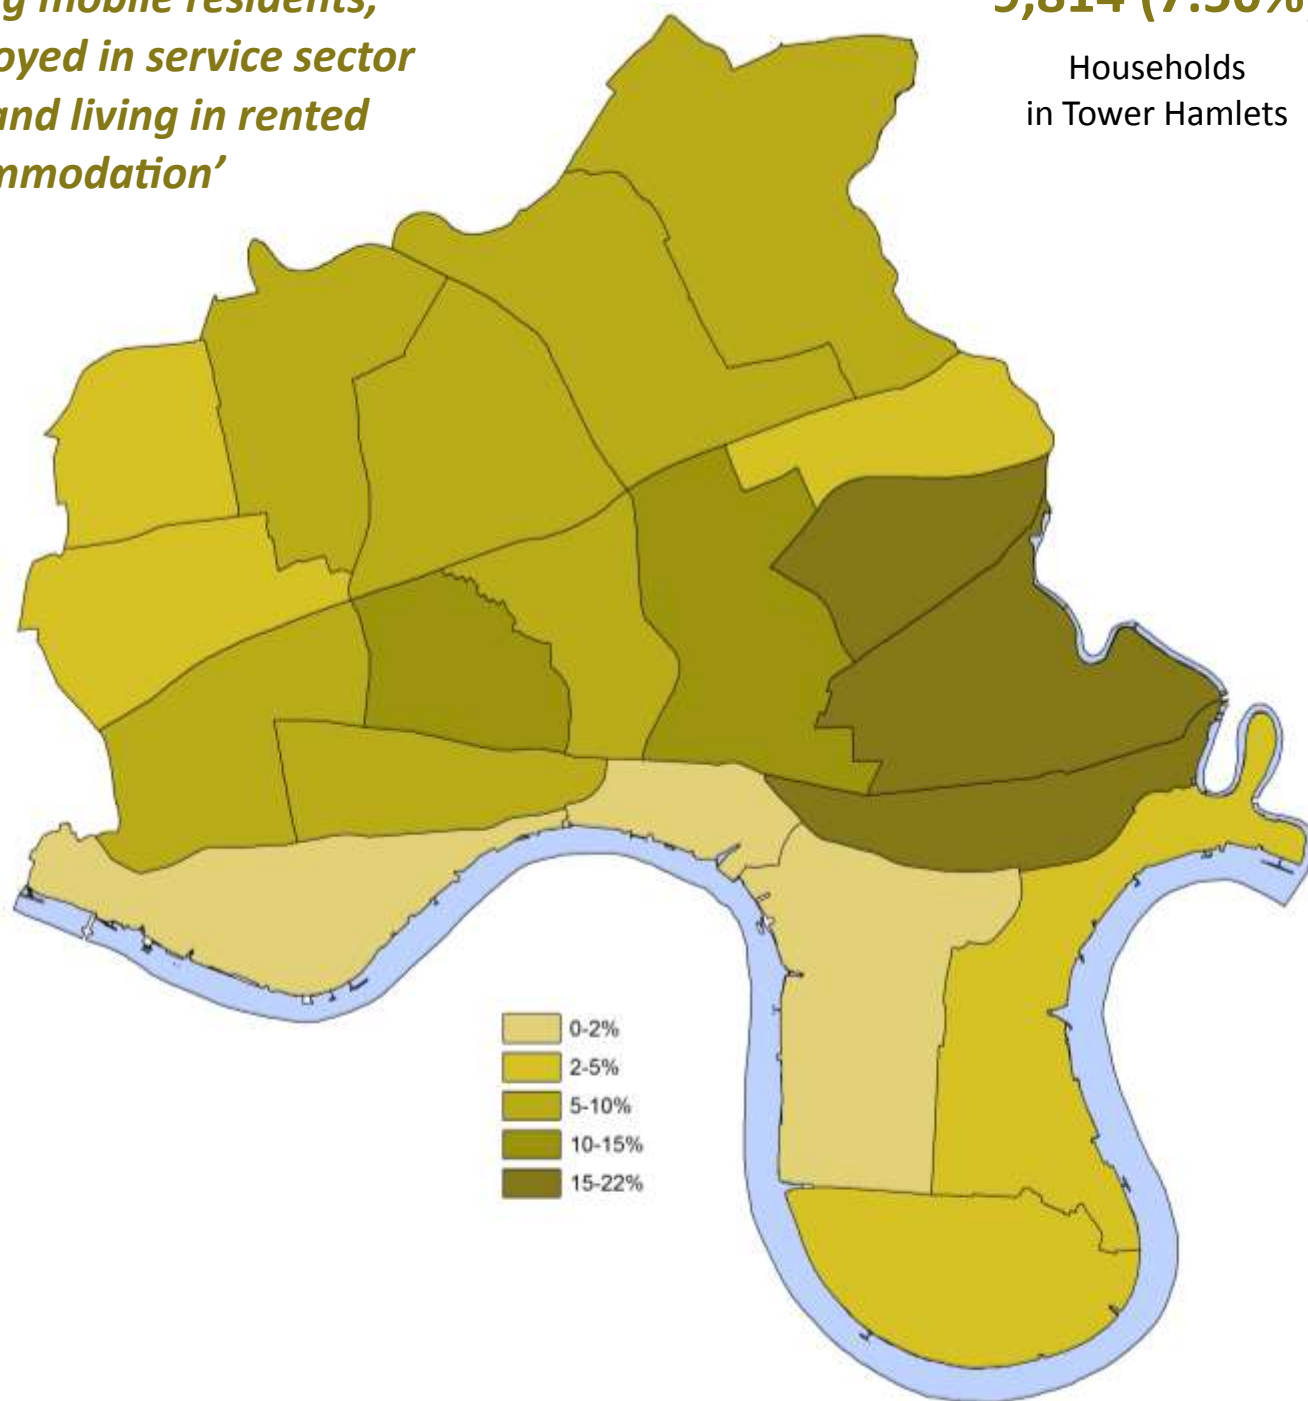

Bars to the right hand side of the UK average show these characteristics are more likely to be present in this group; bars to the left hand side of the UK average show characteristics that are less likely to be present in this group.

Key Features

- Age 26 –35
- Home sharers
- Private rented accommodation
- High diversity
- Highly mobile

Channel Preference

- Mobile phones
- Twitter
- Facebook

Residents in this households type are full-time students, mostly on undergraduate courses, who live in high density student accommodation close to universities and colleges. They live in traditional halls of residence, privately-built student complexes or on residential streets where students dominate the local population.

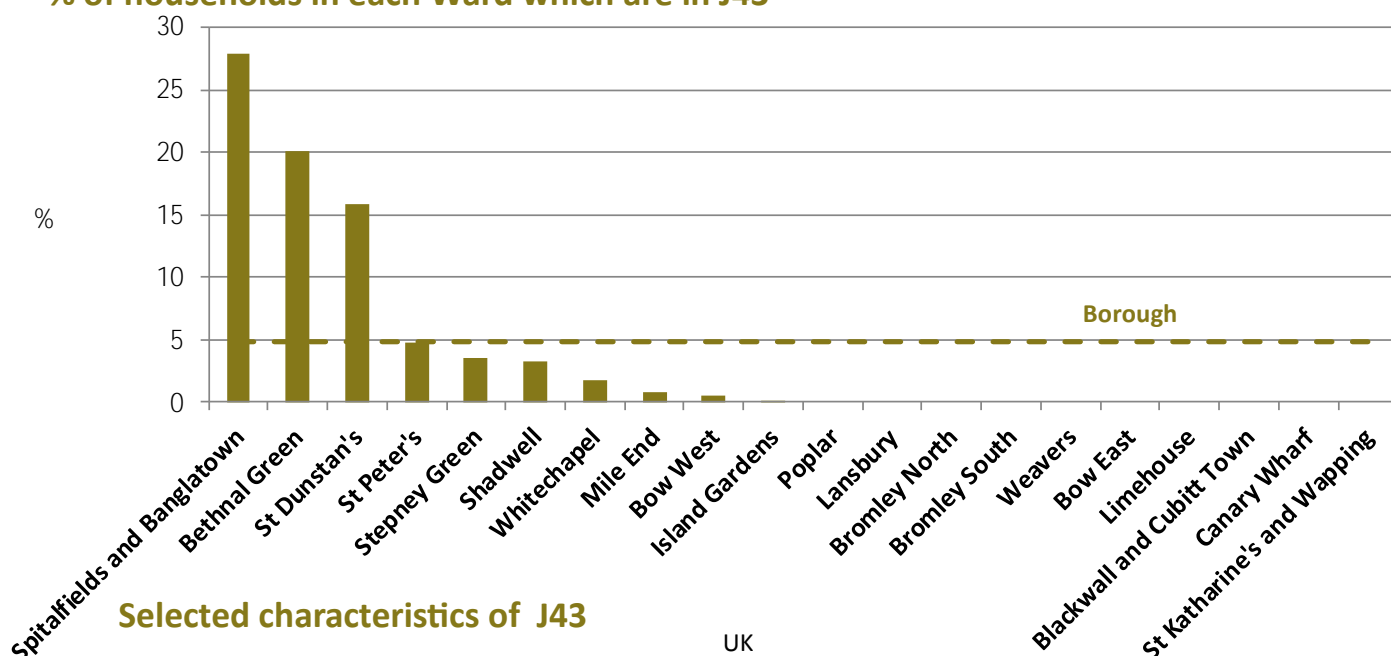

Overall almost 5% of households (For students one household = 1 room) in the borough are in this household type with the highest percentages in Spitalfields and Banglatown (25%) and Bethnal Green (20%). This type accounts for 3,504 people, 1.3% of the population of the borough in 2014.

They are more likely to be aged 18 –24 and have few children and likely to be on low incomes. This household type is highly transient.

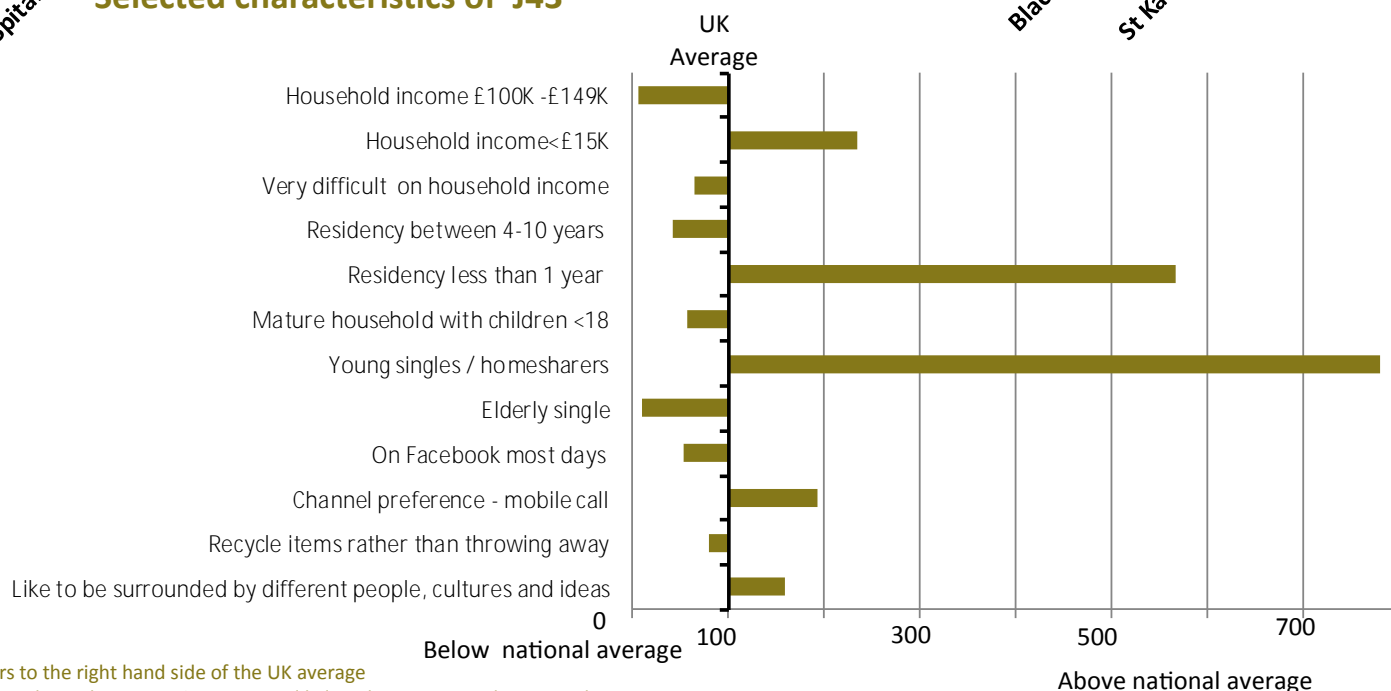

They are most likely to be on Facebook and Twitter everyday.

Many are very environmentally aware. However, although they are concerned with how ethical brands and businesses are, they make less effort than average when it comes to recycling, re-using or reducing energy consumption.

J41

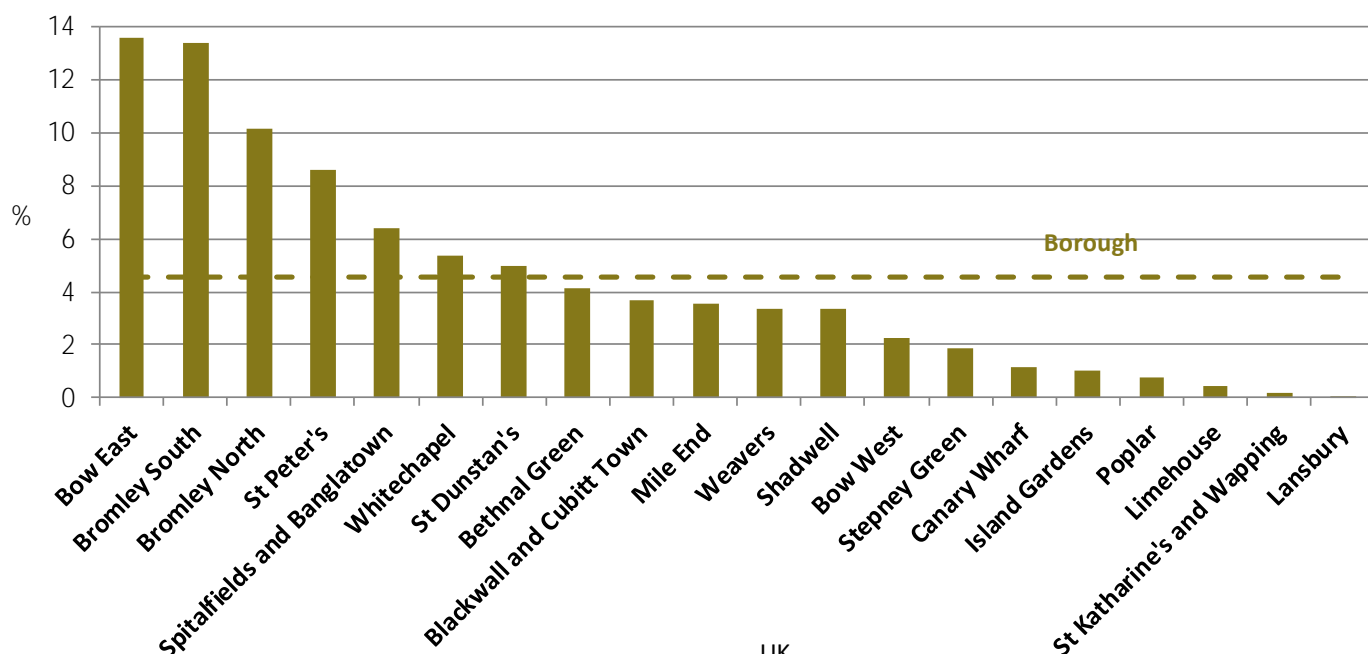

These are entertainment-seeking, smart young singles renting contemporary city centre flats in vibrant locations close to jobs and nightlife. These young professionals, though earning good graduate starter salaries, are not yet ready to buy or settle down. They are more likely to be home sharers in private rented accommodation.

This household type is 4.56% of all households in the borough with the highest percentages in Bow East (13.5%) and Bromley South (13.3%). This type accounts for 10,270 people, 3.8% of the population of the borough in 2014.

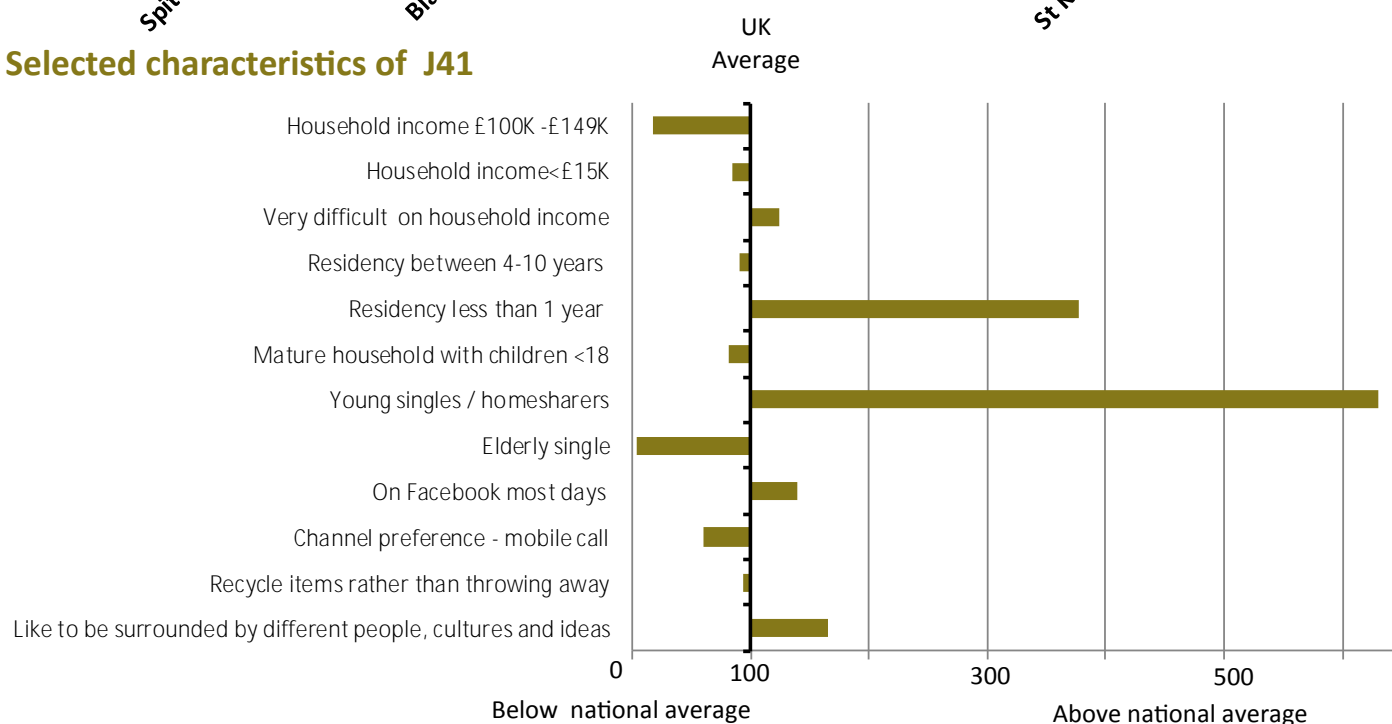

Residents in this group are more likely to be in professional occupations with a household income of £20-£30,000 but are likely to be finding it difficult to survive on their household income. They are less likely to have children. They are more likely to be in social grades C1.

This household type are highly aware of key environmental and ethical issues, but similar to other young household types, this does not always translate into taking action to be green and recycle or reduce.

% of households in each Ward which are in J41

Selected characteristics of J41

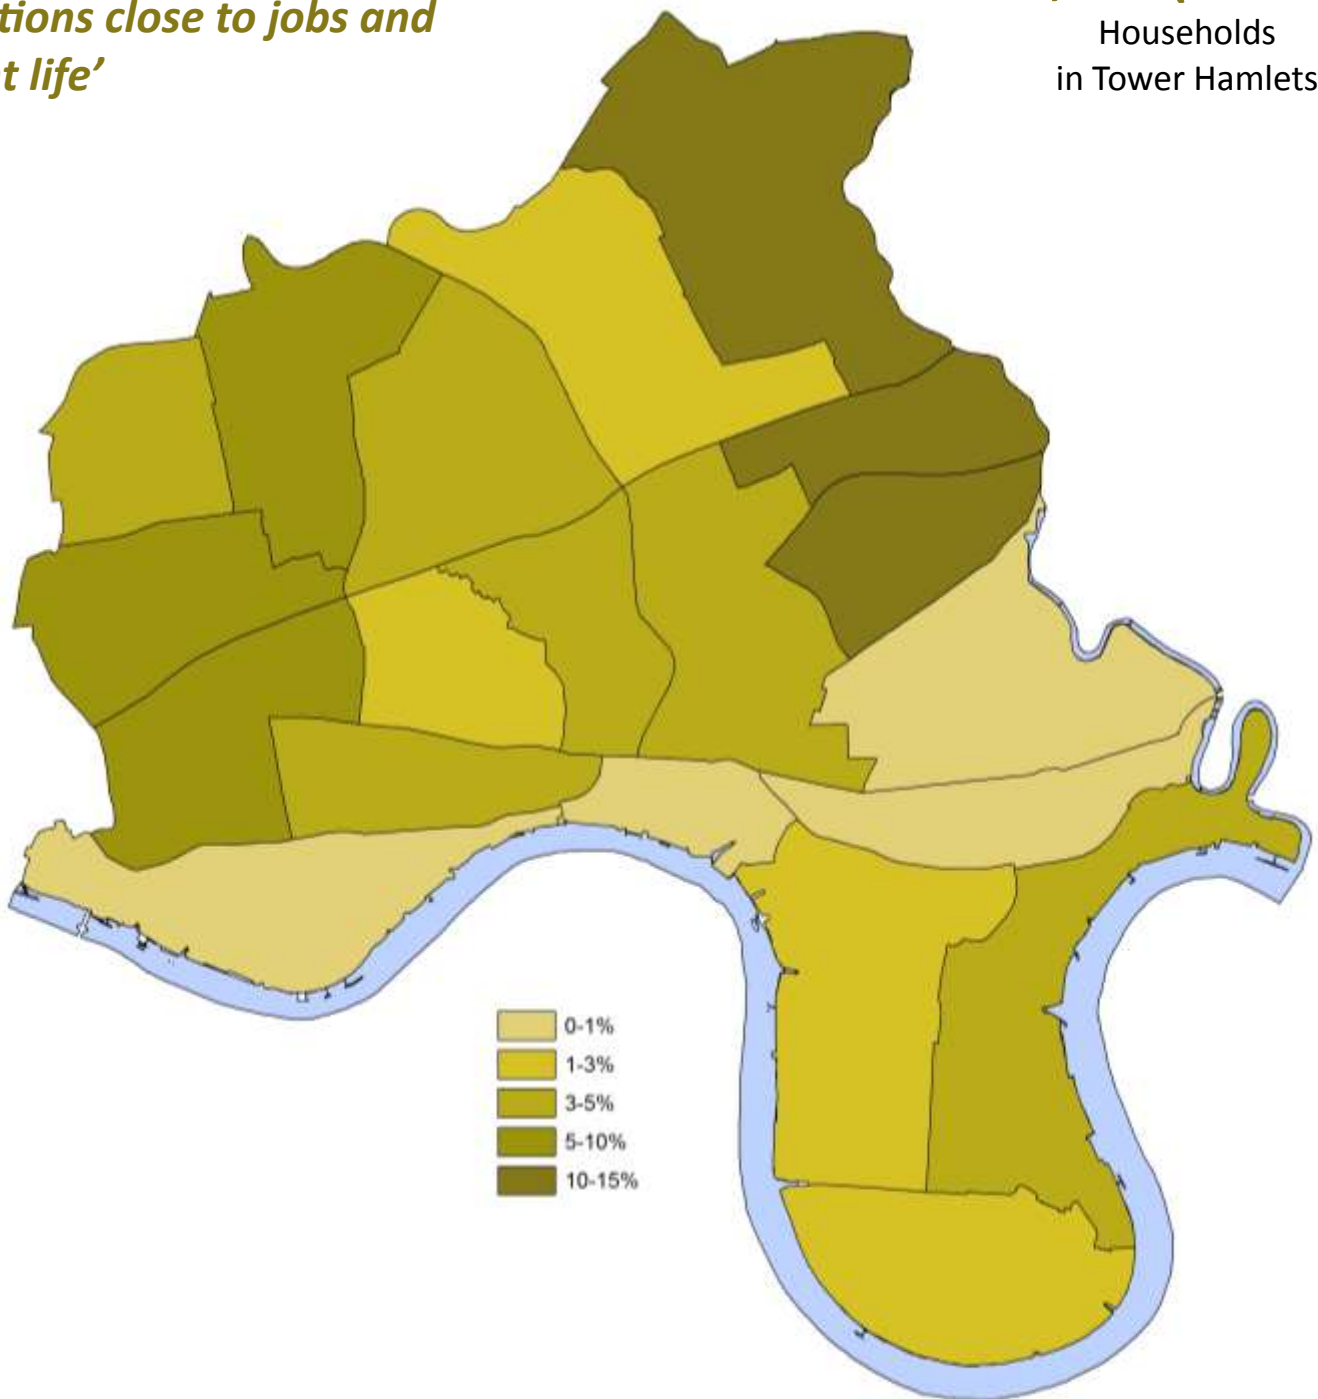

Bars to the right hand side of the UK average show these characteristics are more likely to be present in this group; bars to the left hand side of the UK average show characteristics that are less likely to be present in this group.

These are high status professional families owning expensive and elegant homes alongside equally successful neighbours in upmarket and accessible inner suburbs. Here they are able to enjoy city life in style and comfort.

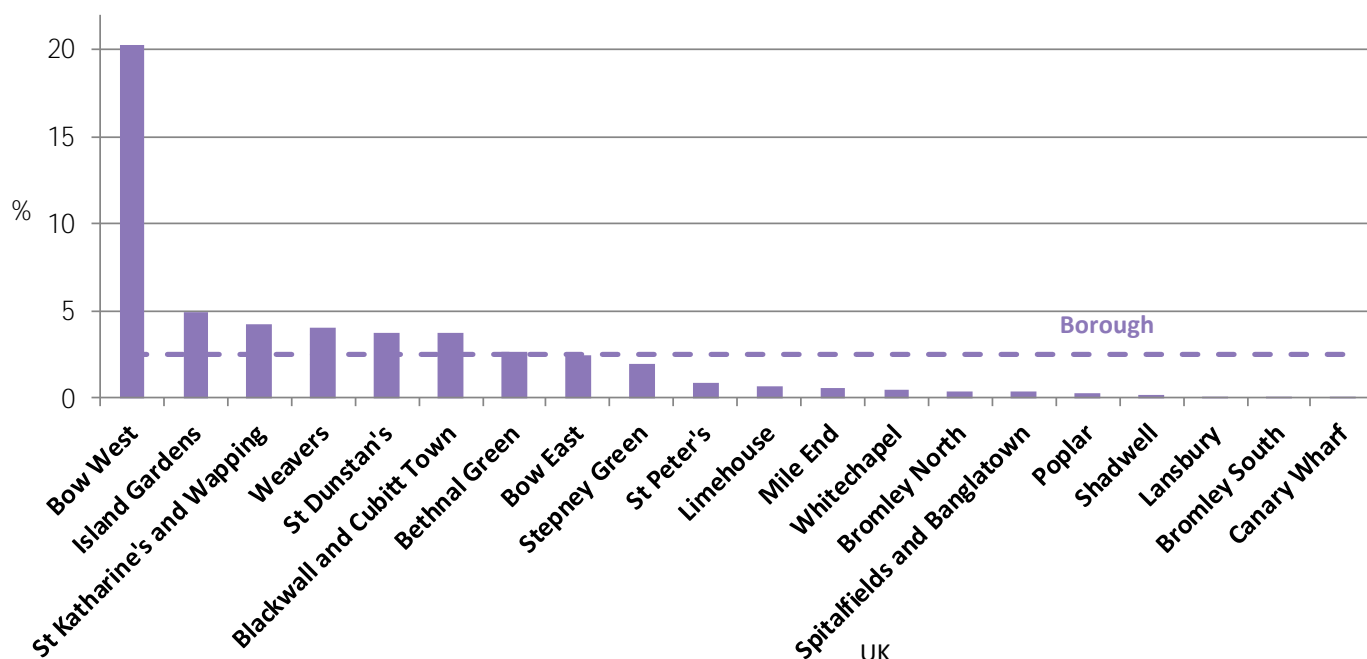

This type make up 2,5% of the households in the borough. However, they make up 20% of the households of Bow West. This type accounts for 7,385 people, 2.74% of the population of the borough in 2014.

They are very likely to have high household income (above £150,000) and likely to be comfortable on that income. They are very likely to be higher professional and managerial occupations and be social grade A.

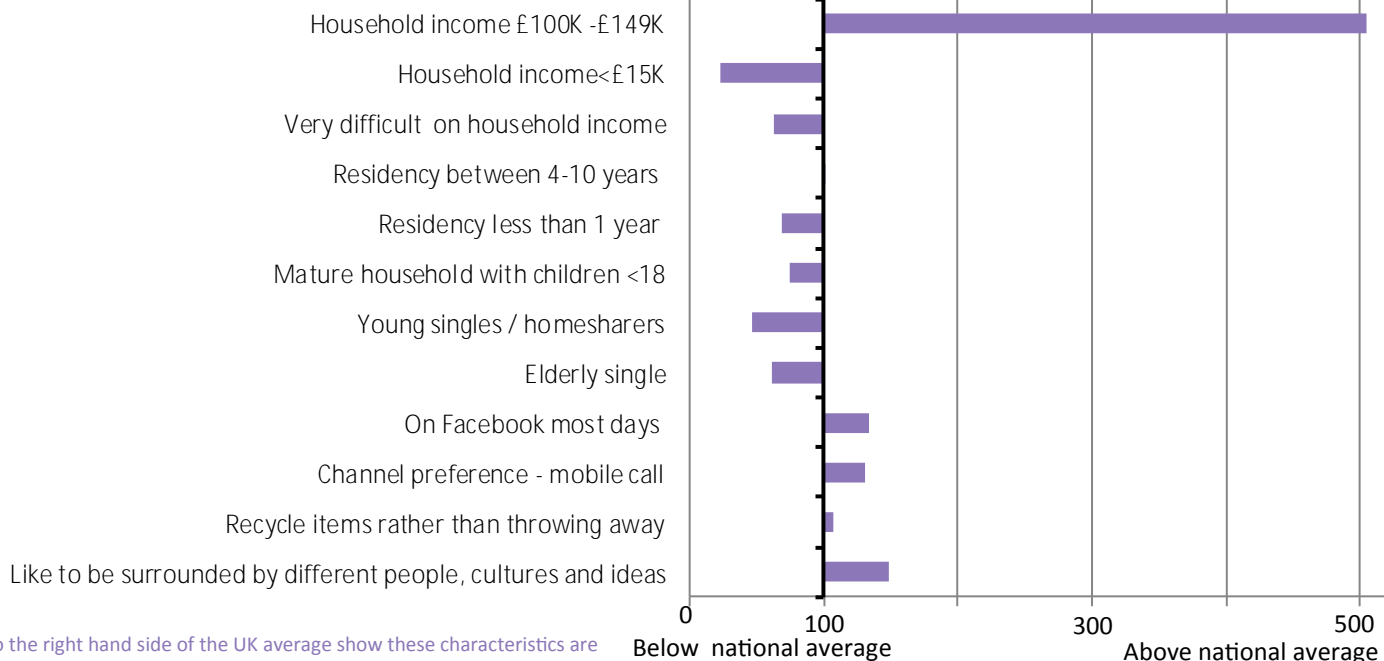

They are more likely to be older people but still under 65 with no children under 18 living within the household.

They are aware of key environmental issues, are proactive in recycling and reducing energy use and often choose products, services and brands based on ethical considerations.

% of households in each Ward which are in C13

Selected characteristics of C13

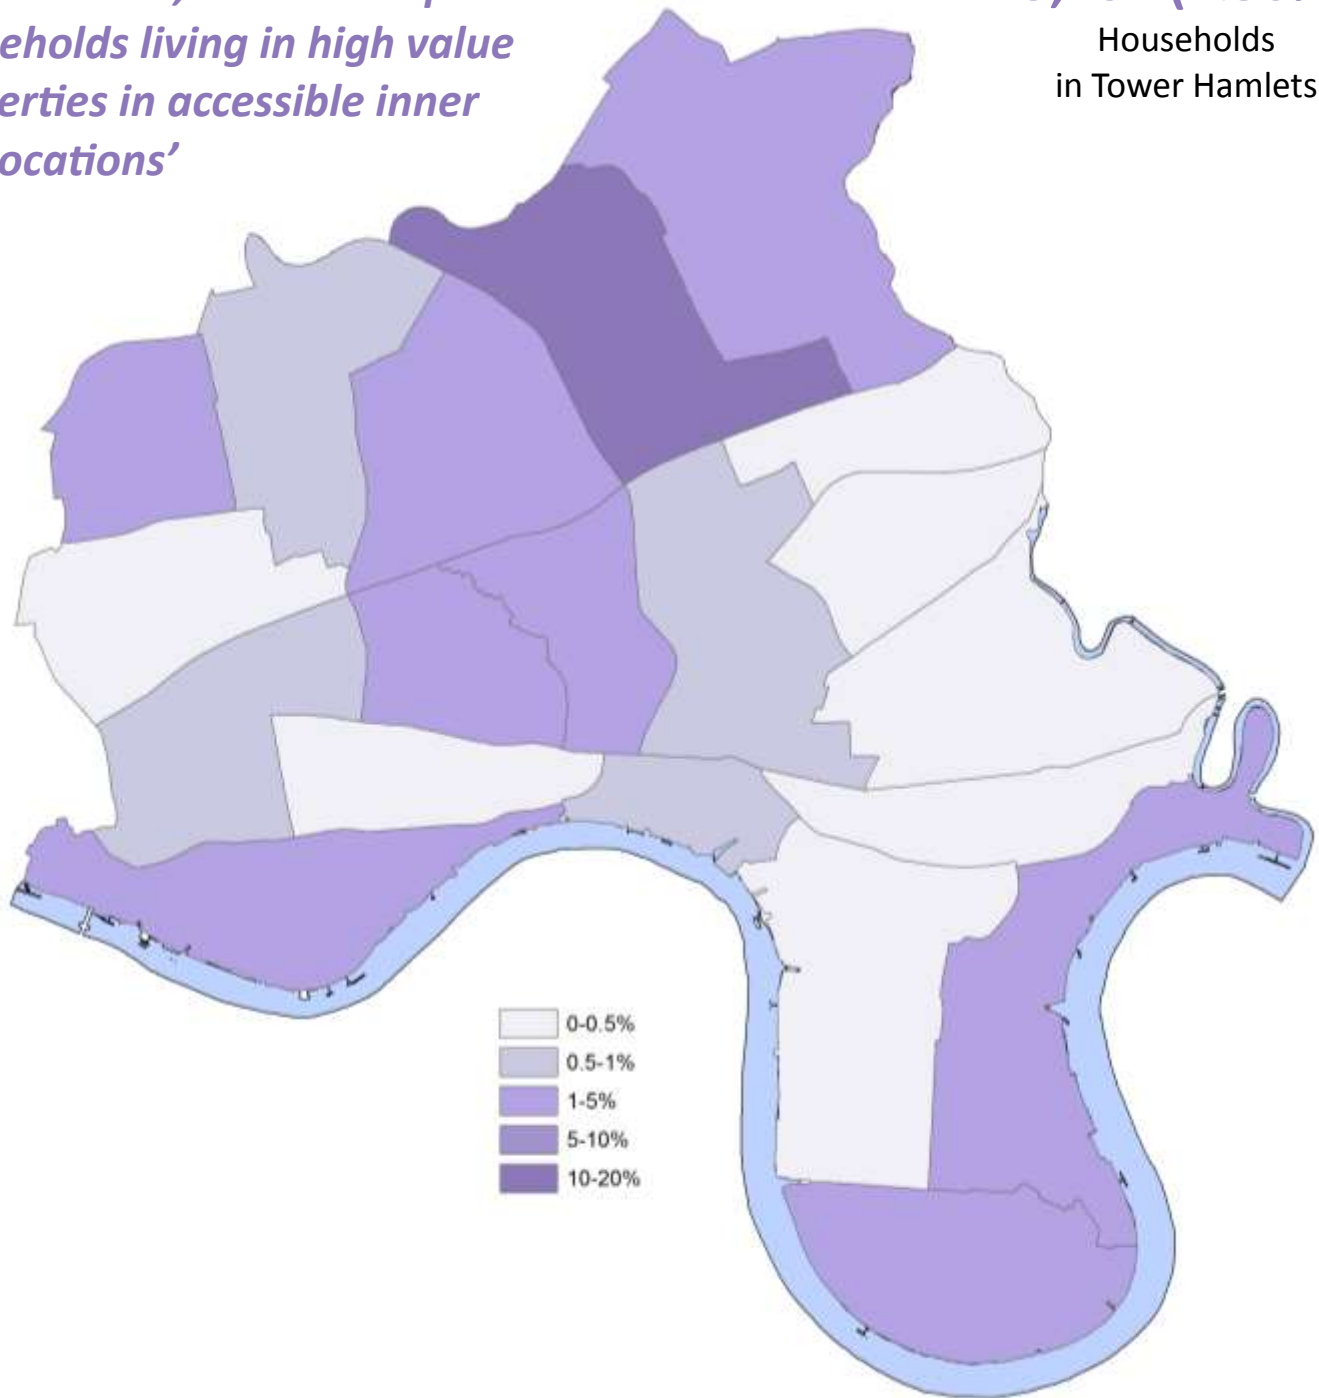

Bars to the right hand side of the UK average show these characteristics are more likely to be present in this group; bars to the left hand side of the UK average show characteristics that are less likely to be present in this group.

H33

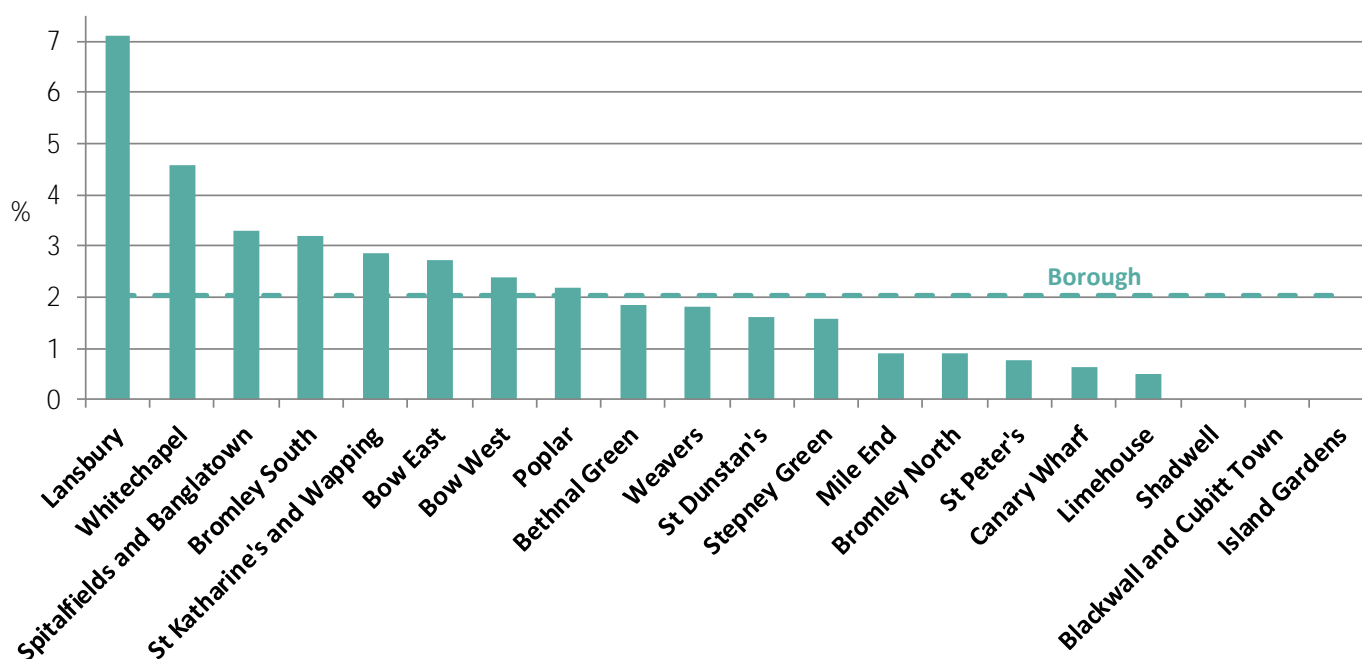

These are residents who live in a brand new home with a newly designated postcode on a development that will often include a mix of housing styles. These people are often younger and single but all on these new developments have recently moved in.

This type accounts for 2.05% of households in the borough rising to 7% in Lansbury. This type accounts for 8,426 people, 3.12% of the population of the borough in 2014.

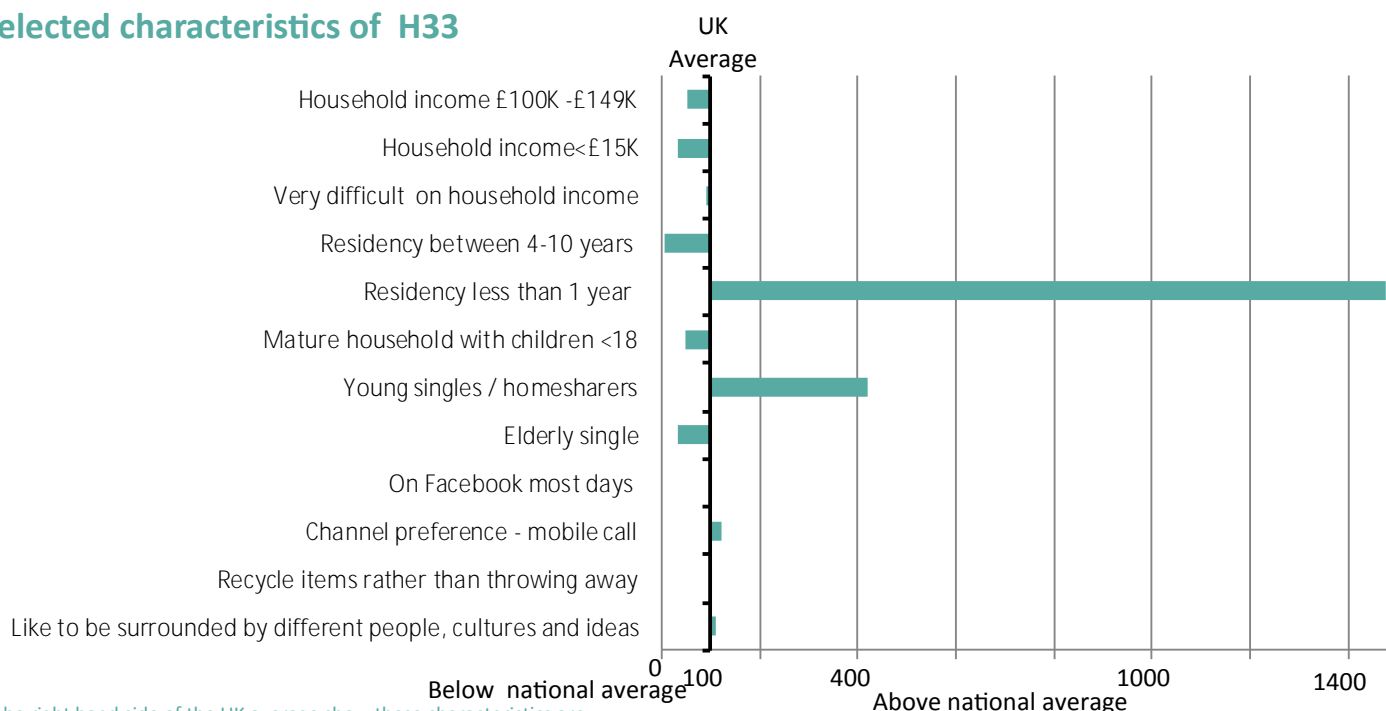

They are more likely to be aged under 35 and more likely to have a household income of £30-50,000 and to be in Social grade C2.

While levels of understanding around environmental issues are average, they are greener than many. They are the most likely to say they recycle items rather than throwing them away.

% of households in each Ward which are in H33

Selected characteristics of H33

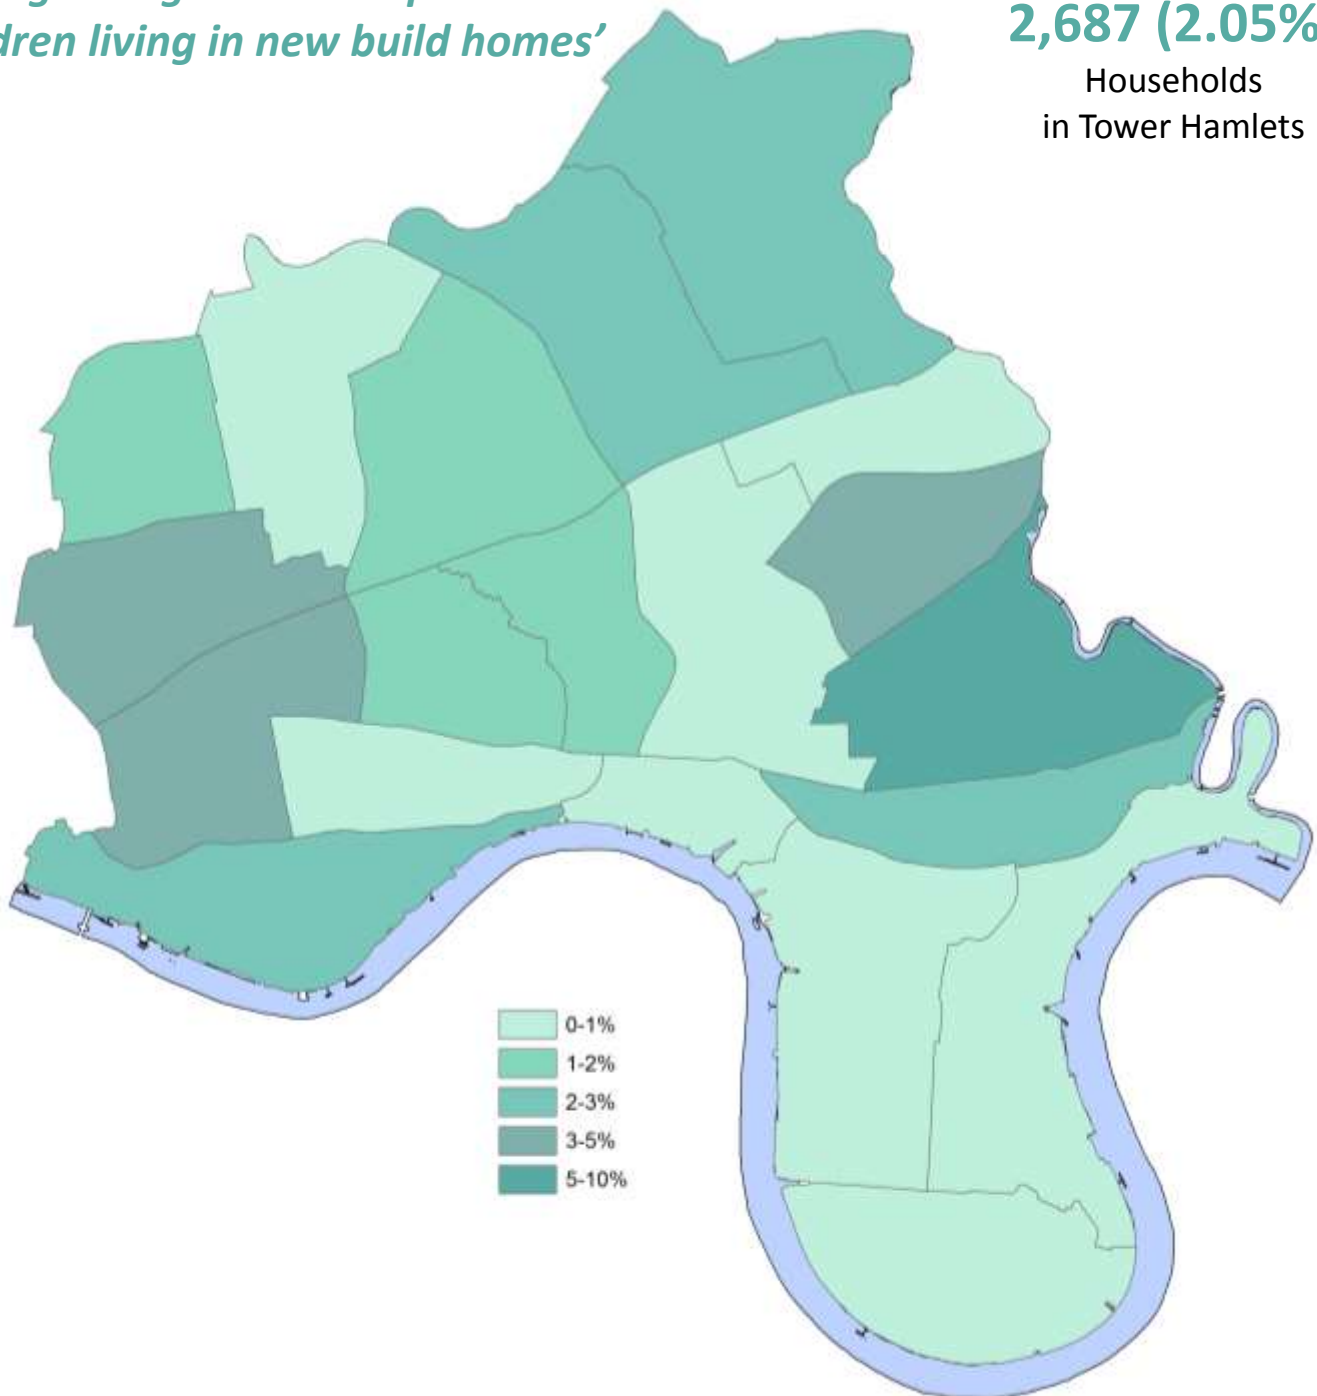

Bars to the right hand side of the UK average show these characteristics are more likely to be present in this group; bars to the left hand side of the UK average show characteristics that are less likely to be present in this group.

These are thriving families with good incomes, enjoying comfortable lifestyles living in multi-cultural city suburbs where there are high proportions of people of South Asian backgrounds. Due to the location, housing is expensive in these urban residential areas.

This household type accounts for 1.35% of households in the borough with St Dunstan's at 4.5% and Island Gardens at 4% having the largest proportions. This type accounts for 3,334 people, 1.24% of the population of the borough in 2014.

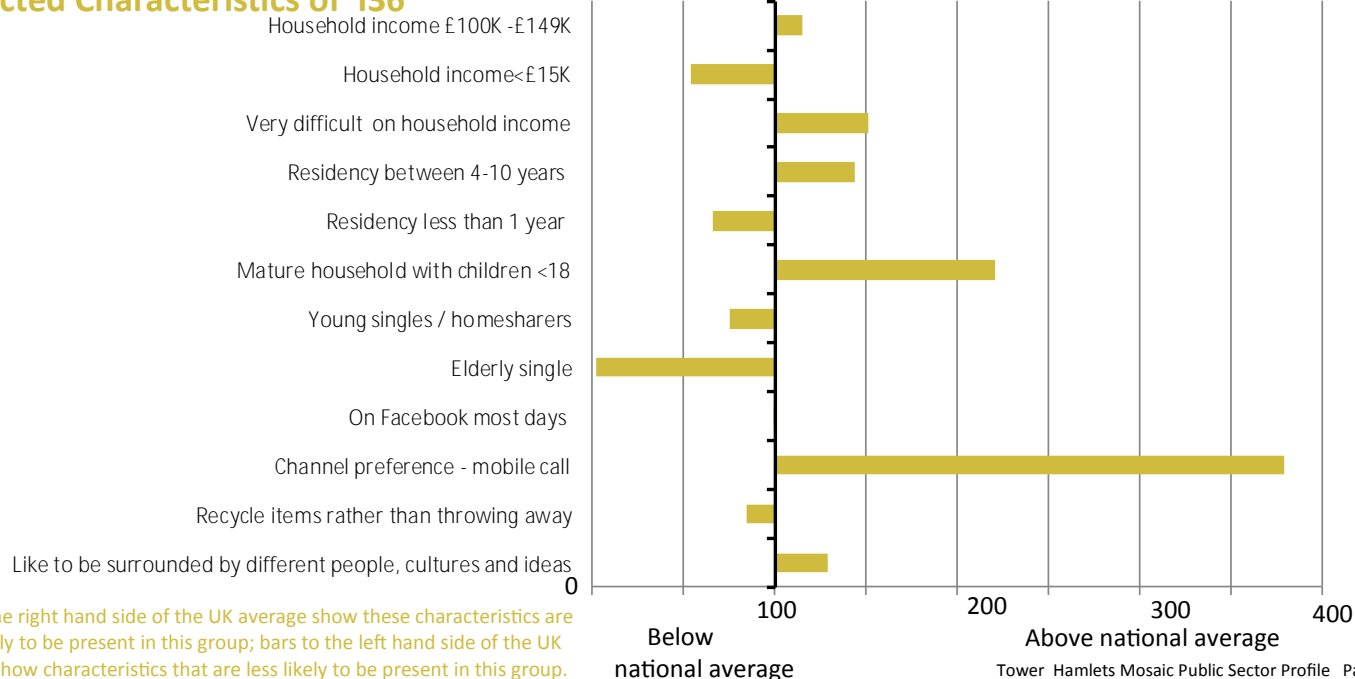

Residents in this household type are likely to have a household income between £30,000 and £99,000 but some may be finding it difficult on their household income. They are less likely to be in professional occupations and more likely to be self-employed. They are likely to be mature households with children under 18 and have lived in their accommodation for a number of years.

They are most likely to be on Facebook and Twitter every day and to use mobile phones as a means of communication. They do have a reasonable understanding of environmental issues, but make comparatively little effort to be environmentally friendly by recycling.

These are people living in high rise council flats in urban locations, both single people and a few home sharers, where income levels are low and levels of need are high.

This household type make up 779 (0.6%) of households in the borough and over 7% of the households in Bromley North. This type accounts for 3,080 people, 1.14% of the population of the borough in 2014.

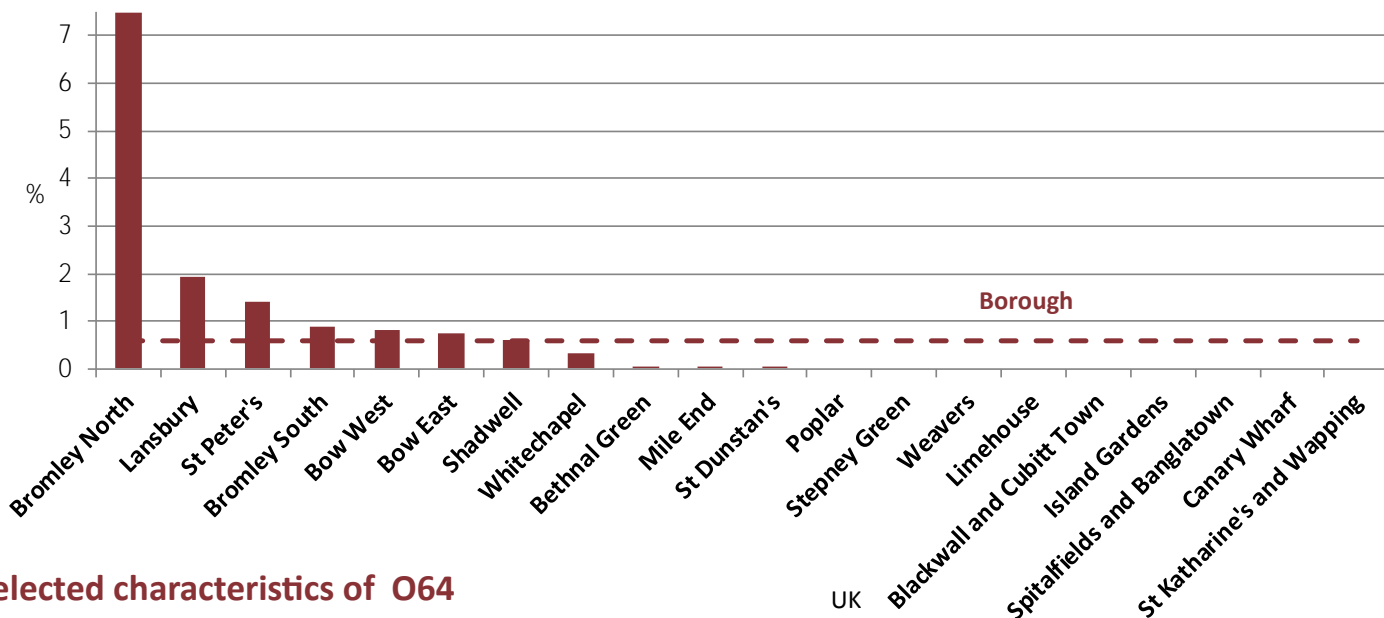

They are more likely to be on low incomes (<£15,000) and to be finding it difficult on their household income.

They are less likely to be in professional and managerial occupations. They are far more likely to be in routine occupations and more likely to be in Social grade E.

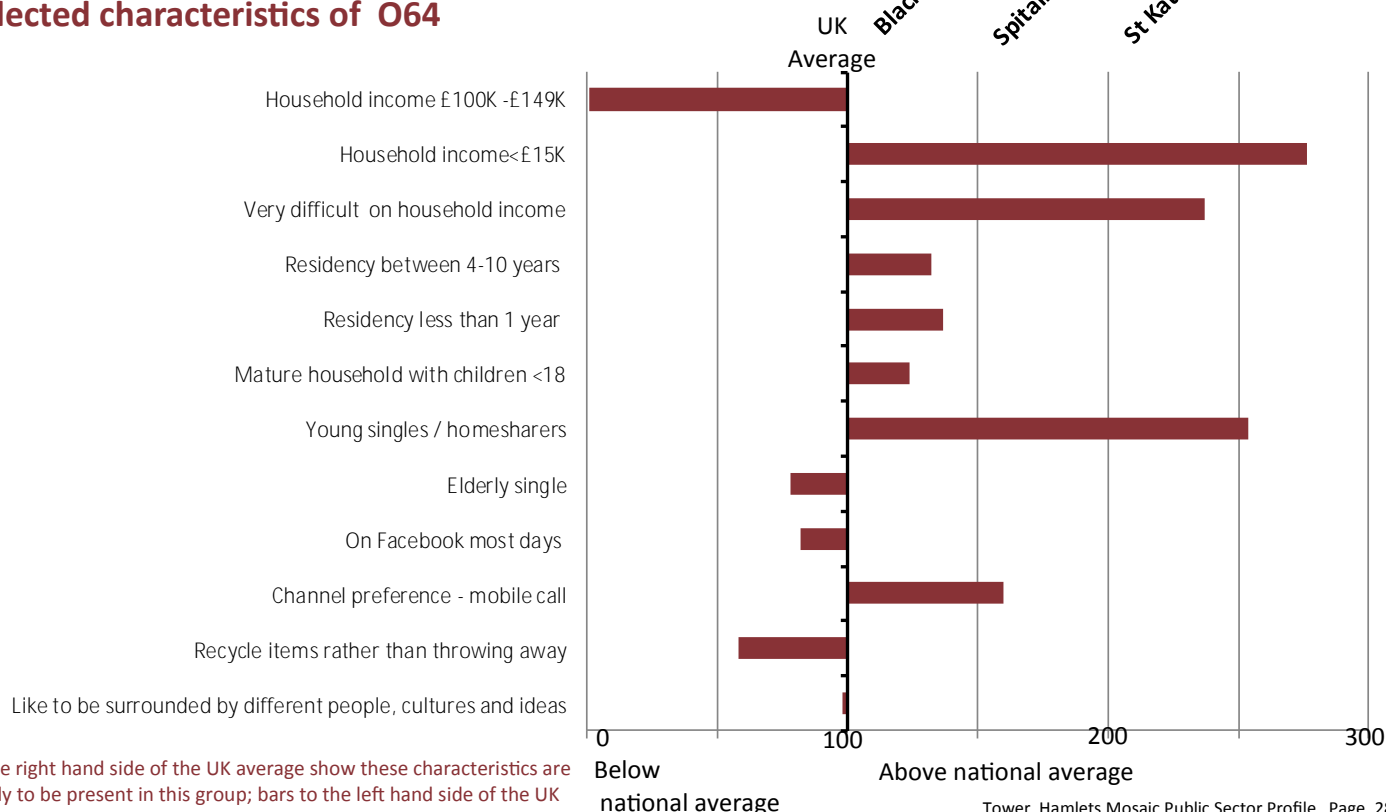

They are less likely to have children and more likely to be single home sharers.

This is one of the least environmentally aware or green types.

Very difficult on household income

Household income £100K -£149K

Recycle items rather than throwing away

The charts above show the selected characteristics by Mosaic type.

Deliberately left blank

Appendix 4 —Social Grade

The social grade characteristic in Mosaic Public Sector is based on the following question

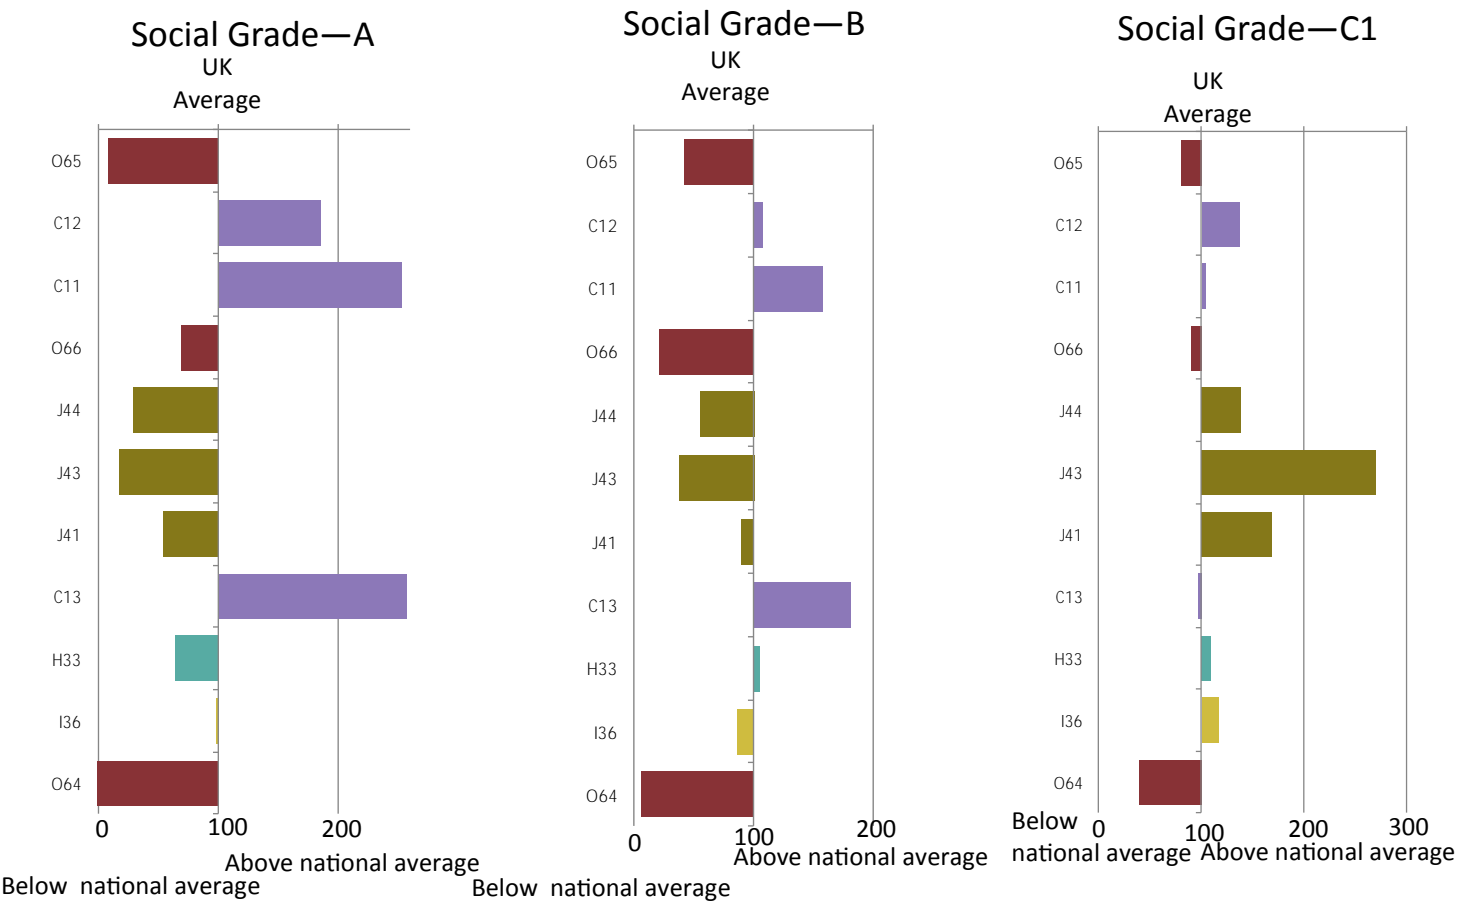

‘From the following, which best describes your professional status’.

The groups are defined as:

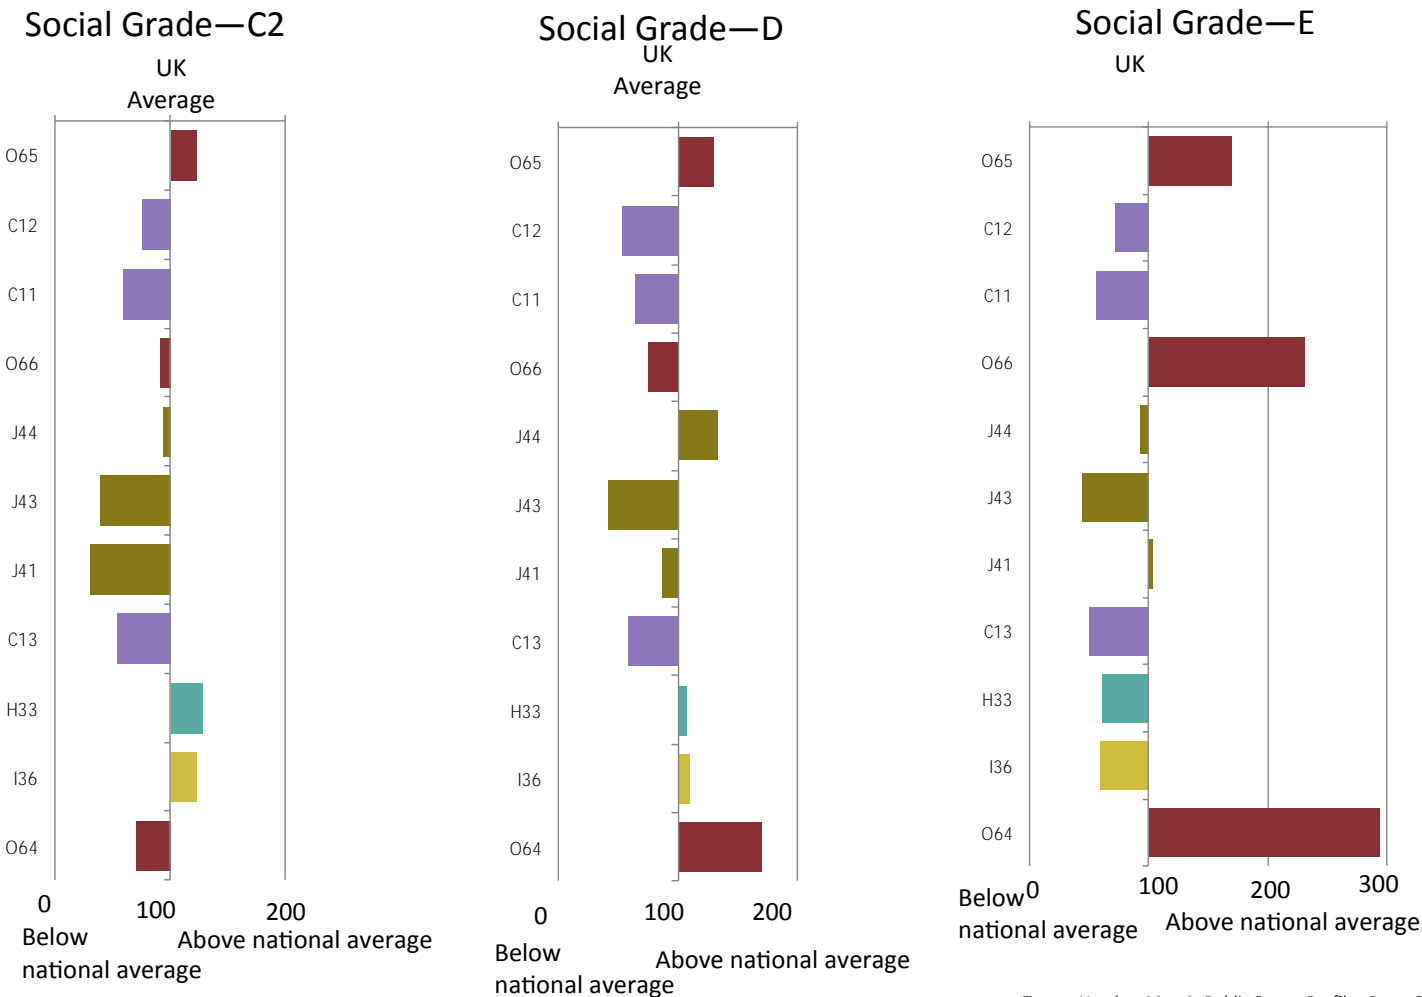

Grade	Social Class	Income earner's occupation
A	Upper middle class	Higher managerial, administrative or professional
B	Middle class	Intermediate managerial, administrative or professional
C1	Lower middle class	Supervisory or clerical and junior managerial, administrative or professional
C2	Skilled working class	Skilled manual workers
D	Working class	Semi-skilled and unskilled manual workers
E	Non-working	Casual or lowest grade workers, pensioners, and others who depend on the welfare state for their income

Appendix 4—Social Grade

The charts below shows social grade for each Mosaic type.

The bars to the right hand side of the UK average show these characteristics are more likely to be present in this type; bars to the left hand side of the UK average show characteristics that are less likely to be present .

Appendix 5—Mosaic Public Sector groups and types

Mosaic Public Sector groups

Group/Type	Group/Type Name	One-Line Description	UK Household (%)	UK Population (%)
